Getting Started

Introduction	1-2
The Purpose of this Manual	1-2
Contents of the Manual	1-2
Supplemental Manuals	1-2
Technical Assistance	1-2
Chapters	1-3
How the OP-1312 Works	1-4
The Interaction with Ladder Logic	1-5
Using the Setpoint/Display Panel...5 Easy Steps	1-6
Step 1: Prepare Your Field Point Labels	1-6
Step 2: Install the Panel	1-6
Step 3: Load the OP-WINEDIT Software	1-6
Step 4: Configure the Panel to Work with your CPU	1-6
Step 5: Write the Ladder Logic	1-6

Installation and Specifications

Preparing the Setpoint/Display Labels	2-2
Applying Text to Each Label	2-2
Template for Creating Labels	2-3
Panel Specifications	2-4
Physical Specifications	2-4
Environmental Specifications	2-4
Operating Specifications	2-4
Dimensions for Mounting	2-5
Power and Cabling Requirements	2-6
What Are Your Application Needs?	2-6
Choosing your Connecting Cables	2-7
Connecting Cable Details	2-8
Connecting Cable	2-8
Connecting a Power Supply	2-9
Power Supply Connections	2-9
Multi-panel Power Supply connection	2-9
Preparing the Panel for Configuration	2-10
Selecting Configuration Mode	2-10
Configuration Cable	2-10
Preparing the Panel for Communications	2-11
Assigning an Address	2-11
How to Set the Address	2-11
OP-9001 Multi-Panel Configurations	2-11
The Termination Resistor	2-11

Configuring Your Operator Panel

Preparing for Configuration	3-2
Configuration	3-2
OPEditor Software	3-2
More about OPWIN-EDIT	3-3
The HELP System	3-3
System Requirements	3-3
How to Configure Your Panel	3-4
Step 1	3-4
Step 2	3-4
Step 3	3-4
Step 4	3-4
Step 5	3-5
Step 6	3-6
Step 7	3-6
Step 8	3-6
Step 9	3-6
Step 10	3-6

Applying Ladder Logic

General Concepts	4-2
Base Register Addresses for PLCDirect Memory	4-2
Memory Mapping	4-3
Addressing Conventions	4-3
Force Setpoint Registers	4-5
Using the Panel with PLCDirect	4-6
Writing Display Data to the PLC Memory	4-6
Forcing Setpoint Data to the PLC Memory for the DL205/DL405	4-7
Forcing Setpoint Data to the PLC Memory for the DL305	4-8
Using the Panel with an Allen-Bradley PLC	4-9
Writing Display Data to the PLC Memory	4-9
Forcing Setpoint Data to the PLC Memory	4-10
Bit Manipulation in the Force Flag Register	4-11
Controlling Individual Bits	4-11
Bit-of-Word	4-11
Internal Relays	4-12
