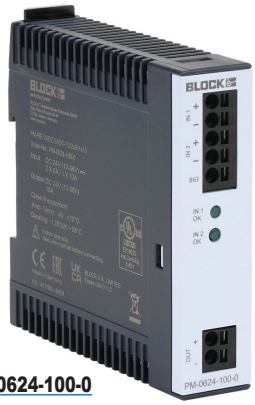
PM-0624-100-0 Redundancy Module



PM-0624-100-0

The PM-0624-100-0 redundancy module used with two BLOCK matched power supplies creates redundancy to help prevent costly downtime due to power supply failure. The PM-0624-100-0 decouples the outputs of the two connected power supplies so that in case of failure, one power supply cannot overload the other.
