Battery Specifications

A battery is included with the Do-more CPU and is used to retain the Time and Date along with any Tagname values that are set up as retentive. It is recommended that the battery be replaced once every five years or when one year of cumulative OFF time has been exceeded.

Up to two hours is allowed to change out a battery without loss of data.

CPU Modules

Ethernet Expansion I/O

With Do-more Designer Software version V1.1 and newer, the [H2-DM1E](#) CPU's built-in Ethernet port can be configured as an Ethernet Expansion I/O master. Much like the [H2-ERM100](#) module, the Ethernet Expansion I/O feature allows expansion beyond the local chassis to slave I/O using the onboard high-speed Ethernet link.

The onboard Ethernet port can support up to 16 slave devices. The slave I/O modules supported are:

- [H2-EBC100](#)
- [T1H-EBC100](#) (Terminator I/O)
- [GS-EDRV100](#) (GS Drives)

The Ethernet Expansion I/O network uses Category 5 UTP cables for cable runs up to 100 meters (328 ft.) with extended distances achieved through Ethernet switches.

It is highly recommended that a dedicated network be used with the Ethernet Expansion I/O feature. Ethernet Expansion I/O networks and ECOM/office networks should be isolated from one another to prevent network delays.
