

Drive Couplings

Drive Couplings Overview

Rotating shaft-driven mechanical components are commonly used in all forms of machinery that perform the various processes and functions of modern industry. Perfect alignment of shafts and rotating components is desired, but it is nearly impossible to build a real-world machine in which adjacent shaft ends align perfectly.

Adjacent shafts can be misaligned in 3 orientations, angular, parallel and axial, see figure below. Misalignment will place stresses on shafts and related parts of the assembly such as bearings, which can result in early failure of both.

Drive couplings can be used to compensate for shaft misalignment, whether the misalignment is an intentional or an unintentional part of the design. When designing or modifying a system, there are essential factors to consider for choosing the correct couplings for the application.

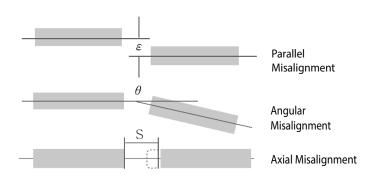

Design/Selection Factors:

(Refer to the specification tables herein for the particular specifications of each type of drive coupling.)

- <u>RPM:</u> For higher rpm applications, choose Jaw/Spider or Beam-Style Servo couplings. For lower rpm, consider Double-Loop or Oldham couplings.
- Torque: Consider the torque requirements of the application, and the torque specifications of the different drive coupling types. peak torque generally occurs at start-up, operating torque at steady-state operation, and reversing or braking torque during rapid acceleration or deceleration or direction changes.
- <u>Backlash</u>: Backlash is a measurement of the positional accuracy of the coupling, which is important for reversing and/or motion control applications. Zero backlash is ultimately desirable, but more expensive than necessary for low-precision applications.

For high-precision applications, choose Beam-Style Servo or Oldham couplings. For applications requiring less precision, consider Jaw/Spider or Double-Loop couplings.

 <u>Misalignment:</u> Some degree of angular, axial, or radial misalignment/displacement between shafts is almost unavoidable. Drive couplings can compensate for this misalignment.

| Coupling Type Comparisons | | | | | | | | |
|-----------------------------|----------------|-----------------|-----------------|---------------------------|--|--|--|--|
| Coupling Type | Jaw / Spider | Double Loop | Oldham | Beam-Style Servo | | | | |
| Representative Photo | | | | | | | | |
| Purpose | most common | light duty | general purpose | high performance & torque | | | | |
| Hub Material | aluminum | stainless steel | aluminum | 416 stainless steel | | | | |
| Center Material | polyurethane | Hytrel™ | Delrin™ | 420 stainless steel | | | | |
| Mounting Method | clamp | set screw | clamp | set screw | | | | |
| Electrical Isolation | yes | yes | yes | no | | | | |
| Backlash | varies | varies | zero | zero | | | | |
| Misalignment Capacity | ++ (axial) | +++ | ++ | + | | | | |
| Breakable "Mechanical Fuse" | no (fail safe) | no | yes | no | | | | |
| Relative Price | \$\$ | \$\$ | \$ | \$\$\$ | | | | |

Oldham Drive Couplings

Features

- Large radial misalignment capability
- Hubs made of aluminum 2011 T8
- Center discs made of DelrinTM
- Mechanical 'fuse' prevents damage to other components in over-torque conditions
- Zero backlash
- Corrosion-resistant
- Non-magnetic
- Operating temperature range: -20 to 60 °C (-4 to 140 °F)

- Electrical isolation
- Absorbs shock and isolates vibration
- Dampens resonance
- Speeds up to 3,000rpm
- Low inertia

Applications

- General-purpose applications
- Medium-speed applications

^{*} Assembly dimensions are for any (2) hubs + (1) torque disc of the same "size" as assembled. Among components of the same "size," the only dimension that varies is the hub bore diameter (ØB), which is shown separately.

See our website: www.AutomationDirect.com for complete Engineering drawings.

www.automationdirect.com Rotary Motion tROT-24

^{**} When DC-DAC33-08 is used with another DC-DAC33-xx bore size, L1 = 45. When 2 DC-DAC33-08 are used together, L1 = 42

Accessories – Bore Reducers

Features

- For use in all SureMotion drive coupling hubs to reduce bore size
- Split-collar design with 2 set screw flats will not mark shaft
- 25% greater holding power than standard split collar
- Hardened stainless steel
