How to read the timing charts

Totem Pole Models

Out A and Out B are 90 degrees out of phase. Like any quadrature encoder, four unique logic states are created internally to the encoder. This is based on the rising edge to rising edge (one cycle) on channel A or B that indicates one set of bars on the internal encoder disk has passed by the optical sensor.

OUT Z is the absolute reference added to an incremental encoder and is also known as home position. It signifies a full rotation of the encoder shaft.

Channel timing chart

a, b, c, d = (1/4 ± 1/8) P
 e: 400 P or less: 25 to 150%
 500 P or more: 1 ± 30%
 (At 1,800, 3,600, 5000 pulses only: 50 to 150%)

OUT Z generates home position in both directions.

Modular/Kit and TRDA-25 encoders have connectors and require separate cables. All other encoders feature an integral 2m cable.

- *Operating Voltage and Electrical Output:
- LD = Line Driver (all Line Drivers require 5VDC supply)
 - OC = NPN Open Collector (at Operating Voltage)
 - P/P = Push Pull or Totem Pole (at Operating Voltage)

**Modular/Kit encoders are direct mount, there are no load ratings.
