

# GH15 Series IEC Motor Controls

The GH15 series of IEC contactors and thermal overload relays are manufactured by Europe's leading maritime contactor company. Contactors for ocean-going vessels are built to the most rigid specifications. This same design technology carries over to this line of industrial motor controls.

We offer individual components that

allow you to use the contactor alone or to assemble your motor starter using our thermal overload relays. You can also combine a manual motor starter/protector for all-in-one protection.

Use contactors wherever you need a heavy-duty switching device with up to three poles. Add up to 2 side-mounted auxiliary blocks (1 per side)

plus 1 top-mounted auxiliary contact block per contactor max. This will equal up to 8 possible auxiliary contact configurations. Or use the optional mechanical interlock to create an inexpensive reversing contactor.

Self-lifting pressure plate terminals make for quick wiring terminations.

Actuator coils, available in 110/120 V and 220/240 V, 60Hz models, accommodate most applications.

IEC sizes B through TT accommodate up to 250 hp motors @460 VAC.

Terminals are IP20 rated to protect fingers from electrical shock.

35mm DIN-rail mounting and panel mounting (larger size) provides fast and easy installation. Panel mounting holes are provided.

Top and side mounted auxiliary contacts offer versatility for space requirements.

## Approvals

- cULus listed #E191059
- UL 60947-4-1A

See next page for detailed specifications.

\* Up to 2 auxiliary contact blocks may be added to the contactor by utilizing the side mount and top mount contact block assemblies. Though referred to as a top mount assembly, the GH15T mounts to the front of the contactor.

Note: If using the [BM0H](#) or [BM3H-AD](#) mechanical interlock, the use of auxiliary contacts is prohibited on the side of each contactor where the interlock is mounted. This does not pertain to the auxiliary contact built into the GH15BN, GH15CN and GH15DN contactors.

## Notes

1. AC3 type loads consist of squirrel cage three phase motors.
2. AC1 non-inductive or slightly inductive loads. Typically resistive loads (i.e. furnaces, ovens, etc.)
3. Type 2 coordination is a protection category for IEC 60947-4-1. Section 8.2.5.1 specifies that Type 2 coordination requires that, under short circuit conditions, the contactor or starter shall cause no danger to persons or installations, and shall be suitable for further use. The risk of minor contact welding is possible.

## Notes

1. AC3 type loads consist of squirrel cage three phase motors.
2. AC1 non-inductive or slightly inductive loads. Typically resistive loads (i.e. furnaces, ovens, etc.)
3. Type 2 coordination is a protection category for IEC 60947-4-1. Section 8.2.5.1 specifies that Type 2 coordination requires that, under short circuit conditions, the contactor or starter shall cause no danger to persons or installations, and shall be suitable for further use. The risk of minor contact welding is possible.
4. NEMA ICS 5-2000. For more information, refer to Control Circuit Contact Electrical Ratings.

## Notes

1. AC3 type loads consist of squirrel cage three phase motors.
2. AC1 non-inductive or slightly inductive loads. Typically resistive loads (i.e. furnaces, ovens, etc.)
3. Type 2 coordination is a protection category for IEC 60947-4-1. Section 8.2.5.1 specifies that Type 2 coordination requires that, under short circuit conditions, the contactor or starter shall cause no danger to persons or installations, and shall be suitable for further use. The risk of minor contact welding is possible.
4. NEMA ICS 5-2000. For more information, refer to Control Circuit Contact Electrical Ratings.

## Notes

1. AC3 type loads consist of squirrel cage three phase motors.
2. AC1 non-inductive or slightly inductive loads. Typically resistive loads (i.e. furnaces, ovens, etc.)
3. Type 2 coordination is a protection category for IEC 60947-4-1. Section 8.2.5.1 specifies that Type 2 coordination requires that, under short circuit conditions, the contactor or starter shall cause no danger to persons or installations, and shall be suitable for further use. The risk of minor contact welding is possible.
4. NEMA ICS 5-2000. For more information, refer to Control Circuit Contact Electrical Ratings.

## Notes

- AC3 type loads consist of squirrel cage three phase motors.
- AC1 non-inductive or slightly inductive loads. Typically resistive loads (i.e. furnaces, ovens, etc.)
- Type 2 coordination is a protection category for IEC 60947-4-1. Section 8.2.5.1 specifies that Type 2 coordination requires that, under short circuit conditions, the contactor or starter shall cause no danger to persons or installations, and shall be suitable for further use. The risk of minor contact welding is possible.
- NEMA ICS 5-2000. For more information, refer to Control Circuit Contact Electrical Ratings.

# GH15 Series Contactor

## Electrical Durability of Main Contacts

Main contacts have a conductor material support, on which a silver alloy tip is welded. This tip makes, carries and breaks the load currents. The contact durability is represented by the average number of operations which the contact can carry out without maintenance and before the contact requires replacement. Every operation involves mechanical stresses

when the contactor closes and thermal stress during load current conduction. However, the main stress that affects contact durability is due to the electric arc between contacts during making and breaking operations. The electric arc causes the erosion of the contact active material; such erosion will increase according to the intensity of the current

and the arcing time. Therefore the contact durability is strictly dependent on the type of load, i.e. on the utilization category, rated operational current and rated voltage. The following diagrams give curves of contact durability for each contactor for use in category AC-1, AC-3 and AC-4.

Note: Average durability curves are at 400V. For higher operational voltages, reduce the durability according following table.

| Electrical Durability Curve Adjustment for Voltages Over 400V |             |      |
|---------------------------------------------------------------|-------------|------|
|                                                               | AC-1 / AC-4 | AC-3 |
| 400V                                                          | 0%          | 0%   |
| 440V                                                          | 10%         | 5%   |
| 500V                                                          | 20%         | 10%  |
| 690V                                                          | 40%         | 20%  |

### GH15 Series Mounting Positions

The correct mounting position is with the base plate in the vertical plane. The device can be mounted up to 25° from the vertical position.

# GH15 Series Contactor Accessories

## Auxiliary contacts

Auxiliary contacts are designed for installation on all the GH15 series contactors. The snap-on design makes them quick and easy to install. The bifurcated contact blocks feature silver nickel alloy contacts.

Add up to 2 side-mounted auxiliary blocks (1 per side) plus 1 top-mounted auxiliary contact block per contactor max. This will equal up to 8 possible auxiliary contact configurations.

| Auxiliary Contacts    |         |             |          |
|-----------------------|---------|-------------|----------|

# GH15 Series Contactor Accessories

## Mechanical Interlock

Mechanical interlocks connect two contactors horizontally. When one contactor is energized, the other contactor is mechanically prohibited from making, even though it may be energized. The mechanical interlocks work with 45, 60, 79, 110 and 145 mm contactors.

| Mechanical Interlock  |         |                                                                                                                                                 |          |

## Terminal Screens

Terminal screens are for use with contactors and thermal overload relays to protect against accidental contact with live components.

| Terminal Screens*     |         |          |                                                                                                       |                            |

# Adjustable Overloads For GH15 Series Contactors

The RTD series adjustable motor overload relays are designed for use with the GH15 Series 45 mm, 60 mm, 79 mm, 110 mm, and 145 mm contactors.

By combining the contactor with an overload relay, you have a reliable motor starter solution.

## **RTD32 overload relays for 45mm contactors**

- 16 sizes for motor currents from 0.4 to 32 amps
- Units come with (1) N.O. and (1) N.C. auxiliary contacts
- Mount directly to 45mm contactors
- Class 10A trip class
- cULus listed, CE

## **RTD65 overload relays for 60mm contactors**

- Four sizes for motor currents from 20 to 65 amps
- Units come with (1) N.O. and (1) N.C. auxiliary contacts
- Mount directly to 60mm contactors
- Class 10A trip class
- cULus listed, CE

## **RTD180 overload relays for 79mm and 110mm contactors**

- 3 sizes for motor currents from 60 to 180 amps
- Units come with (1) N.O. and (1) N.C. auxiliary contacts
- Mount directly to 110mm contactors with connection links (included)
- Hard-wire connection to 79 mm contactors (No connection links available)
- Class 10A trip class
- cULus listed, CE

## **RTD320 overload relays for 145mm contactors**

- 2 sizes for motor currents from 144 to 320 amps
- Units come with (1) N.O. and (1) N.C. auxiliary contacts
- Mount directly to 145mm contactors with connection links (included)
- Class 10A trip class
- cULus listed, CE

# GH15 Series Adjustable Overload Relay Features

**RTD32**  
for 45 mm Contactors

Note: Scale is 1:1 on dial.

**RTD180** for 79 mm and 110 mm Contactors

Note: The secondary current for the dial adjustment of the relay is 100x the dial current. For example, for a rated load current of 120A, the relay setting should be 1.2A.

**RTD65**  
for 60 mm Contactors

# GH15 Series Overload Relay Selection Guide

**Step 1** Determine the motor FLA and service factor listed on the motor name plate. Next, calculate the size overload protection required based on 2005 NEC 430.32. Select your motor's FLA (Full Load Amperage) from Column A. Tripping current occurs at 125% of FLA in column A.

**Step 2** Follow across to Column B to find your contactor size. Check the maximum amperage rating for that contactor. Ranges overlap and you may have to go to the next larger size.

**Step 3** After selecting your contactor, follow across to Column C to find your overload relay model number.

**Step 4** Order the contactor and overload relay, any desired auxiliary contacts, then assemble and install your motor starter.

| Motor Contactor and Overload Relay Selection Guide (When Motor FLA is Known) |                                |                              |          |                          |
|------------------------------------------------------------------------------|--------------------------------|------------------------------|----------|--------------------------|
| A                                                                            | B                              | C                            | Price    | IEC Contactor Frame Size |

# GH15 Series Contactors Overload Technical Characteristics

## Typical Trip Curves

### 45mm and 60mm Overloads

Note: Curves show tripping time (average value) versus multiples of setting current  $I_r$ .

— Tripping starting from cold  
— Tripping starting from hot

### 79mm, 110mm, and 145mm Overloads

# GH15 Series Contactors Overload

## Technical Characteristics

### Thermal Overload Relays Specifications
