The XEM CPU module from LS Electric is the anchor of the XGB PLC series. It is a high performance motion-capable PLC in a small package. The CPU module is equipped with a high performance microprocessor that controls up to 6 axis of position control, high speed I/O, and built in ethernet communications. Optional EtherCAT® motion modules allow control of up to 16 EtherCAT® servo drives.

The XEM CPU is a stand-alone block style PLC. Different CPU models provide options for low density 16-point I/O wired directly at the CPU terminal blocks, or high density 32-point I/O which requires one smart link cable and terminal block remotely mounted. The system supports 16 built-in PID loops and can be expanded with up to 7 modules.

I/O and memory are assigned direct variables. User-defined symbolic variables can be created for easy reference in the programming.

The PLC offers an advanced level of programming, featuring the IEC61131-3 standard capable of Ladder, Structured Text, Sequential Function Chart and Instruction List. Many advanced Function block instructions, including motion specific ones, are available for use in both Ladder and Structured Text programming.

XGB CPU Modules

XGB Series PLC - Basic System Setup

Follow the steps below to select and configure the fundamental components needed to get your XEM CPU module up and running. You can also access several quick start video guides here: [Building and Powering the LS PLC Rack](#)

1 Select your XEM CPU module, and Smart Link cable/terminal block (for 32-series CPUs).

See "Smart Link I/O System" on page <?> for cable and terminal block part numbers.

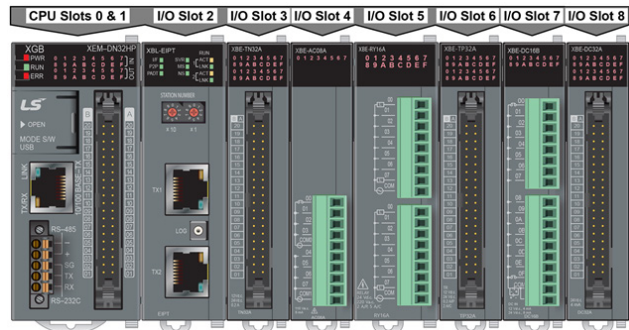

Note: Cable and terminal block only required for XEM-DN32H2, XEM-DN32HP, XEM-DP32H2, and XEM-DP32HP.

Note: Screwdriver size 04/2.5

2 Select and install up to seven option modules. 32-point I/O and counter input modules will require a Smart Link cable and terminal block. EtherCAT modules must be added to Slot 2 and 3 only.

Use the Product Selector to help configure the PLC at automationdirect.com/ls/config.

Note: Screwdriver size 2.5 mm

3 Connect user-supplied 24VDC power. Connect power to the XEM module, then connect power to the XTB-40H terminal block and any installed I/O modules.

Note: XGB-CON-3PX cable pigtail is included with the CPU.

I/O Module Installation

Attach each I/O module to the PLC per the diagram to the right. Up to seven modules can be attached by hooking in to each expansion module in the same manner. Any 32-point I/O and counter input module will require a Smart Link cable and terminal block. Use the online Product Selector to help configure the PLC at automationdirect.com/ls/config.

1. Remove expansion port cover.
2. Align tabs with corresponding holes.
3. Seat the expansion port connector.
4. Secure modules with top and bottom sliding lock.

Mounting the PLC

When mounting the completed PLC module to your structure, keep the distances shown in the diagram below to maintain proper ventilation and allow easy detachment and attachment.

Additional Clearance Distances:

- Wire duct on the side requires 5mm or more
- Panel wall on the side requires 20mm or more
- Another device on the side requires 50mm or more

DIN Rail Mounting

The PLC has a hook for DIN rail mounting (35mm). To mount to DIN rail:

- Pull the hook as shown below at the bottom of module and install it at the DIN rail.
- Push the hook to fix the module to the rail after installing.
