Wiring I/O Modules

There are two available methods for wiring most I/O modules: The **ZIP**Link wiring system or hand wiring to the optional removable I/O module terminal blocks.

Note: The high-density 32-point and 64-point I/O module design requires the use of the *ZIP*Link wiring system. Thermocouple and RTD modules are not compatible with the *ZIP*Link system and are shipped with the optional terminal blocks included.

For wiring I/O modules, we strongly recommend using pre-wired **ZIP**Links wiring systems, which eliminate the need for hand wiring modules to terminal blocks.

See the selection matrix guide on the following pages.

ZIPLink Pre-Wired Terminal Block Cable

Removable Terminal Blocks

For most I/O modules you can also purchase a removable terminal block (part no. <u>P3-RTB</u>).

Note: <u>P3-RTB</u> supplied with thermocouple and RTD modules. <u>P3-RTB</u> not compatible with 32-point and 64-point I/O modules.
