## Hydraulic Cylinders

Peninsular Hydraulic Cylinders incorporate state-of-the-art design features that are fabricated to very strict tolerance specifications from the highest quality materials available. The result is reliable and trouble-free operation under the most demanding conditions.

## Operation

Double-acting cylinders have two ports - one in the head and one in the end cap. Directing pressurized fluid to the end cap will cause the rod to extend. Directing pressurized fluid to the head will cause the rod to retract.

Click on the thumbnail or go to <https://www.automationdirect.com/VID-HY-0001> for a short introduction on Peninsular Hydraulic Cylinders.

## Features

- Interchangeable with other popular brands of NFPA cylinders
- Available bore sizes: 1-1/2", 2", 2-1/2", 3-1/4", 4"

## Cylinder Forces

- Cylinder force is calculated by multiplying the fluid pressure times the net piston area. Use the tables below to estimate the cylinder force.
- To increase the operating life of cylinders and other components, use the lowest system pressure (with an adequate safety margin) that will provide the needed force for your application.
- Any side load on the piston rod will reduce service life. Make every effort in machine design to minimize side loads.
