## Flush Mounting

Flush models can be installed with their sensing faces flush to the metal. The distance from opposing metal surfaces must be  $\geq 3s_n$  (where  $s_n$ =nominal switching distance), and the distance between two proximity switches (side by side) must be  $\geq 2D$ .

## Non-Flush Mounting

Non-flush models can be identified by their "caps," since they have no metal housing surrounding the area of the sensing face. The sensing face must extend  $\geq 2s_n$  (where  $s_n$ =nominal switching distance) from the metallic installation medium. The distance from opposing metal surfaces must be  $\geq 3s_n$ , and the distance between two adjacent proximity switches must be  $\geq 3D$ . The metal body leaves uncovered part of the sensing area, resulting in an increased sensing distance.

## Dimensions

Technical drawing of a mechanical part, likely a valve or plug, showing a cross-section and a side view. The cross-section features a central vertical bore with a diameter of 30.0 [1.18] and a top flange with a diameter of 18.3 [0.72]. The side view shows a total height of 70.6 [2.78] and a base thickness of 1.5 [0.06]. Various other dimensions and tolerances are provided throughout the drawing.
