#### Flush Mounting

Flush models can be installed with their sensing faces flush to the metal. The distance from opposing metal surfaces must be  $\geq 3$ sn (where sn=nominal switching distance), and the distance between two proximity switches (side by side) must be  $\geq 2D$ .

#### Non-Flush Mounting

Non-flush models can be identified by their "caps," since they have no metal housing surrounding the area of the sensing face. The sensing face must extend  $\geq 2$ sn (where sn=nominal switching distance) from the metallic installation medium. The distance from opposing metal surfaces must be  $\geq 3$ sn, and the distance between two adjacent proximity switches must be  $\geq 3$ D. The metal body leaves uncovered part of the sensing area, resulting in an increased sensing distance.
