

RHINO SELECT PSFA Series Power Supplies With Integrated UPS

Overview

RHINO SELECT PSFA series open frame power supplies come with integrated DC UPS function. The PSFA models will switch to battery operation (batteries not included) without interruption to prevent end-product downtime for the customer in the event of power disruption or unexpected loss of AC input power. Consequently, the PSFA series can increase operational reliability of a critical operation. Convection cooling is applied for the single phase design with wide operating temperature range from -20°C to +70°C. Diagnostic monitoring signals for AC OK and Battery Low status will alert the user of any failure through TTL open collector. Metal chassis with case cover is available for different installation preferences.

Features

- Universal AC input voltage range
- Zero switch over time from loss of AC to battery operation
- Protection against reverse polarity battery connection
- Built-in diagnostic monitoring for AC OK and Battery Low status
- Overvoltage / Overcurrent / Over Temperature / Short circuit Protections
- Built-in over current and short circuit protection in buffering (battery discharging) mode operation
- 3-year warranty

Buffering Time		Approx.1hr 30mins for battery 12V/7AH		Approx.3hrs for battery 24V/7AH		
Recommended Extended Fuse for Battery		Automotive 20A / 80V, FK3 type from Littelfuse, or similar in the battery B+ path. The battery fuse protects the wires between thebattery and the unit.				
Battery Charging (Normal Mode)		CC-CV mode [constant current-constant voltage]				
End-Of-Change Voltage		The unit always charges battery to a fixed voltage value.				

- 1. The voltage level of battery to enable "Battery Low" function.
- 2. Minimum battery voltage required for power supply to detect battery in order to begin charging. Battery must be connected to power supply, with the correct polarity, across B+ and B- terminals; and, with input and output loads disconnected.
- 3. Charging time depends on the state/condition of battery discharge; and will depend on the amount of buffering/discharging time, and load current that battery was discharged at.
- 4. V+ and V- terminals are for power supply voltage output.
