## Application Examples

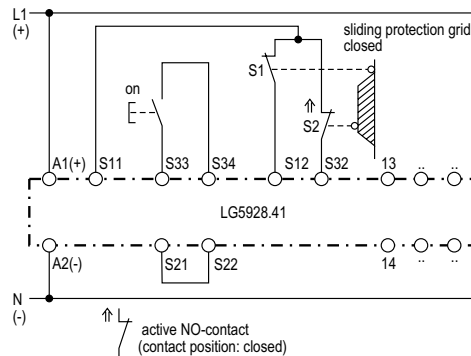

Single channel emergency stop circuit. This circuit does not have any redundancy in the emergency-stop control circuit. Suited up to SIL2, Performance Level d, Cat. 3

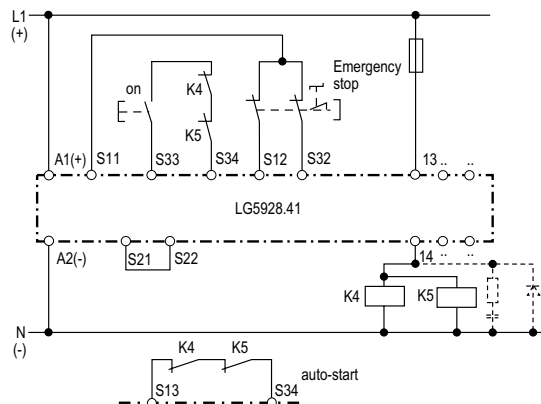

Contact reinforcement by external contactors, 2-channel controlled. The output contacts can be reinforced by external contactors with forcibly guided contacts for switching currents > 8 A e.g. 6 A. Functioning of the external contactors is monitored by looping the NC contacts into the closing circuit (terminals S13-S34 or S33-S34). Suited up to SIL3, Performance Level e, Cat. 4

2-channel emergency stop circuit with cross fault monitoring. Suited up to SIL3, Performance Level e, Cat. 4

2-channel safety gate monitoring. Suited up to SIL3, Performance Level e, Cat. 4

Contact reinforcement by external contactors controlled by one contact path. S33 - S34 must stay open on auto start. Suited up to SIL3, Performance Level e, Cat 4, if the external contactors are in the same cabinet and the wiring is short circuit and crossfault prove.

## Curves

— device mounted on distance with air circulation.  
max. current at 55°C over  
3 contact rows =  $2 \times (7A)^2 + (5A)^2 = 123A^2$

- - - device mounted without distance heated by  
devices with same load.  
max. current at 55°C over  
3 contact rows =  $3 \times (3A)^2 = 27A^2$

$$\Sigma I^2 = I_1^2 + I_2^2 + I_3^2$$

$I_1, I_2, I_3$  - current in contact rows
