ProSense® SCU Series Universal Signal Conditioner

SCU-7900 Signal Conditioner

Part No. SCU-7900

The SCU-7900 Universal Signal Conditioner from AutomationDirect provides the flexibility to accurately measure AC RMS current or AC RMS voltage. The selectable input can measure AC supply voltage up to 300 VAC RMS or AC current transformers up to 5A RMS. The measured AC voltage or current input can be converted to numerous selectable unipolar or bipolar DC current or voltage output ranges or custom configured with two-point field scalability. The isolated universal supply voltage input eliminates the need for separate transformers or power supplies. Isolation is also provided between input and output.

The SCU-7900 is easily configured with the SCU-PDM2 menu-structured LCD programming/display module (a computer running special calibration software is not required, and there are no confusing DIP switches or jumpers to set). Automatic scrolling Help text identifies each menu item. The detachable programming/display module can store and transfer configuration parameters from one signal conditioner to another, minimizing set-up time in multiple unit applications. Programming is available in seven different languages, and the programming/display module can be password protected to prevent unauthorized changes to the configuration. When not used for configuration, the programming/display module can remain on the signal conditioner to display the input signal value, engineering units, and output signal. A process simulation function allows manual manipulation of the input signal to control the output signal for trouble-shooting and checkout.
