STAHL Intrinsicly Safe Zener Barrier

9002-77-093-300001

Overview

The Zener Barrier provides intrinsically safe operation of thermocouple applications or any other intrinsically safe device that falls within the safety data and electrical data parameters of the Zener Barrier.

This compact, space-saving device is easy to install on a DIN rail. Simply snapping the barrier onto a grounded DIN rail provides a connection to ground.

Features

- Space-saving design
- Easily grounded via the DIN rail
- Convenient grounding lugs on top and bottom of barrier
- Only one type of exchangeable fuse – allows reduced stocking requirements and eliminates risk of errors during fuse replacement

The Zener Barrier must be grounded in accordance with Article 504/505 of the National Electrical Code or the Canadian Electrical Code, Part 1, whichever applies. There are multiple ways to ground the Zener Barrier:

- The DIN rail connection can provide a path to ground if the DIN rail is properly grounded.
- Ground the Zener Barrier by utilizing the top or bottom grounding lug.

Refer to the installation manual for full installation instructions.

NOTE: An isolator barrier can be used if grounding is unavailable.
