

DeviceNet™ Slave

T1K-DEVNETS \$322.00

DeviceNet™ I/O

system overview

If you are already using or planning to implement a DeviceNet™ controller network, our Terminator I/O sub-system will help further reduce the cost of your overall application. We now offer the T1K-DEVNETS (slave) module, which allows our Terminator I/O sub-system to be linked with a DeviceNet master controller. DeviceNet is a low-cost control network that provides a common method to connect on a single network. This advanced communications media and software is referred to as DeviceNet and significantly reduces hardwiring costs. DeviceNet provides specifications for information exchanged between nodes, such as controller data associated with low-level devices and configuration parameters individually related to system operations.

Here's how it works:

The T1K-DEVNETS module is a DeviceNet slave. This module maintains a database with all the identification data, diagnostic information, and parameters that control the module operation. The T1K-DEVNETS module scans and reports all discrete and analog I/O data to a DeviceNet master. The AC power supply provides a 24VDC output for simple wiring of sensors and actuators into the Terminator I/O DeviceNet sub-system will increase installation flexibility as well as save on wiring costs. The T1K-DEVNETS module supports all Terminator I/O discrete and analog I/O modules.

The T1K-DEVNETS also offers the following features:

- **Cost-effective:** With a single network for devices, hard-wiring costs are reduced.
- **Easy connectivity:** Low-cost four wire installation is easy to implement and maintain.
- **Innovative technology:** Power is integrated into the device wiring.
- **Diagnostics:** The module provides advanced error diagnostics not commonly available in traditional control systems.
- **Highly dependable:** Fast response for demanding applications.
- **LED indicators:** Provide quick indication of Terminator I/O power and operating mode.

General Specifications	
DeviceNet Compatibility	Predefined Group 2 master/slave communications
Maximum Field Devices per Bus	64 (see table next page)
Maximum I/O Points per DEVNETS	1024 input bits (analog or discrete) 1024 output bits (analog or discrete) as specified by DeviceNet Slave Polling Specification
Communication to Field Devices	Standard 4-wire shielded cable to cabinet connector, molded 4-wire cable @ up to 500Kbps to field devices
Serial Port	RS232C, RJ12, Protocol support: K-sequence, ASCII
Module Connector	5-position removable terminal (European style)
Operating Temperature	0 to 55°C (32 to 131°F)
Storage Temperature	-20 to 70°C (-4 to 158°F)
Relative Humidity	5 to 95% (non-condensing)
Environmental Air	No corrosive gases permitted
Vibration	MIL STD 810C 514.2
Shock	MIL STD 810C 516.2
Noise Immunity	NEMA ICS3-304, Impulse noise 1ms, 1000V FCC class A, RFI (144Mhz, 430Mhz 10W, 10cm)

**Connect our Terminator I/O
to your DeviceNet network.**

Dimensions and Installation

It is important to understand the installation requirements for your Terminator I/O system. This will ensure that the Terminator I/O products work within their environmental and electrical limits.

Plan for safety

This catalog should never be used as a replacement for the technical data sheet that comes with the products or the **T1K-INST-M** Installation and I/O Manual (available online at www.automationdirect.com.) The technical data sheet contains information that must be followed. The system installation should comply with all appropriate electrical codes and standards.

Unit dimensions and mounting orientation

Use the following diagrams to decide if the Terminator I/O system can be installed in your application. Terminator I/O units should be mounted horizontally. To ensure proper airflow for cooling purposes, units should not be mounted upside-down. It is important to check the Terminator I/O dimensions against the conditions required for your application. For example, it is recommended to leave 2" depth for ease of access and cable clearance. However, your distance may be greater or less. Also, check the installation guidelines for the recommended cabinet clearances.

Terminator I/O Environmental Specifications	
Ambient Operating Temperature	32°F to 131°F (0°C to 55°C)
Storage Temperature	-4°F to 158°F (-20°C to 70°C)
Ambient Humidity	5% to 95% (Non-condensing)
Atmosphere	No corrosive gases. The level of environmental pollution = 2 (UL 840)
Vibration Resistance	MIL STD 810C, Method 514.2
Shock Resistance	MIL STD 810C, Method 516.2
Voltage Withstand (Dielectric)	1500VAC, 1 minute
Insulation Resistance	500 VDC, 10 Mq
Noise Immunity	NEMA ICS3-304 Impulse noise 1μs, 1000V FCC class A RFI (144MHz, 430MHz 10W, 10cm)
Agency Approvals	UL, CE, FCC class A, NEC Class 1 Division 2

I/O Module Installation

I/O module installation

Terminator I/O modules feature separate terminal bases for easy installation.

To install I/O modules:

1. Slide the module into its terminal base (until it clicks into position)
2. Hook upper DIN rail tabs over the top of DIN rail, and press the assembly firmly onto the DIN rail.
3. Slide the module along the DIN rail until it engages with the adjacent module.

DN-ASB1 angled mounting bracket

Great for mounting
in upper locations

Great for mounting
in lower locations

Optional angled support bracket raises and tilts the mounting rail for easier access and wiring. Use with 35mm DIN rail. See the Connection Systems in this catalog for details.

Removing I/O modules is a snap

Grip the locking handle, as shown, and pull gently to eject the I/O module from its base. The module will slide out for easy replacement. This procedure does not apply to network interface modules or power supplies, which have integral bases.

Hot-swappable I/O modules

You can remove I/O modules under power, but exercise caution while doing so. Do not touch the terminals with your hands or any conductive material. Always remove power when possible.

Power Supplies and Power Requirements

Power supplies

The Terminator I/O product line offers two power supply options: AC or DC. The power supplies are always positioned to the left of the modules to which they supply power. Consult the system configuration examples and the power budgeting example for more information on positioning power supplies.

Power supply specifications

Power Supply Specifications		T1K-01AC \$159.00	T1K-01DC \$167.00
Input Voltage Range		110/220 VAC	12/24 VDC
Input Frequency		50/60 Hz	N/A
Maximum Power		50VA	30W
Max. Inrush Current		20A	10A
Insulation Resistance		> 10MΩ @ 500 VDC	
Voltage Withstand		1 min. @ 1500VAC between primary, secondary and field ground	
5VDC PWR	Voltage	5.25 VDC	5.25 VDC
	Current Rating	2000 mA max (see current option note below)	2000mA max
	Ripple	5% max.	5% max.
24VDC PWR	Voltage	24VDC	N/A
	Current Rating	300mA max. (see current option note below)	N/A
	Ripple	10% max.	N/A
Fuse		1 (primary), not replaceable	
Replacement Terminal Block (Phoenix Contact)		MVSTBW 2.5/4-ST- 5.08 BK	MVSTBW 2.5/6-ST- 5.08 BK
Note: 500mA @ 24VDC can be achieved by lowering the 5VDC from 2000mA to 1500mA.			

Power requirements

Module	5VDC	24VDC	Module	5VDC	24VDC	Module	5VDC	24VDC
Interface Modules			DC Output Modules			Analog Input Modules		
T1H-EBC100	300	0	T1H-08TDS	200	0	T1F-08AD-1	75	50*
T1K-DEVNETS	250	45	T1K-08TD1	100	200*	T1F-08AD-2	75	50*
T1K-MODBUS	300	0	T1K-16TD1	200	400*	T1F-16AD-1	75	50*
DC Input Modules			T1K-08TD2-1	200	0	T1F-16AD-2	75	50*
T1K-08ND3	35	0	T1K-16TD2-1	200	0	T1F-16RTD	150	0
T1K-16ND3	70	0	AC Output Modules			T1F-16TMST	150	0
AC Input Modules			T1K-08TA	250	0	T1F-14THM	60	70*
T1K-08NA-1	35	0	T1K-16TA	450	0	Analog Output Modules		
T1K-16NA-1	70	0	T1K-08TAS	300	0	T1F-08DA-1	75	150*
			Relay Output Modules			T1F-08DA-2	75	150*
			T1K-08TR	350	0	T1F-16DA-1	75	150*
			T1K-16TR	700	0	T1F-16DA-2	75	150*
			T1K-08TRS	400	0	Combination Analog Modules		
			Specialty Modules			T1F-8AD4DA-1	75	60*
			T1H-CTRIO	400	0	T1F-8AD4DA-2	75	70*
			* Use either internal or external source for 24VDC			* Use either internal or external source for 24VDC		

Calculating the power budget

To calculate the power budget, read the available power (current rating) from the Power Supply Specifications table and subtract the power consumed by each module to the right of the power supply. Do not include modules to the right of an additional power supply.

Adding additional power supplies

Each power supply furnishes power only to the network interface and I/O modules to its right. Inserting a second power supply closes the power loop for the power supply to the left, while also powering the modules to its right. Perform a power budget calculation for each power supply in the system.

Power Budget Example		
Module	5VDC	24VDC
T1K-01AC	+2000mA	+300mA
T1H-EBC100	-300mA	-0mA
T1K-16ND3	-70mA	-0mA
T1K-16TD2	-200mA	-0mA
T1F-08AD-1	-75mA	-50mA
Remaining	+1355mA	+250mA

This power supply powers the network interface module and the next two I/O modules

This power supply powers these three I/O modules

Expansion I/O Configurations

Expansion cables

<u>T1K-10CBL</u>	\$104.00
<u>T1K-10CBL-1*</u>	\$138.00

Right side to left side expansion cable

The T1K-10CBL-1 connects the right side of an I/O base to the left side of the next I/O base. A maximum of two T1K-10CBL(-1) cables can be used per expansion system.

*Note: The (-1) versions of the expansion cables pass 24VDC through on an isolated wire. (All cables pass the 5VDC base power.) Any local expansion DC input module configured for "internal power" (current sourcing) must either have a power supply preceding it on the same base or, have a (-1) version cable pass 24VDC from a power supply on the preceding base.

Using two T1K-10CBL expansion cables

In the system below, power supplies can be used anywhere.

Field Device Wiring and Power Options

Terminal base specifications

Terminator I/O terminal bases are available in screw clamp and spring clamp versions for both half-size and full-size modules. Hot stamp silk screen labeling is used for numbering I/O points, commons, and all power terminals.

Terminal Base Specifications		
Terminal Type	Screw type	Spring clamp
Recommended Torque	1.77–3.54 lb-in (0.2–0.4 N·m)	N/A
Wire Gauge	Solid: 25–12 AWG	Solid: 25–14 AWG
	Stranded: 26–12 AWG	Stranded: 26–14 AWG

Field device wiring options

Power your DC input devices from the integrated 24VDC power supply bus. **T1K-08ND3** and **T1K-16ND3** DC input modules include jumpers for selecting the internal 24VDC power supply available for 2- and 3-wire field devices. Clearly labeled triple stack terminals make it easy to wire 2- and 3-wire devices ensuring clean wiring with only one wire per termination.

External user supplied 24VDC power, or auxiliary 24VDC terminals from **T1K-01AC**, can be easily applied directly to one end of the terminal rows and jumpered across each base in the system.

This is a convenient solution for powering analog I/O and discrete DC output devices whose modules do not have direct access to the internal bussed 24VDC. If current consumption increases, simply add additional **T1K-01AC** power supplies into the system.

T1K-08B \$119.00

Screw clamp, half-size

T1K-08B-1 \$129.00

Spring clamp, half-size

T1K-16B \$152.00

Screw clamp, full-size

T1K-16B-1 \$155.00

Spring clamp, full-size

 2 and 3-wire DC input devices
using bussed 24VDC power

 Use externally supplied
24VDC power or 24VDC
auxiliary power from
T1K-01AC

 Do not jumper modules together
to create a 24VDC bus when
using the "hot swap" feature.
See Note below.

Hot-swap feature

The hot-swap feature allows Terminator I/O modules to be replaced while system power is on. Be careful not to touch the terminals with your hands or other conductive material to avoid the risk of personal injury or equipment damage. Always remove power if it is equally convenient to do so.

Note: Before hot-swapping analog or

DC output modules in a Terminator I/O system, make sure that each of the analog and DC output module's 24VDC and 0 VDC base terminals are wired directly to the external power supply individually. If the external 24VDC and 0 VDC is jumpered from base to base in a daisy chain fashion, and an analog or DC output

module is removed from its base, the risk of disconnecting the external 24VDC and 0 VDC to the subsequent I/O modules exists.
