Sinking and Sourcing Concepts

When choosing the type of input or output module for your system DL05/DL06/DL105 I/O type), it is very important to have a solid understanding of sinking and sourcing concepts. Use of these terms occurs frequently in discussion of input or output circuits. It is the goal of this section to make these concepts easy to understand, so you can make the right choice the first time when selecting the type of I/O points for your application. This section provides short definitions, followed by general example circuits.

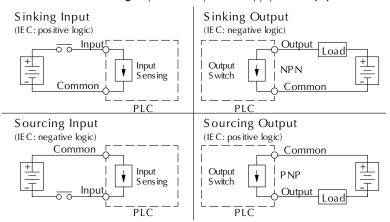

First you will notice that the diagrams on this page are associated with only DC circuits and not AC, because of the reference to (+) and (-) polarities. Therefore, sinking and sourcing terminology applies only to DC input and output circuits. Input and output points that are sinking or sourcing can conduct current in one direction only. This means it is possible to connect the external supply and field device to the I/O point, with current trying to flow in the wrong direction, and the circuit will not operate. However, the supply and field device can be connected every time based on an understanding of sourcing and sinking.

The figure below depicts a sinking input. To properly connect the external supply, it must be connected so the input provides a path to supply common(-). So, start at the PLC input terminal, follow through the input sensing circuit, exit at the common terminal, and connect the supply (-) to the common terminal. By adding the switch between the supply (+) and the input, the circuit is completed. Current flows in the direction of the arrow when the switch is closed.

By applying the circuit principles to the four possible combinations of input/output sinking/sourcing types, there are four circuits, as shown above. The common terminal is the terminal that serves as the common return path for all I/O points in the bank.

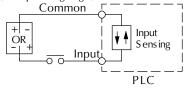

Sinking = provides a path to supply common (-) Sourcing = provides a path to supply source (+)

Sink/source I/O circuits combine sinking and sourcing capabilities. This means that the I/O circuitry in the PLC will allow current to flow in either direction, as shown at the right. The common terminal connects to one polarity, and the I/O point connects to the other polarity (through the field device). This provides flexibility in making connections to your field power supply. Please note:

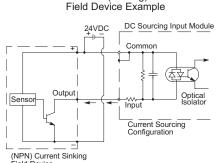

- Wire all I/O points with a shared common as either sinking or sourcing.
- Do not use an AC power supply on a DC sink/source I/O point.

Sink/Source Input (IEC: pos./neg. logic) Common Input

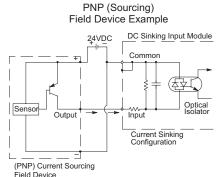

Sink/Source Output (IEC: pos./neg. logic) Common Output PNP/NPN OR Switch Output Load PLC

Field device examples - 3 wire connections

NPN (Sinking)

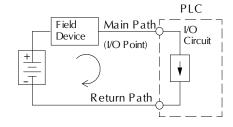

Sinking and Sourcing Concepts

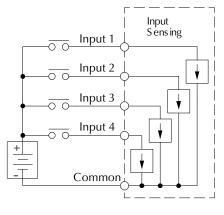

Common terminals and how to use them

In order for a PLC I/O circuit to operate, current must enter at one terminal and exit at another. This means at least two terminals are associated with every I/O point. In the figure at the right, the input or output terminal is the main path for the current. One additional terminal must provide the return path to the power supply. Together, the main path and the return path create a loop, or a complete circuit for current to flow.

If there was unlimited space and budget for I/O terminals, then every I/O point could have two dedicated terminals. However, providing this level of flexibility is not practical or even necessary for most applications. So, most input or output points on PLCs are in groups that share the return path (called commons). The figure at the right shows a group (or bank) of four input points that share a common return path. In this way, the four inputs require only five terminals instead of eight.

NOTE: Assuming all input circuits have a similar resistance, the current at the common terminal is four times greater than the current at any one of the inputs. This effect is especially important to note for output circuits, where the current through a common terminal can reach several amperes. You will need to decide whether to fuse each output point individually, or to put a fuse in the common terminal path.

grouped into banks that share a common return path. The best indication of I/O common grouping is on the wiring label. Sample DL05, DL06 and DL105 wiring labels and their meanings are shown below.

Wiring labels and how to interpret them

DL205, DL305, DL405 - Most DL205, DL305 and DL405 input and output modules group their I/O points into banks that share a common return path. The best indication of I/O common grouping is on the wiring label, such as the one shown at the right. The miniature schematic shows two circuit banks with eight input points in each. The common terminals are labeled "CA" and "CB," respectively.

In the wiring label example, the positive terminal of a DC supply connects to the common terminals. Some of the symbols you will see on wiring labels and their meanings are shown at the right.

DL05/DL06/DL105 — Most DL05, DL06 and DL105 input and output circuits are Input Bank (DL05)

ISO 9001/UL/CUL/EU/RoHS

Throughout the world, there is a wide variety of regulatory codes, agency approvals, and other types of certification that may be required in order to install an automation system. These requirements vary and depend on your exact location and situation. For example, there may be national codes, state and local government codes, and even wide-ranging requirements such as the European Union (EU) Directives. The following are some of these codes and requirements, and explanations of how they may affect you as a PLC and industrial controls user.

ISO 9001

Some companies require their suppliers to use products that are built by companies that adhere to a documented set of quality-related procedures. ISO 9001 is one of the standards in the ISO 9000 family of standards for quality management systems. Koyo Electronics Industries Company, Ltd., the manufacturer of most of our PLC products, is an ISO 9001 certified company, as are many of our other Federation members. Some copies of the ISO certificates are available on our Web site.

Underwriters Laboratories (UL/CUL)

Underwriters Laboratories is one of the world's premier safety testing and certification sources. Many applications require UL approval for insurance and/or other compliance purposes. There are several areas of interest, but the most applicable are: UL508, the standard for Industrial Control Equipment; and UL1604, the standard covering Hazardous Locations. For more information on the Underwriters Laboratories, check their Web site at www.ul.com. There are several tables in this section that show which of our products have a UL listing. (They also indicate the cUL approval, which is required in many applications in Canada.) Please check our Web site for the most current information.

European Union (EU) Directives

This area of certification and approval is absolutely vital to anyone who wants to do business in Europe. One of the key tasks that faced the EU member countries and the European Economic Area (EEA) was the requirement to bring several similar, yet distinct, standards together

into one common standard for all members. The primary purpose of a single standard was to make it easier to sell and transport goods between the various countries and to maintain a safe working and living environment. The Directives that resulted from this "harmonization" of standards are now legal requirements for doing business in Europe. Products that meet these Directives are required to have a CE mark to signify compliance. A few key questions are always asked when the subject of CE is discussed.

Which Directives apply to me? Several Directives apply to our products, and Directives may be amended or added, as required.

- Electromagnetic Compatibility
 Directive (EMC) Provides a means to
 ensure that products placed on the market do not generate electromagnetic disturbances that would affect other apparatus, including radio and/or telecommunications equipment.
- Machinery Safety Directive Covers the safety aspects of the equipment, installation, etc. There are several areas involved, including testing standards covering both electrical noise immunity and noise generation.
- Low Voltage Directive Is also safety related and covers electrical equipment that has voltage ranges of 50-1,000 VAC and/or 75-1,500 VDC.
- **Battery Directive** Covers the production, recycling, and disposal of batteries.

Who is responsible for ensuring compliance with these Directives? Ultimately, we are all responsible for our various pieces of the puzzle. Manufacturers must test their products and document any test results and/or installation procedures necessary to comply with the Directives. As a machine builder, you are responsible for installing the products in a manner that will ensure compliance is maintained. You are also responsible for testing any combinations of products that may (or may not) comply with the Directives when used together. The end user of the products must comply with any Directives that may cover maintenance, disposal, etc. of equipment or various components. Although we strive to provide the best assistance available, it is impossible for us to test all possible configurations of the products we carry with respect to any specific Directive. Because of this, it is ultimately your responsibility to ensure that your machinery (as a whole) complies with these Directives and to keep up with applicable Directives and/or practices

that are required for compliance.

Which programmable controller products carry the CE label? See Tables on pp. 35-11 through 35-14 for controller systems manufactured by Koyo Electronics Industries, Host Engineering or FACTS Engineering. When properly installed and used, the approved components conform to the Electromagnetic Compatibility (EMC), Low Voltage Directive, and Machinery Directive requirements of the standards on the next page.

EC 61000-3-2 Power Factor Correction

The IEC 61000-3-2 standard is intended to reduce the amount of disturbance a device feeds back into its power source. AutomationDirect power supplies all carry the CE mark. Normally, 61000-3-2 is met or does not apply. Only our PS24-150D and PS24-300D could potentially be used in a manner not compliant with the 61000-3-2 standard.

RoHS

The Restriction of Hazardous Substances (RoHS) Directive 2002/95/EC [1] was adopted in February 2003 by the EU. The RoHS directive, which took effect July 1, 2006, restricts the use of six hazardous materials in the manufacture of various types of electrical and electronic equipment. RoHS is linked with the Waste Electrical and Electronic Equipment Directive (WEEE) 2002/96/EC which sets collection, recycling and recovery targets for electrical goods and is part of a legislative initiative to solve the problem of large amounts of toxic e-waste.

Each EU member state will adopt its own enforcement and implementation policies using the directive as a guide. Therefore, there could be as many different versions of the directive as there are states in the EU.

RoHS is often referred to as the lead-free directive, however, it restricts the use of the following six substances:

- Lead
- •Mercury
- •Cadmium
- •Hexavalent chromium (chromium VI or
- Polybrominated biphenyls (PBB)
- •Polybrominated diphenyl ether (PBDE)

For a listing of all products and their compliance status see:

http://support.automationdirect.com/compliance.html#rohs

EU - European Union

• EMC Directive Standards Relevant to

EN50081-1 - Generic emission standard for residential, commercial, and light

EN50081-2 - Generic emission standard for industrial environment

EN50082-1 - Generic immunity standard for residential, commercial, and light industry

EN50082-2 - Generic immunity standard for industrial environment

 Low Voltage Directive Standards **Applicable to PLCs**

EN61010-1 - Safety requirements for electrical equipment for measurement, control, and laboratory use

 Product Specific Standard for PLCs EN61131-2 - Programmable controllers, equipment requirements and tests. This standard replaces the above generic standards for immunity and safety. However, the generic emissions standards must still be used in conjunction with the following standards:

EN 61000-3-2 - Harmonics

EN 61000-3-2 - Fluctuations. We are currently in the process of changing our testing procedures from the generic standards to the product specific standards.

We do have separate Declarations of Conformity that cover the specific products and part numbers approved. Not all of the products have been labeled for CE as of this writing, so you should check the tables on the following pages to be sure. Please also check our Web site for the most up-to-date information on CE approvals or to obtain copies of our Declarations of Conformity.

Are there any special requirements necessary when using controller equipment?

Yes, the installation requirements to comply with the requirements of the Machinery Directive, EMC Directive and Low Voltage Directive are slightly more complex than the normal installation requirements found in the United States. First, check the Declaration for specific application conditions required.

Then, refer to the following manual:

• DA-EU-M - EU Installation Manual that covers special installation requirements to meet the EU Directive requirements. You should download the manual from our Web site to obtain the most current information. The manual is available for download at:

support.automationdirect.com/ compliance.html

Finally, check your user manual for EU information.

Are there any other sources of information? Although the EMC Directive gets the most attention, other basic Directives, such as the Machinery Directive and the Low Voltage Directive, also place restrictions on the control panel builder. Because of these additional requirements, it is recommended that the following publications be purchased and used as guide-

- BSI publication TH42073: February 1996 -Covers the safety and electrical aspects of the Machinery Directive
- EN60204-1:1992 General electrical requirements for machinery, including Low Voltage and EMC considerations
- IEC 1000-5-2: EMC earthing and cabling requirements
- IEC 1000-5-1: EMC general considerations

It may be possible for you to obtain this information locally. However, the official source of applicable Directives and related standards is:

The Office for Official Publications of the European Communities

NEC and NEMA

The National Electrical Code (NEC)

NEC provides regulations concerning the installation and use of various types of electrical equipment.

These classifications are being "harmonized" with the IEC and European Hazardous Location Ratings. A source of information about this "harmonization" is the Instrument Society of America (ISA).

Contact the ISA at:

67 Alexander Drive

RTP, NC 27709

Phone: (919)549-8411

www.isa.org

Another resource is: www.ul.com/hazloc

National Electrical Manufacturers Association (NEMA)

NEMA publishes many different documents that discuss standards for industrial control equipment. Please note that these standards are undergoing "harmonization" with the IEC and European standards and may be replaced. Global Engineering Documents handles the sale of NEMA, IEC and CE documents. For more information, please contact Global Information at:

1 (800) 854-7179 (within the U.S.) (303) 397-7956 (international) (303) 397-2740 (fax) 15 Inverness Way East Englewood, CO 80112-5776 www.global.ihs.com

National E	lectric Code (NEC) Article 500	Hazardous Location	Classification
Class	Division	Group	
Class I Locations in which flammable gases or vapors are (or may be) present in the air in quantities great enough to produce explosive or ignitable mixtures.	DIVISION 1: Locations in which hazardous concentrations of flammable gases or vapors exist continuously, intermittently, or periodically under normal conditions. -or- Locations in which hazardous concentrations of flammable gases or vapors may exist frequently because of repair or maintenance operations or because of leakage. -or- Locations in which breakdown or faulty operation of equipment or processes might release hazardous concentrations of flammable gases or vapors. DIVISION 2: Locations in which volatile flammable liquids or flammable gases are handled, processed, or used, but are normally kept in closed containers and can only escape due to accidental rupture. -or- Locations in which hazardous concentrations of gases or vapors are normally prevented by mechanical ventilation and might become hazardous due to failure of the ventilating equipment. -or- Locations that are adjacent to Class I, Division 1 locations.	GROUP A: Atmospheres containing acetylene GROUP B: Atmospheres containing: acrolein(inhibited) butadiene ethylene oxide hydrogen gases containing more than 30% hydrogen by volume propylene oxide GROUP C: Atmospheres containing: allyl alcohol carbon monoxide cyclopropane diethyl ether ethylene hydrogen sulfide methyl ether n-propyl ether or gases or vapors of equivalent hazard	GROUP D: Atmospheres containing: acetone ammonia benzene butane butyl alcohol ethane ethyl alcohol gasoline heptanes hexanes methane (natural gas) methyl ethyl ketone (MEK) naphta octanes pentanes propane styrene toluene xylenes or gases or vapors of equivalent hazard
Class II Locations in which there are explosive mixtures of air and combustible dust.	DIVISION 1: Locations in which explosive or ignitable amounts of combustible dust are or may be in suspension of continuously, intermittently, or periodically under normal operating conditions. -or- Locations where mechanical failure or abnormal operation of machinery or equipment might cause explosive or ignitable mixtures to be produced. -or- Locations in which combustible electrically conductive dust is present. DIVISION 2: Locations where combustible dust deposite sixt but are not likely to be thrown into suspension in the air, but where the dust deposits may be heavy enough to interfere with safe heat dissipation from electric equipment. -or- Locations where combustible dust deposits may be heavy enough to interfere with safe heat dissipation from electric equipment.	characteristics having resistivi centimeter GROUP F: Atmospheres cor black, charcoal, or coke dust total volatile material or-cart dusts sensitized by other mate explosion hazard, and having ohm-centimeter but equal to ohm-centimeter	or dusts of similarly hazardous ity of less than 100,000 ohm- tatining combustible: carbon s which have more than 8% on black, charcoal, or coke erials so that they present an 3 a resistivity greater than 100 or less than 100,000,000 intaining dusts having resistivi-
Class III Locations in which there is the presence of easily-ignited fibers or flyings, but where the fibers or flyings are not likely to be in suspension in the air in quantities great enough to produce ignitable mixtures.	DIVISION 1: Locations in which easily ignitable fibers or materials producing flyings are handled, manufactured, or used. DIVISION 2: Locations in which easily ignitable fibers are stored or handled (except in a manufacturing process).	(NOT GROUPED) Manufact clothing plants, and fiber pro Easily ignitable fibers include and jute.	cessing plants.

	NEMA Electrical	Enclosu	re Environmental Protection Ratings
Туре	Protection	Location	Description
1	General purpose	Indoor	Accidental contact
2	Drip-proof	Indoor	Falling non-corrosive liquids and falling dirt (dripping and light splashes)
3	Dust-tight, rain-tight	Outdoor	Windblown dust, water, and sleet; ice-resistant
3R	Dust-tight, rain-tight	Outdoor	Same as above, plus melting of sleet/ice will not damage external enclosure or mechanisms
4	Water-tight/dust-tight	Indoor/ outdoor	Splashing water, outdoor seepage of water, falling or hose-directed water
4X	Water-tight/dust-tight	Indoor/ outdoor	Same as above, plus corrosion resistant
5	Dust-tight	Indoor	Dust and falling dirt
6	Water-tight/dust-tight	Indoor/ outdoor	Temporary entry of water limited submersion, formation of ice on enclosure
6P	Water-tight/dust-tight	Indoor/ outdoor	Same as previous, plus prolonged submersion
7	Explosion proof/Class I Group D Hazardous Locations	Indoor	Hazardous chemicals and gases
9	Explosion proof/Class II Hazardous Locations	Indoor	Hazardous dust
11	Drip-proof/corrosion Resistant	Indoor	Oil immersion, corrosive effects of liquids and gases
12	Drip-tight/dust-tight	Indoor	Fibers, lint, dust, and splashing, and dripping condensation of non-corrosive liquids
13	Oil-tight/dust-tight	Indoor	Dust, spraying of water, oil, and non-corrosive coolant

How to interpret IP Ratings

The first number defines the degree of protection against penetration of solid objects into the housing.

The second number defines the degree of protection against penetration of liquid into the housing.

The second number defines the degree of protection against penetration of liquid into the housing.

First Number	Level of Protection
Χ	Not evaluated
0	No protection against contact or entry of solids
1	Protection against accidental contact by hand, but not deliberate contact. Protection against large foreign objects. 1: >/= 50mm 2: >/= 12.5mm 3: >/= 2.5mm 4: >/= 1.0mm
2	Protection against contact by fingers. Protection against medium-size foreign objects. 1: >/= 50mm 2: >/= 12.5mm 3: >/= 2.5mm 4: >/= 1.0mm
3	Protection against contact by tools, wires, etc. Protection against small foreign objects. 1: >/= 50mm 2: >/= 12.5mm 3: >/= 2.5mm 4: >/= 1.0mm
4	Protection against contact by small tools and wires. Protection against small foreign objects 1: >/= 50mm 2: >/= 12.5mm 3: >/= 2.5mm 4: >/= 1.0mm
5	Complete protection against contact with live or moving parts. Protection against harmful deposits of dust.
6	Complete protection from live or moving parts. Protection against penetration of dust.

	Second Number	Level of Protection
	X	Not evaluated
	0	No Protection
	1	Protection against drops of condensed water. Condensed water falling on housing shall have no effect.
	2	Protection against drops of liquid. Drops of falling liquid shall have no effect when housing is tilted to 15° from vertical.
ı	3	Protection against rain. No harmful effect from rain at angles less than 60° from vertical.
1	4	Protection against splashing from any direction.
ı	5	Protection against water jets from any direction.
ı	6	Protection against conditions on ships and decks. Water from heavy seas will not enter.
	7	Protection against immersion in water. Water will not enter under stated conditions of pressure and length of time.
ı	8	Protection against indefinite immersion in water under a specified pressure.
ı	8K	Protection against indefinite immersion in water under a specified pressure.
l	9	Protection against indefinite immersion in water under a specified pressure.
	9K	Protection against high-pressure/steam-jet cleaning.

Additional information on IP ratings can be found in the 1976 IEC Publication: Classification of Degrees of Protection Provided by Enclosures or at **www.iec.ch.** Example: What is IP-67? Complete protection of live parts, protection against the penetration of dust. Additionally, protection while immersed in water.

Footnotes

¹For the latest agency approvals information please see our Website: http://www.automationdirect.com/static/specs/agencyapprovals.pdf

 2 PSxx-050D and PS24-500D are not UL/cUL 1604 listed.

³PSP05-020S, PSP12-024S and PSP24-240S are not UL 60950 recognized.

⁴Except for the following parts, which are not UL approved: BM-N8912, BM-N1012, BM-R1576, BM-R2076, BM-R3076, all BM-Txxxxx, all cable mounts and hand tools.

 5 P3-16TD3P, P3-HSI and P3-HSO modules are not UL1604 E200031 recognized.

⁶The cables are listed in E200031 Vol. 5 Sec. 1; Titled: Unlisted Components Report. Included in this section are ZL-CMA15 and ZL-CMA15L as well. A copy of this section is available from ADC upon request.

⁷The manufacturer of these devices is no longer in business. Please verify listing status with UL directly at Multiple Listings Customer Service (1-877-854-3577 or mls@us.ul.com). For new projects please use ZipLinks manufactured by FACTS Engineering.

⁸Only CPS and CPSF, all others No UL

⁹Not all GSD drives are UL; refer to IronHorse GSD DC Drives section for details.

Product

Product Compatibility

Compatible products

Here's a brief list to help you identify compatible products.

DirectLogic	Compatible
DL05	None
DL06	None
DL105	None
DL205	None
DL305	GE Series 1 TI 305 Simatic TI 305
DL405	TI 405 Simatic TI405

Compatible communication drivers

DirectLogic	Compatible
DirectNet	CCM (GE) Hostlink (TI/Siemens)

A driver created for a compatible PLC will probably work with our PLCs. However, some of our newer CPUs have more memory than similar products offered by previous vendors. If using one of their drivers, make sure you ask if their driver performs memory range checking. If it does, then you may not be able to access all of the memory locations.

Communication protocols

Some vendors may specify a communication protocol instead of a PLC family name. Use the chart shown on this page to help you identify the protocol and PLC port usage.

	CPU/ device	Port	Protocol
DL05 DL06	D0-05	Port 1	K-sequence, <i>Direct</i> NET and Modbus RTU slave
		Port 2	K-sequence slave, <i>Direct</i> NET and Modbus RTU master/slave
	D0-06	Port 1	K-sequence, <i>Direct</i> NET and Modbus RTU slave
		Port 2	K-sequence slave, <i>Direct</i> NET and Modbus RTU master/slave
	D0-DCM	Port 1	K-sequence, <i>Direct</i> NET and Modbus RTU slave
		Port 2	K-sequence slave, <i>Direct</i> NET and Modbus RTU master/slave
DL105	F1-130	Only one	K-sequence slave
	D2-230	Only one	K-sequence slave
	D2-240	Top port	K-sequence slave
		Bottom port	K-sequence and <i>Direct</i> NET slaves
	D2-250-1	Top port	K-sequence, <i>Direct</i> NET and Modbus RTU slaves
DL205	D2-230-1	Bottom port	K-sequence slave, <i>Direct</i> NET and Modbus RTU master/slave
	D2-260	Top port	K-sequence, <i>Direct</i> NET and Modbus RTU slaves
		Bottom port	K-sequence slave, <i>Direct</i> NET and Modbus RTU master/slave
	D2-DCM (module used with D2-240/250-1/260)	Only one	K-sequence slave <i>Direct</i> NFT master/slave Modbus RTU slave
	D3-330	Requires DCU	DirectNET slave
	D3-330P	Requires DCU	DirectNET slave
	D3-340	Top port	DirectNET slave
DL305		Bottom port	DirectNET master/slave Modbus RTU slave
22000	D3-350	Top port	K-sequence and <i>Direct</i> NET slave
		Bottom port	K-sequence slave, <i>Direct</i> NET and Modbus RTU master/slave
	D3-DCM (module used with D3-350 CPU)	Only one	K-sequence slave <i>Direct</i> NET master/slave Modbus RTU slave
	D4-430	Top port (15-pin)	K-sequence slave
		Bottom port (25-pin)	K-sequence and <i>Direct</i> NET slave
	D4-440	Top port (15-pin)	K-sequence slave
DL405		Bottom port (25-pin)	K-sequence and <i>Direct</i> NET slave
	D4-450	Phone jack	K-sequence and <i>Direct</i> NET slave
		Top port (15-pin)	K-sequence slave
		Bottom port (25-pin)	K-sequence slave, DirectNET and Modbus RTU master/slave
	D4-DCM (module)	Only one	K-sequence slave DirectNET master/slave Modbus RTU slave

SIDIRECT: System Integrator Program

Do you need local service and support for your AutomationDirect equipment?

Would you like help planning and installing an AutomationDirect project?

Check out SIDIRECT. The AutomationDirect **System Integrator Program!**

To extend our award-winning customer service and support into the field, we've formed a team of qualified system integrators who are ready to help. Whether you need an integrator to design, build, and install your next automation project, or someone to troubleshoot your existing machinery, simply contact one of our authorized system integrators. You can be

assured you're dealing with a company that has the expertise and experience to tackle your automation challenges.

View our list of integrators at www.automationdirect.com/si or use the link on our homepage to access the System Integrator section. There, search for integrators by geographical region, product expertise or industry experience.

Not sure which integrator is right for your particular project? We'll be happy to assist you; just email us at systemintegration@automationdirect.com.

Attention Integrators!

Are you a reputable system integrator with a proven history of installing and servicing Automation Direct components? If so, think about joining our team of integrators! At www.automationdirect.com/si, you can take a look at SIDIRECT, our authorized System Integrator Program. There you can view the benefits and requirements associated with becoming an authorized SI, and submit

an application.

If your company has expertise with our wide array of industrial control components, and wants to enter into a mutually beneficial relationship with Automation Direct, we want to hear from you!

Training Courses and Information

Training by seasoned veteran Doug Bell of InterConnecting Automation, Inc.

Do you need training courses for PLCs or drives, taught by someone who has used many of our products to solve difficult, realworld application problems? Would you be even more interested if the training was held in a city near you? We thought so!

For the most current schedule, visit the InterConnectingAutomation website:

www.interconnectingautomation.com

If your city isn't listed there, or if you need an on-site class, custom class etc., then please call the folks at InterConnecting Automation. They can usually create a class to suit a wide variety of special requirements.

Mr. Doug Bell of InterConnecting Automation, Inc., has been using both our products and competitive products for over 25 years. He has years of design and consulting experience, has been the focus of PLC magazine articles, and now offers training classes taught at various locations around the country.

Mr. Bell started his career as an Electronics Technician on the factory floor at Crown Cork & Seal, one of the world's premier suppliers of cans and closure systems. So, he can relate to the day-to-day problems associated with using and troubleshooting PLC systems. After his stint at Crown, he established a very successful firm that designs and implements control applications, including programming and startup. Here's a brief list of Mr. Bell's qualifications and applications experience:

- Over 25 years of experience in PLC and control system design, for more than 45 facilities worldwide, including sites in the U.S., France, Germany, England, and Mexico
- Managed various automation projects, including specification, procurement, programming, site startup and maintenance
- Applications experience, including electronic feeder controls, HVAC controls, automated test stations, coating systems, printing lines, motion control systems, high-speed applications, communication systems, device-level network applications, PC-based control solutions, HMI systems, etc.
- Experience in training both factory technicians and operations personnel

Note: PID class may be taught by guest instructors chosen by Mr. Bell.

AUTOMATIONDIRECT does not set prices or take reservations for these classes. For additional information, course prices, schedules, reservations, contact:

InterConnectingAutomation 12154 North Ridge Trail Hales Corners, WI 53130

Phone: 414-425-8348 Fax: 414-425-8363

E-mail:

info@interconnectingautomation.com

Website

www.interconnectingautomation.com

Introductory PLC course contents

You'll use custom-built training panels that contain our D4-450 CPU, a variety of I/O modules, operator panels, and *Direct*SOFT.

- PLC family overview for all *Direct*LOGIC products
- Basic PLC theory of operation including CPU, bases, discrete I/O, analog I/O, and communications
- System configuration techniques
- Simple RLL programming including timers, counters, drums, basic math, and more.
- Advanced programming including number conversions, subroutines, RLL Plus, PID theory, etc.

Advanced PLC contents

Using training panels that contain our D4-450 CPU, a variety of I/O modules, operator panels, and **Direct**SOFT, you will:

- Create programs based on specs given to you in class
- · Learn table and pointer commands
- Wire, program and use Terminator and 205 remote I/O
- Writing and structuring programs using Stage
- Debug, diagnose and program PLC over cell phone

Networking

- Serial RS-232 and RS-422
- Ethernet
- MAC-IP-PLC-Addressing
- · Networking with multiple PLCs
- Control motor speed from a master PLC to a slave w/motor/encoder setup
- Learn to use Read and Write commands and the wiring of a network

PID course contents

You'll use custom-built training panels to:

- Learn PID short cuts and tools
- Learn to setup, tune, troubleshoot and debug PID loops.
- Adjust the gain, reset, rate, and many other PID parameters, to see how they affect the loop

e36-24 Appendix 1 - 8 0 0 - 6 3 3 - 0 4 0 5

Training Videos and Online Training

INTERCONNECTING AUTOMATION

"Introduction to PLC Logic and Principles" Training Video Set

Mr. Doug Bell of InterConnecting Automation, Inc., offers a basic PLC video training package.

The kit includes the following:

- Two video tapes showing examples of programming with *Direct* SOFT. You can get "Hands-On" experience by following along with the instructor who is using the same hardware. (*Direct* SOFT V2.4a, or later,can be used with this course.)
- Pre-wired PLC trainer based on the AUTOMATION DIRECT D0-05AR PLC, with pushbuttons, lights, selector switches and a programming cable ready to plug into your computer
- A DL05 Users Manual, which is referred to throughout the video and is great for future reference

Benefits of this video course:

- Work in the privacy of your own home/office
- No need to travel anywhere your family won't have to do without you!
- Learn at your own pace take a break when you need it
- Refer to the video at any time you'll still have the hardware to experiment with

Overview of course content:

- Basics: introduction, basic wiring, logic AND & OR, sensors, relays, reasons for using a PLC, AUTOMATION DIRECT PLC families
- CPU Internals: scan time, addressing, I/O (Xs and Ys), commands
- I/O: inside the I/O boards, octal addresing, programming methods -- hand-held programmer - *Direct* SOFT
- Direct SOFT: getting started, the launch pad, links, offline vs. online programming, maneuvering through & using Direct SOFT, creating and editing rungs
- Programming & Debugging: using inputs and outputs, debugging and status mode, PLC commands, troubleshooting

"PLC Analog I/O" Training Video Set

Mr. Doug Bell of InterConnecting Automation, Inc., offers a PLC Analog I/O training video set.

The kit includes the following:

 Two 2-hour analog training videos, firmware upgrade instructional video, a pre-wired analog trainer and DL05 analog I/O module and manual. This unit is a "plug-and-play" add-on to the DL05 PLC Trainer or any existing DL05 PLC.

PLC Pre-wired Analog I/O Trainer:

- Two 0-10 VDC meters
- Two 0-5 VDC potentiometers
- 24 VDC wall-mount power supply
- DL05 analog combo module, plus prewired cable from the trainer to the module, ready to plug into your DL05 PLC trainer or any existing DL05 PLC.

Benefits of this video course:

- Work in the privacy of your own home/office
- No need to travel anywhere your family won't have to do without you!
- Learn at your own pace take a break when you need it
- Refer back to the video at any time you'll still have the hardware to experiment with.

Overview of course content:

- Analog I/O principles voltage, current, thermocouples
- PLC analog modules input, output, thermocouple
- \bullet Configuring the analog I/O modules in the PLC
- DL05 PLC analog tutorial includes configuration, wiring, scaling (standard and nonstandard) and programming, using the potentiometers and voltmeters on the trainer unit
- Application programming examples, including controlling motor speed with a drive and an analog output card in a PLC

To order the PLC Logic and Principles video or the PLC Analog I/O video, contact InterConnecting Automation directly at: 414-425-8348, or online at www.interconnectingautomation.com

Inexpensive online PLC training now available

Interconnecting Automation offers an inexpensive subscription-based online training program. The online training section is a component of www.interconnectingautomation.com.

Visitors can view the complete list of videos in each "library" as well as watch sample videos; when ready to purchase, the prospective member registers and pays for their selected libraries on a monthly basis. The member receives unlimited access from a maximum of two PCs anytime during the 30 days; videos can be viewed as many times as needed during the subscription period. Most libraries range from \$29.95 - \$39.95 per month.

Libraries currently available include:

- Introduction to PLC Principles (For the novice-non user with limited controls knowledge)
- CLICK series PLC Training (includes Introduction to PLCs library)

Future libraries include Productivity3000 Training (includes Introduction to PLCs library) and C-more HMI training.

Many of these video libraries will also be offered as interactive training courses, with progress tests and certification upon completion.

For more information, to view sample videos or register for a subscription, visit:
