Displaying a Program

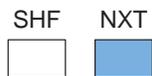

Since the Handheld displays the mnemonic instructions, you can step through the individual program instructions. If the CPU is in the RUN mode, the status of the instruction is also displayed in the status display area.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000
0001	OR 001	Joins 001 in parallel with 000
0002	STR 002	Starts branch 2 with 002
0003	STR 003	Starts branch 3 with 003
0004	ANDN 004	Joins 004 (NOT) with 003
0005	ORSTR	Joins branches 2 and 3
0006	AND 005	Starts branch 4 with 005
0007	ORN 006	Joins 006 (NOT) in parallel with 005
0008	ANDSTR	Joins branches 4 and 5 with 1-3
0009	OUT 050	Stores the output and finishes the network
0010	END	Ends the program

Finding a Specific Instruction

If you do not want to scroll through the program, you can use the Search feature to automatically search for an instruction. The following example shows the instructions, addresses, and corresponding Handheld displays for a small program.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000
0001	OR 001	Joins 001 in parallel with 000
—	—	—
0006	AND 005	Starts branch 4 with 005

Finding a Specific Address

You can also search for a specific address. The following example shows the instructions, addresses, and corresponding Handheld displays for a small program.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000
0001	OR 001	Joins 001 in parallel with 000

PWR CPU	3 (NOT)	7 (SR)	3 (RST)	7 (REG)

Changing an Instruction

Sometimes you need to change an instruction. For example, you may want to use a different input or output point than the one originally entered into the program. The following example shows the instructions, addresses, and corresponding Handheld displays for a small program.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000
0001	OR 001	Joins 001 in parallel with 000
—	—	—
0006	AND 005	Starts branch 4 with 005

PWR CPU	3 <input type="button" value="NOT"/>	7 <input type="button" value="SR"/>	3 <input type="button" value="RST"/>	7 <input type="button" value="REG"/>

Inserting an Instruction

Use the INSERT feature to add an instruction to the program. Insert adds an instruction *before* the instruction being displayed, so make sure you are at the correct program address. Once you've inserted the new instruction, the remaining addresses increment. The following example shows the instructions, addresses, and corresponding Handheld displays for a small program.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000
—	—	—
0006	AND 005	Starts branch 4 with 005
	Insert AND 007	Adds 007 in series with 005

3	7	3	7
NOT	SR	RST	REG

Inserting an END Statement

There may be times when you need to insert an END statement (*before* an address) in the program. This is commonly done when you only want to check a portion of the program during machine startup or troubleshooting. You use the INSERT feature, but since the Handheld does not have an END key, special keystrokes are required.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000

0006	AND 005	Starts branch 4 with 005

Deleting an Instruction

Use the DELETE feature to remove an instruction from the program. Delete removes the instruction being displayed, so make sure you are at the correct program address. Once you've deleted the instruction, the remaining addresses decrement. The following example shows the instructions, addresses, and corresponding Handheld displays for a small program.

Mnemonic Listing and Addresses

ADDRESS	INSTRUCTION	DESCRIPTION
0000	STR 000	Starts branch 1 with 000
