Appendix C: Mounting Clips Prior April 2006

Introduction

The mounting clips supplied with C-more touch panels after April 2006 are slightly different than the original clips. Appendix C: Mounting Clips Prior April 2006 has been included in the Hardware User Manual for the end user to have a reference to the drawings and information pertaining to the original mounting clips. The enclosure mounting thickness range and screw torque range has remained the same for each type of touch panel. The basic physical construction and use of the mounting clips remains the same, as does the various touch panel cutout dimensions.

The 6” touch panels use two long style mounting clips. The new 6” mounting clips have been redesigned to increase rigidity and also the screw position height has been increased to allow easier placement in the touch panel slots on thicker enclosures.

The 8”-15” touch panels, depending on the panel’s size, use either 6 or 8 smaller style mounting clips. The new 8”-15” mounting clips have been made shorter in height to allow easier installation. Their rigidity remains the same.
