OPERATION MODE	FUNCTION ILLUSTRATION	FUNCTION STATEMENT
Left-Right Timer (mod: LR)	<p>R1: </p> <p>R2: </p> <p>U/t: </p>	Initially first relay is energized. After the adjustable time delay ton, relay is de-energized. Both relays are de-energized during adjustable time delay toff. At the the end of toff, second relay energizes. Second relay stays in this position during ton. When ton finished both relays are de-energized. This cycle is repeated continuously.
Star-Delta Timer (mod: SD)	<p>Rλ: </p> <p>RΔ: </p>	When energy applied to device, star relay is energized until the end of the adjustable tλ time. At the end of the adjusted delay time tλ-Δ, delta relay is energized until the device is powered off.
