

SCR - Viper Safety Relays

SCR-73-i

The new generation of safety relays from IDEM

Single or Dual channel operation

Monitored Manual or Auto Start/Reset

7 Safety output contacts
3 Auxiliary output contacts

Contactor feedback check

Easy diagnosis of status via 6 LEDs

24Vac/dc operation

Up to PLe, SILCL 3, Category 4

45mm DIN rail mounting

Emergency stop and guard interlock monitoring

Output expansion units available to increase number of outputs.

The Viper Safety Relays range from IDEM are designed to meet the latest safety standards and offer enhanced LED diagnostics and simplified wiring. Applications include safety interlock switches, emergency e-stop devices, door guard monitoring.

The Viper Safety Relays range includes output expansion units that can be directly wired to SCR-73-i safety relay to increase the number of safety output contacts. The expansion modules are available with either immediate or time-delayed output contacts.

The SCR-73-i internal logic uses force guided relays to achieve cross monitoring, this ensures that a single fault does not lead to the loss of the safety function and that all faults are detected at or before the next safety demand.

Functional Description

When the control line inputs are closed and the start/reset condition has been met the safety output contacts close. The safety relay outputs open when the inputs are de-activated or if there is a power failure. When dual channel inputs are used it is not necessary to synchronise switching of the input channels.

When operating in the monitored manual reset configuration the reset button must perform a make-then-break action before the safety relay will activate. External device feedback contacts can be monitored via the reset loop.

Electrical Connection

- A power supply unit with electrical isolation from the mains supply must be connected.
- External fusing of each safety output contact is necessary, a 4A slow-blow or 6A quick action must be provided.
- The maximum cabling and connecting resistance of control lines must not exceed 300 ohms.

Mounting	Any position

SAFETY WARNINGS

- Installation should only be carried out by competent and authorised personnel and in accordance with the instructions in this manual.
 - Only make electrical connections when the device is isolated from the main supply.
 - If "Automatic Start" is selected be aware that safety output contacts will switch immediately after the power supply is connected.
 - Opening the device will void the warranty. Never attempt to repair any device.
 - Adhere to Safety Checks.
 - **DO NOT DEFEAT, TAMPER, OR BYPASS THE SAFETY FUNCTION. FAILURE TO DO SO CAN RESULT IN DEATH OR SERIOUS INJURY.**
- L'installation doit être effectuée par un personnel compétent et autorisé et en conformité avec les instructions de ce manuel.
 - faites uniquement des connexions électriques lorsque l'appareil est isolé de l'alimentation principale.
 - Si "Démarrage automatique" est sélectionné être conscient que les contacts de sortie de sécurité passeront immédiatement après l'alimentation est connectée.
 - Ouverture de l'appareil annule la garantie. Ne jamais tenter de réparer tout appareil.
 - Adhérer à des contrôles de sécurité.
 - **NE DÉFAITE PAS, SABOTAGE, OU DE CONTOURNER LA FONCTION DE SÉCURITÉ. MANQUEMENT À S'Y PEUT ENTRAÎNER LA MORT OU DES BLESSURES GRAVES**

Installation and Maintenance

Installation should as per EN 60204-1 in addition to any local regulations. The safety relay should be mounted inside a cabinet enclosure and on a 35mm DIN rail according to DIN EN 60715. No maintenance is required, there are no serviceable parts. (Refer to Safety Checks). The product is designed to be a component of a customised safety orientated control system. It is the responsibility of the user to ensure the correct overall functionality of its systems and machines. IDEM, its subsidiaries and affiliates, are not in a position to guarantee all of the characteristics of a given system or product not designed by IDEM.

Information Regarding UL 508

Safety Checks:

1. Ensure the appropriate safety level is achieved for the application function.
2. The safety functions must be tested regularly. For applications where infrequent use is foreseeable, the system must have a manual function test. At least once per month for PLe Cat3/4 or once per year for PLd Cat3 (ISO13849-1 / ISO14119).
