Safety Technique

SAFEMASTER STS Safety Switch- and Key Interlock System SX-1GATE-SET-

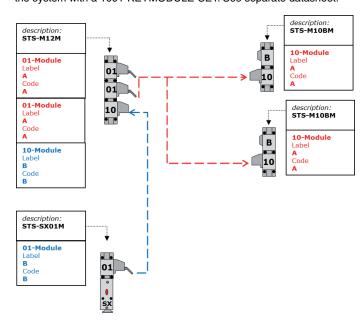

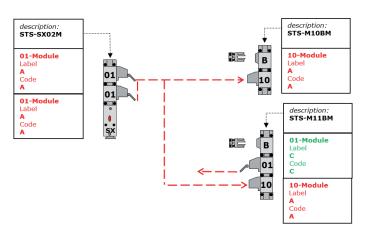

Example: SX-1GATE-SET

Options

If a key exchange box should be used this can be achieved by upgrading the system with a 1001-KEYMODULE-SET. See separate datasheet.

If a safety key for personal protection against being locked in is required a 01-SAFETY-KEY-SET can be added to the mechanical gatelock M10BM. See separate data sheet

STS-System Benefits

- TÜV certificate according to the legal and standard requirements
- For safety applications up to PLe/Category 4 according to EN/ISO 13849-1
- Modular and expandable system
- Rugged stainless steel design
- · Wireless mechanical safeguarding
- Combines the benefits of safety switch, solenoid locking and key transfer in a single system
- · Easy installation through comprehensive accessories
- Protection against lock-in

Features SX-1GATE-SET-

The unit is particularly suitable for applications with:

- · Several mechanically secured entries
- ATEX areas (whereby the STS-SX01M is installed outside the ATEX area and the downstream mechanical units M10BM inside the ATEX area)
- Single-channel/ redundant/ diverse safety circuits
- Rugged ambient conditions

Approvals and marking

Application

Preferred use in machinery and plant engineering to secure separating guards such as safety gates and hoods in connection with additional STS units and SAFEMASTER products in the system.

Design and Operation

Attention!

Hazards must be ruled out before a key can be removed at any time and the movable part of the guard can then be opened!

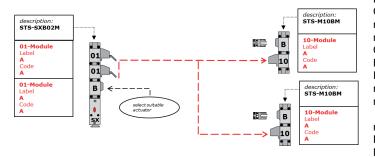

The STS switch unit must be integrated into a system and connected with a control unit so that the hazardous machine can only run when the guard is locked and closed.

The machine can only be restarted after the key was returned to its original position. Key removal is queried by the contacts of key monitoring.

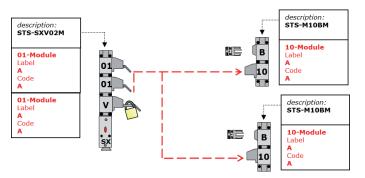

This gate securing system is available for 1 door. It consists of 1 SX01M module and of 1 M10BM unit. The SX01M module is monitoring that the key is in place in order to operate the machine. Extracting one key will immediately switch the contacts of the SX01M unit, stopping any dangerous movement. With the extracted key, the operator moves to the gate. Inserting the key into the mechanical gatelock M10BM will open the gate. As long as the gate is open, the key cannot be extracted. After closing the gate the key can be returned to the SX01M unit and by inserting the key the machine can be restarted.

Options

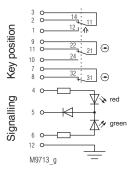

If the SX...M Switch should be mounted directly on the gate already securing the main entrance gate, a B-ACTUATOR-SET can be added allowing to secure 3 gates with an SX-2GATE-SET. see separate datasheet.

If the more people need to enter the dangerous zone they can secure themselves using personal padlocks, when a PADLOCKMODULE-SET is added to the SX...M Switch.. see separate datasheet.

Switching logic

Technical Data

Enclosure: Stainless steel V4A / AISI 316L

IP 65 Degree of protection:

- 25 °C to + 65 °C Temperature range: Storage temperature: - 40 °C to + 80 °C

Mechanical principle: Rotating axis with redundant operation

Connection method: Cage tension spring clamps

min. connection cross-section: 0.25 mm² max. connection cross-section: 1.5 mm² Cable entry: 1 x M20 x 1.5

2 x 106 switching cycles B10_d: Electrical service life: 5×10^6 switching cycles

min. operating speed: 100 mm/s max. operating speed: 500 mm/s

(by exception, 1500 mm/s is permitted) max. switching frequency: 360/h AC/DC 24 V Nominal voltage U,

Nominal voltage range: 0.85 ... 1.1 U_N 0.3 W Power consumption: Rated impulse voltage: 0.8 kV Rated insulation voltage: < 60 V

Contacts: 1 NC contact, 2 diverse changeovers

contacts

Switching principle: Changeover contact with forced-opening

snap-action switch

max. operating current: Short circuit strength,

4A gG max. fusing: Contact material: Ag / AgSnO₂

Indicator LED red/green, separate selection

2 A

possible

Test principles: EN ISO 13849-1:2008 EN 1088+A2:2008

EN 60947-5-1:2005 GS-ET 19:04.2004

Intended use: up to max. cat. 4, PL e according

to EN ISO 13849-1 according to DIN EN 50041 IEC EN 60947-5-1 Appendix K

Diagnostic coverage (DC),

(mechanical):

Mounting: Contact elements:

Logic and output cat. 3 cat. 4 cat. 2 STS-SX01M 97 % 99 % 99 %

Fault exclusions: none

Protection against faults of common cause: see table in STS design guide Repair and replacement: by manufacturer only

semi-annually recommended

min. once a year

Available sets:

Test intervals:

SX-1GATE-SET SX-2GATE-SET SX-3GATE-SET SX-4GATE-SET

SX-5GATE-SET

Actuators to be ordered separately 1 for each B-module:

S-ACTUATOR **C-ACTUATOR CS-ACTUATOR**
