

OPT2429

Part Number

Technical Data

- **Affordable accessories**

OPT2428 and OPT2429 are dome accessories for ring lights. These attachments can turn the diffuse ring light into a very homogeneous dome light, ideal for illuminating shiny surfaces and inspecting texture changes on surfaces, such as laser engraved codes. Thanks to the hole aperture adapters, the diameter of the camera hole at the top of the dome can be decreased to minimize dark spots on high-gloss surfaces. The hole aperture adapters are included in the scope of delivery of each dome attachment as standard. The attachments have an integrated magnetic holder for easy attachment and removal. Once the final mounting has been selected, the attachment can be mounted with 4 × M3 Allen screws, which are also included in the scope of delivery.
