

OPT2430

Part Number

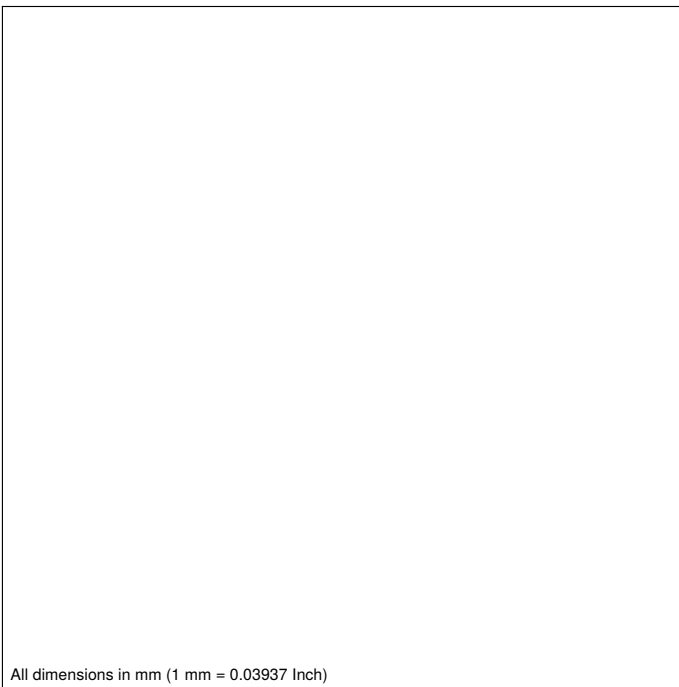

Technical Data

- **Affordable accessories**

OPT2430 and OPT2431 are low angle attachments for LMRX series ring lights. These attachments can transform the diffuse ring light into a very homogeneous low angle (45°) illumination, ideal for illuminating shiny surfaces and examining details such as scratches or edges. The attachments have an integrated magnetic holder for easy attachment and removal. Once the final mounting has been selected, the attachment can be mounted with 4× M3 Allen screws, which are also included in the scope of delivery.
