

# Flat Dome Light

White light, 300 × 300 mm

## OPT2437

Part Number

- Easy and flexible installation
- High homogeneity
- High performance: high intensity even in continuous mode
- No external control required

The flat dome lights are highly diffused lights with a camera viewing port. Due to their intense luminous flux and high homogeneity, they are perfectly suited for large-area applications such as robot-assisted pick and place. They can be used in continuous mode or synchronized with the Machine Vision Camera in strobe mode via PNP or NPN inputs. The illumination is extremely homogeneous with very narrow edges (4 mm), so the usable surface is very large and integration is very easy – thanks to the T-slot mounting and anchor points around the housing. The housing is designed like an LED backlight, but has a camera hole in the middle for positioning the camera.
