# **IEC Limit Switches**

## **Metal Housing Side Rotary Lever Actuator AAM Series**

- Small body allows mounting in tight spaces
- Durable cast metal housing
- Single conduit 1/2" NPT opening or 5-pin M12 quick-disconnect
- 1 N.O. and 1 N.C. contact on all units
- Snap-action (Z11) contacts

1. Minimum temperatures assume that the atmosphere is free of moisture, which could cause moving parts to freeze up.

5. Slow-action contacts must not be operated at very low speeds because of the tendency to maintain the arc if contacts are not rapidly separated.

www.automationdirect.com Limit Switches tLSW-102

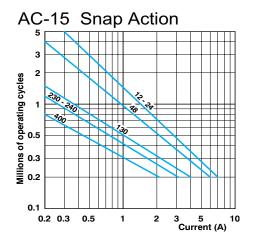

<sup>2.</sup> Some types of actuators, such as a long, heavy spring with the adjustable actuator fully extended, may not work properly if installed in a horizontal position.

<sup>3.</sup> Positive opening in a snap-action contact block is performed by a rigid mechanism that forces the N.C. contact to open in case the snap action mechanism fails. This would provide protection if, for example, the contacts became "welded" together by excessive current rush. Generally, positive opening is not considered to work properly on switches with actuators that are not a solid design (such as a spring or rubber roller), despite the fact that the contact block itself has positive opening. In order to be considered as having positive opening, a switch must not have flexible components between actuator actioning points and the electrical contact.

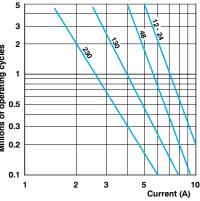

<sup>4.</sup> This is the speed at which snap-action contact blocks are tested. There is no minimum operating speed for snap-action contacts because the speed has no influence on the switch action. When using spring actuators, the changeover time may vary from 1ms to 3ms from maximum to minimum operating speed.

#### Limit switch types

Snap-action contact: A contact element in which the contact motion is independent of the speed of the actuator. This feature ensures reliable electrical performance even in applications involving very slow moving actuators.

Slow-make/slow-break contacts: A contact element in which the contact motion is dependent on the actuator speed.

## Changeable working heads (E42, E52, E71)

View of cam insert when looking at bottom of head once removed from switch body.

To change position, push in and twist until it locks into place

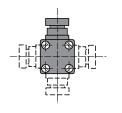

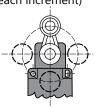

Positioning - 90° each way

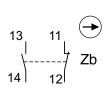

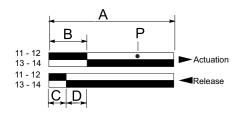

Adjustable lever from 0-360° (6° each increment)

## **Contact Displacement Values**

# Z11 Snap Action Contacts 1 N.O. and 1 N.C.

- A = Max. travel of the operator in mm or degrees
- B = Tripping travel of both contacts on actuation
- C = Tripping travel of both contacts on release
- D = Differential travel (between actuation and release)
- P = Point from which positive opening is assured during actuation

Contact Displacement Values tables continued on next page

# **Contacts Configuration** and Bar Charts

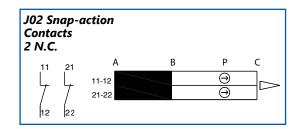

- A = Max. travel of the operator in mm or degrees
- B = Tripping travel of both contacts on actuation
- C = Tripping travel of both contacts on release
- D = Differential travel (between actuation and release)
- P = Point from which positive opening is assured during actuation

# **IEC Limit Switches Accessories**

### **Replacement Contact Blocks**

Easily-installed replacement contact blocks fit both heavy-duty IEC and double-insulated limit switches, including mini-DIN models.

Note: Limit switches come standard with snap-action contacts (<u>AGZ11-SWITCH</u>.) To replace contact block, remove limit switch cover. Carefully remove old contact block and install replacement. Contact blocks are supplied with an adapter to fit into larger ABM and ABP switches. Remove this adapter when installing contacts in mini-DIN AAP models.

| Replacement Contact Blocks |                              |                                           |                      |  |  |  |
|----------------------------|------------------------------|-------------------------------------------|----------------------|--|--|--|
| Part Number                | rt Number Price Contact Type |                                           | Action               |  |  |  |
| AGZ11-SWITCH               | \$88c:                       | Snap action (1) N.O. and (1) N.C.         | 3ms change-over time |  |  |  |
| AGZ02-SWITCH               | \$88b:                       | Snap action (2) N.C.                      | 3ms change-over time |  |  |  |
| AGX11-SWITCH               | \$889:                       | Slow action (1) N.O. and (1) N.C.         | Break before make    |  |  |  |
| AGY11-SWITCH               | \$88a:                       | Slow action overlay (1) N.O. and (1) N.C. | Make before break    |  |  |  |
| AGW02-SWITCH               | \$887:                       | Slow action delay (2) N.C.                | Simultaneous         |  |  |  |
| AGW20-SWITCH               | \$888:                       | Slow action overlay (2) N.O.              | Simultaneous         |  |  |  |

Note: See the Bar Charts page of this section for more information.

# Replacement actuator levers for heavy-duty IEC models

Easily-replaceable actuators for E42 and E52 model limit switches.

Note: These models have an E42 or E52 in the part number, for example, ABM1E42Z11.

AGE52-LEVER

(Replacement lever shown installed on <u>ABM5E52Z11</u> limit switch)

AGE54-LEVER
