FAZ Series Supplementary Protectors

FAZ Supplementary Protectors are UL 1077 recognized for applications where branch circuit protection is not required or is already provided. They are thermal magnetic and protect against short circuit (see ratings chart) and overload conditions.

These DIN-rail mounted supplementary protectors come in one, two and three pole configurations and are available in three trip curves.

The B curve magnetic trip point is 3 to 5 times the rated current and is typically used for computers and electronic loads with very low current loads.

The C curve magnetic trip point is 5 to 10 times the rated current and is typically used for small transformers, pilot devices, etc.

The D curve magnetic trip point is 10 to 20 times the rated current and is typically used for transformers or with very high inductive loads.

Shunt trips are available for remotely tripping the protector with an external voltage from a control system or alarm device.

A padlocking feature is also available for preventing unauthorized operation. Maintenance personnel can safely work on protected equipment without electrical safety concerns.

Overview

The Eaton FAZ supplementary protectors are used to provide overcurrent protection where branch protection (for example, UL 489 MCCB) is already provided or not required. The units can be installed as a component within, or as a part of an appliance or a piece of electrical equipment. Supplementary protectors are ideal replacements for fuses that are applied as a supplementary protector, i.e. in addition to branch protection (if required). They are 35mm DIN-rail mountable, utilizing spring clips. These are standard protectors, recognized by UL and CSA under UL 1077 and CSA 22.2. They are CE marked in accordance with Low Voltage Directive (LVD) (73/23/EEC).

Product Specification

The FAZ supplementary protector is a dual-rated product for both AC and DC supplies, in accordance with UL 1077 and CSA 22.2 standards and is marked with CE in accordance with the Low Voltage Directive. With this dual standard product, you can include it in your design, knowing that in most cases wherever your equipment is used, the product will conform to the local UL, CSA or IEC (International) requirements.

The supplementary protector is designed to be applied in conjunction with a branch circuit protector (if branch protection is required) and can be a replacement for similarly applied fuses. Its advantage over fuses is that it is resettable and the device's status is easily and clearly identified by the position of the handle and the flag indicator.

In addition, you can select a device that provides maximum reliability and accuracy to fit various applications due to the availability of a wide range of current ratings from 0.5 to 63 amperes in three overcurrent characteristic curves, B, C and D.

Features and Benefits

- Dual rated for AC or DC Applications
- Box terminals accept #18 to #4 wire (1 to 25mm²) for one wire connection or #18 to #8 for two wire connection.
- Thermal magnetic overcurrent protection: three levels, categorized by B, C and D curves in direct relation to continuous rating of the device
- **B curve magnetic trip point:** 3 to 5 times the rated current, typically used for computers and electronic loads with very low inrush currents (PLC

wiring).

- **C curve magnetic trip point:** 5 to 10 times the rated current, typically used for small transformers, pilot devices, etc.
- **D curve magnetic trip point:** 10 to 20 times the rated current, typically used for transformers or devices with very high inductive loads.
- Trip Free Design: Protector cannot be defeated by holding the handle in the "ON" position.
- Module width of only 17.7 mm per pole
- Color coded status indicator window – Red = ON or Green = OFF
- P20 finger protection
- 35mm DIN-rail mountable, utilizing spring clip
- Captive screws cannot be lost
- Suitable for reverse feed applications

Listings

- UL recognized under UL 1077 Category QVNU2 File E177451

- IEC/EN 60947-2

Applications

FAZ Supplementary protectors are recognized per UL 1077 and certified per CSA C22.2 No. 235 as a Supplementary Protector and can be fully utilized per the NEC and CEC Codes in that capacity. For international purposes, the entire FAZ family is CE marked and in full conformity with the applicable IEC standards for miniature circuit breakers, EN/IEC 60898 and IEC/EN 60947-2.

Outside North America, they can be used in both residential and industrial applications as feeder and branch circuit

www.automationdirect.com

protective devices. In North America, most European Miniature Circuit Breakers are only UL recognized and CSA certified as "Supplementary Protectors", meaning they cannot be utilized as feeder or branch circuit protective devices per the local electrical codes (2008 NEC 240.10 and CEC Part 1 C22.1). This commonly restricts their use to applications where "closer" protection is desired than that offered by a branch circuit protection device.

Eaton FAZ Supplementary Protectors are

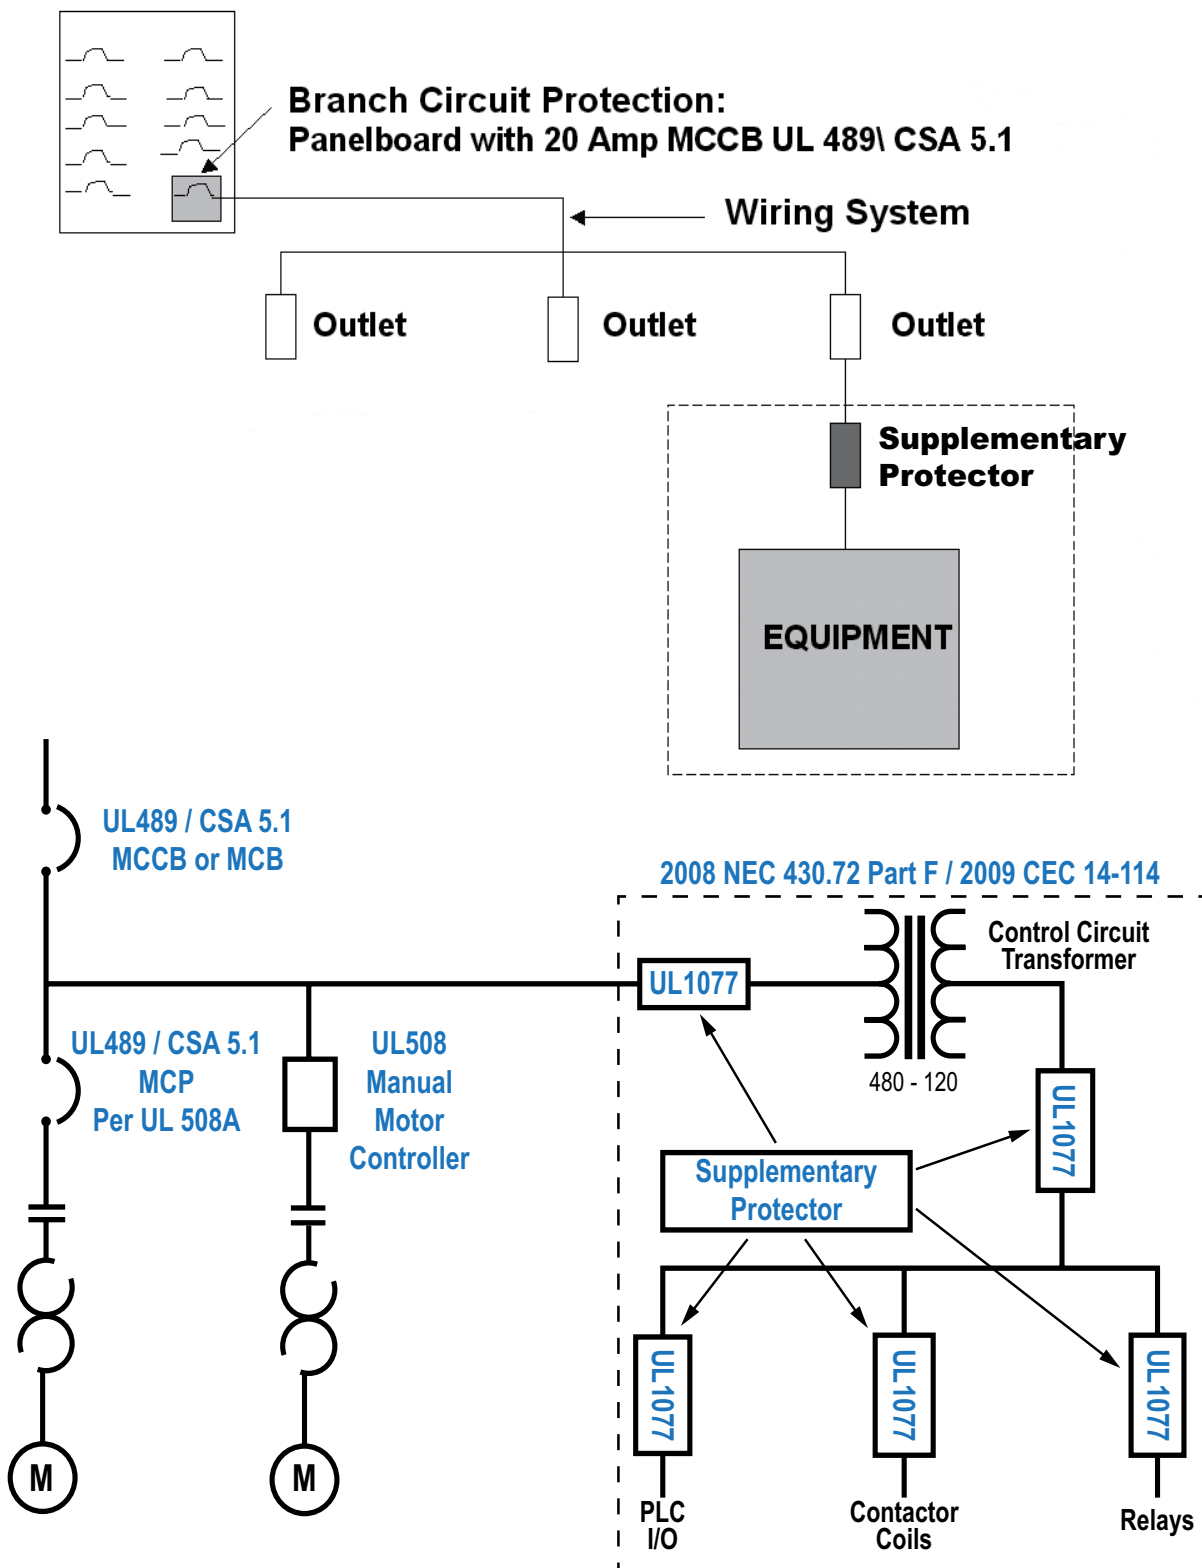

ideal for providing protection in many applications, including:

- Control power transformers (D curve)
- Relays
- Contactor coils
- PLC I/O points
- Lighting circuits
- Power supplies
- Computers
- Electronic equipment
- Control circuits

Circuit Protection

tCPR-100

Supplementary Protectors Sample Applications

Supplementary protectors are not to be used in feeder circuits or motor circuits. Use them only in applications where branch protection is already provided or is not required.

Ampere Rating	Conductor Size		Tightening Torque
0.5 - 63	1 wire	0.75 to 25mm ²	21.2 lb·in (2.4 N·m)
	2 wires	0.75 to 10mm ²	

*A circuit breaker with a 480Y/277 VAC rating can be applied in a solidly grounded circuit where the nominal voltage of any conductor to ground does not exceed the lower value of the circuit breaker's rating (e.g., 277VAC) and the nominal voltage between any two conductors does not exceed its higher value (480VAC). These ratings typically can be found on protective devices such as molded-case circuit breakers and self-protected "Type F" combination motor controllers.

EAT•N FAZ Series Accessories

Protective Accessories

FAZ Series Protective Accessories			
Part Number	Description	Quantity	Price
ZIS-SPE-1TE-3	Lockout attachment for Eaton FAZ series supplementary protectors and FAZ mini circuit breakers, suitable to prevent unauthorized activation of a de-energized circuit, accepts lock shackles up to 9/32 in. (7.1 mm) in diameter	3 per pack	\$0?_#:
BBIP-5	Busbar protection shroud, covers up to 5 unused terminals (break off unused pieces to size), for use with Eaton BBUL series busbar.	10 per pack	\$0?y9:
BBIP-5-5		5 per pack	\$0?y8:

ZIS-SPE-1TE-3
Lockout Attachment

Busbar System

Without auxiliary contacts

BBUL Series Busbars for use with FAZ Series Supplementary Protectors				
	Description	Rated Operational Current	Qty	Price
BBUL25-1P-1M57-SP	Busbar, 1 pole, 57-position, 480VAC	100A, fed from end	1	\$0?ye:
BBUL25-2P-2M56-SP	Busbar, 2 pole, 56-position, 480VAC		1	\$-00?yi:
BBUL25-3P-3M57-SP	Busbar, 3 pole, 57-position, 480VAC		1	\$-00?yj:

Busbar Accessories			
	Description	Qty	Price
BBUL-EC-1	Busbar end cover for use with 1-pole Eaton BBUL series busbar.	10	\$0?y7:
BBUL-EC-1-2		2	\$?y6:
BBUL-EC-3	Busbar cover end for use with 2-pole and 3-pole Eaton BBUL series busbar.	10	\$--6iqi:
BBUL-EC-3-2		2	\$-6iqh:
BBUL-TEPA-35-1	Busbar terminal lug, connects wiring to busbar system, for use with 1-pole Eaton BBUL series busbar, accepts 10AWG to 1/0 AWG copper wire, 115A, 1000V AC/DC.	1	\$0?yc:
BBUL-TEPA-35-3		3	\$0?yd:
BBUL-TEP-35-1	Busbar terminal lug, connects wiring to busbar system, for use with 2-pole and 3-pole Eaton BBUL series busbar, accepts 10AWG to 1/0 AWG copper wire, 115A, 1000V AC/DC.	1	\$0?ya:
BBUL-TEP-35-3		3	\$0?yb:

UL 489 or UL 1077?

What are your Circuit Protection Requirements?

An understanding of circuit types and circuit protection products is critical to ensure their proper application.
See NEC Sections 100, 430 and 409 for definitions.

The proper sizing of an overcurrent protection device is the responsibility of the customer and should be determined using the application standards of the NEC (National Electric Code), CEC (Canadian Electrical Code) or other applicable standards. Per fine print note of 2008 NEC Section 100 "A current in excess of rating may be accommodated by certain equipment and conductors for a given set of conditions. Therefore, the rules for overcurrent protection are specific for particular situations."

UL 489

Branch Protection

UL 1077

Supplementary Protection

What You Need to Know and Look For In Specifications

Certifications – Standards – Acceptance

UL 489 Branch Protection	UL 1077 Supplementary Protection
<ul style="list-style-type: none"> • UL 489 Listed or Recognized • CSA C22.2 No. 5 • International ratings available depending on breaker type 	<ul style="list-style-type: none"> • UL Recognized under UL 1077 • CSA 22.2 No. 285 • IEC 60947-2 or IEC 898
Function	
<ul style="list-style-type: none"> • Opens automatically on Overload and Short Circuit when properly applied within its ratings • Protects wire and cable against Overload and Short Circuit 	<ul style="list-style-type: none"> • Opens automatically on Overload and Short Circuit • Provides additional equipment protection where branch circuit protection is already provided or not required • Not suitable for the protection of branch circuit conductors
Applications	
<ul style="list-style-type: none"> • Branch circuit protection in control panels, panelboards, switchboards and motor control centers • Motor overload and motor short circuit protection (UL 489 Recognized motor circuit protectors) for control panels and motor control centers 	<ul style="list-style-type: none"> • Used within appliances or other electrical equipment such as control circuits, control power transformers, relays, PLC I/O points and lighting circuits • Ideal replacement for fuses that are applied as supplementary protection
Features	
<ul style="list-style-type: none"> • Bolted down or DIN rail mounted • External handle mechanisms available • Field mounted accessories • Stand alone branch circuit protection • Various levels of protection (curve type) • High voltage and interruption levels (up to 100 kAIC @ 480V) 	<ul style="list-style-type: none"> • DIN rail mounted • Field mounted accessories • Various levels of protection (curve type) • 10 kAIC @ 240 VAC • 10 kAIC @ 277 VAC and 5 kAIC @ 480VAC • 10 kAIC @ 48VDC

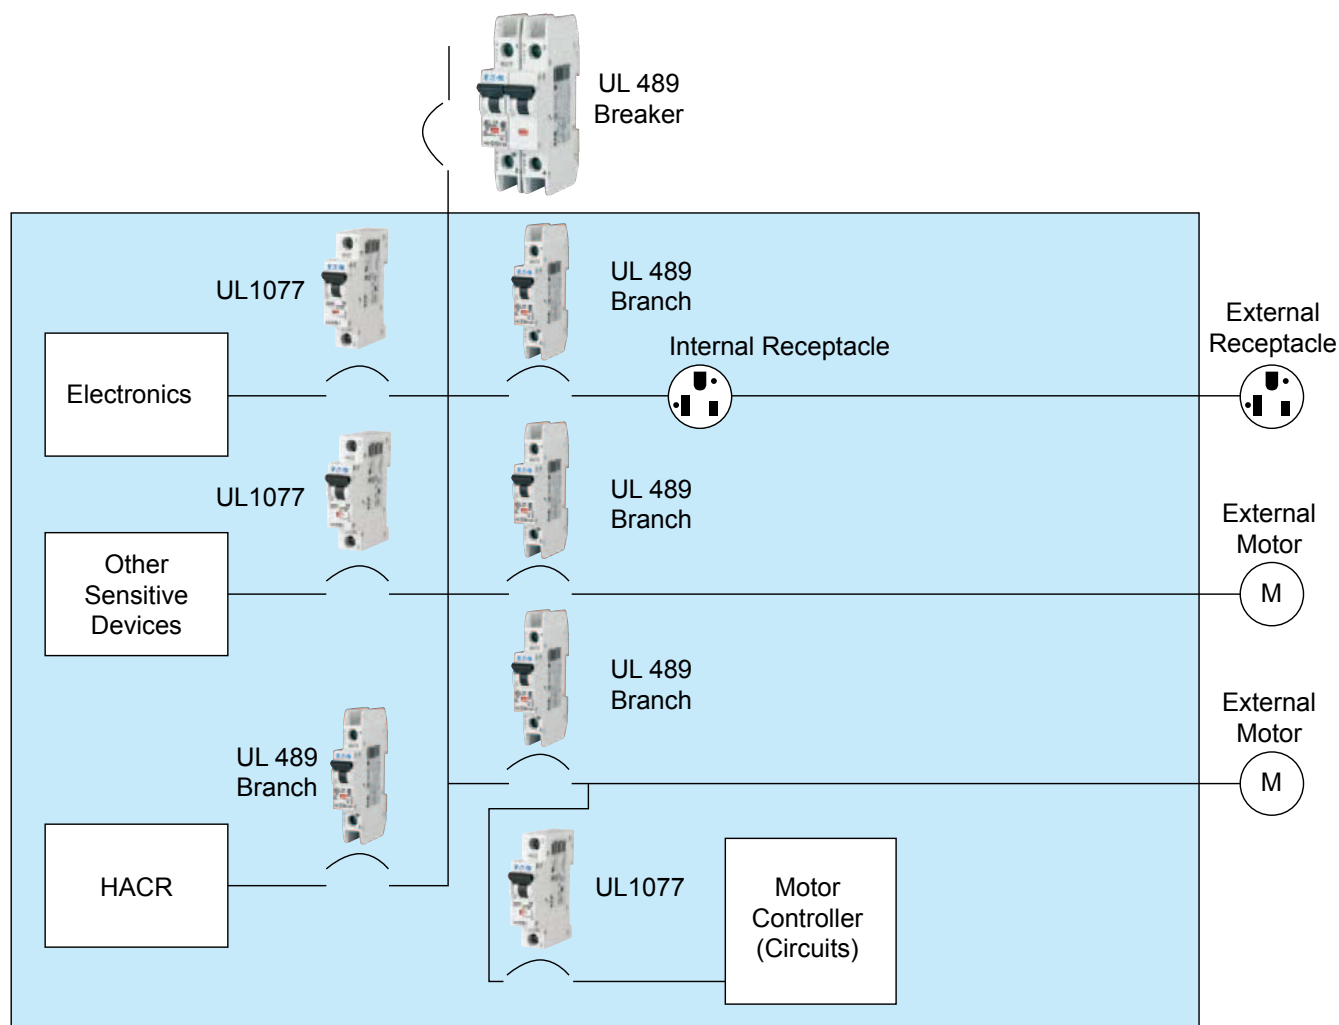

kAIC = thousands of Amps interrupt capacity

Summary

A Supplementary Protector can't be used for Branch Circuit Protection.

Understanding the difference between Branch Circuit Protection and Supplementary Protection helps to ensure their proper use.

UL 1077 Supplementary Protectors and UL 489 Circuit Breakers Application Guidelines

Example of UL 489 and UL 1077 Application

UL489 circuit breakers

Used for branch circuit protection, internal/external receptacles, external motors and HACR equipment (heating, air conditioning and refrigeration).

UL1077 supplementary protectors

Used for overcurrent protection within appliances or electrical equipment, where branch circuit protection is already provided or not required.

Note: UL489 devices can be used in place of UL1077; UL1077 devices cannot be used in place of UL489.
