AutomationDirect is paying close attention to the fast-changing news regarding the spread of COVID-19 (Coronavirus) around the globe. As a result, we are continuing frequent communications with all our suppliers to gain information on the potential effects on our supply chain as quickly as possible.

At this time, we expect to continue to have our normal high levels of product availability to fill customer orders immediately and in the coming months. AutomationDirect carries a significant amount of inventory on hand, and we have additional flow of product in transit from our overseas international suppliers. Most of our suppliers also carry significant inventory amounts of either finished goods or raw materials which helps keep supply continuing without issues. However, some of our suppliers are currently reporting partial supply disruptions caused by work stoppages, resumption of work with partial staff, reduction in production capacity, transportation restrictions, and material shortages. Deliveries from some of our suppliers are also currently being delayed in transit by port and rail congestion. We are continuing to gather details in these instances to assess the effect on our inventory levels, but we still do not expect a significant impact overall.

AutomationDirect generally has sufficient stock in our warehouse to cover for a lack of delivery from vendors experiencing issues related to COVID-19 in the short term, however we do expect to sell out of some items in the following product groups as a result of these interruptions, and estimated replenishment dates are not certain:

- Marathon motors (including stock and direct ship models)
- Edison fuses and fuse blocks
- AutomationDirect ice cube and solid state relays
- Eaton photoelectric sensors
- NITRA pneumatic tubing
- Southwire cable
- SureMotion timing belts, pulleys, and bushings

Please be assured that AutomationDirect will minimize any disruptions in the flow of product within our supply chain, to the best of our ability. Please check our online webstore or contact our customer support team if you need detailed information about quantities available for specific items. Once normal operations resume with these
vendors, we will expedite shipments to fill any potential customer backorders as quickly as possible.

Customer shipments and supplier deliveries continue to be processed as normal using recommended health and safety practices. AutomationDirect remains fully open for business with all our teams ready to serve you, including customer support, technical support, webstore support, and accounting. As always, you can contact us online, by phone, or by email.

Currently, it is becoming more common for deliveries to be delayed by FedEx, UPS, and LTL freight carriers because of the significant increase this year in online business as well as Covid-related limitations in operations. Because of potential delays in transit, we encourage you to follow carrier tracking to see the latest delivery status.

While AutomationDirect is not able to fill out individual surveys or respond to individual reporting portals due to the volume and variety of these requests, we will continue to monitor this situation and update this statement regularly until the pandemic subsides.
