

We put the PRO in

# PRODUCTIVITY

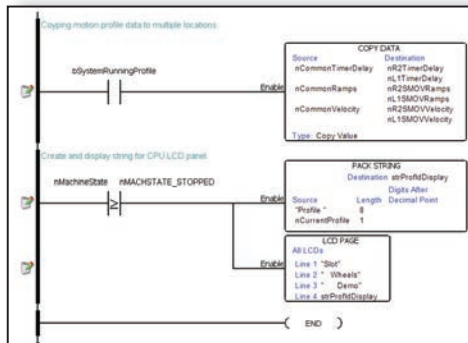

Productivity3000 programmable controller

## What used to take hours, now takes minutes

Our customers say so -

*"Six of these in service for three years now ... no issues at all. Easy to setup and program. All tags and comments in one file, online updates are EASY, easy for maintenance personnel to go online and troubleshoot, great with C-More [touch panels], reasonably priced, what else can you ask for?" - Dave in York, PA*

The Productivity3000 programmable controller series' FREE Productivity Suite programming software gives you advanced tools to make your job easier:

- Task Manager helps you organize program code and execute it for maximum speed and efficiency. Create functional tasks, name them and schedule their frequency - every scan, every second, when called, and even disable when needed.
- All program comments and device tag names are in one file, on board the CPU. So no matter which computer you use to connect to the controller, you can see all the documentation.

And when new features are added to the software or firmware, just download the latest updates from our Web site - for free! No maintenance contracts or upgrade charges.
