

# Stay Safe

with dependable, cost-effective safety switches

## Magnetic Safety Switches

Starting at \$71.00

Non-contact safety switches are interlocking devices designed to protect both people and machines by breaking the control circuit once the switch has opened.

- Variety of styles, with plastic or stainless steel housings
- Light, medium and heavy-duty models
- High tolerance for misalignment
- Models for CIP/SIP cleaning, food splash zones, and no-food-trap housings

## Coded Magnetic Safety Switches

Starting at \$71.00

Coded non-contact safety switches use coded magnets to close the circuits, offering moderate tamper protection.

- Coded magnetic actuation
- LED status indicators
- Variety of styles, with plastic or stainless steel housings
- High tolerance for misalignment
- Models for CIP/SIP cleaning, food splash zones, and no-food-trap housings

## RFID Coded Safety Switches

Starting at \$104.00

RFID coded non-contact safety switches use RFID communication between the switch and actuator to provide the most tamper-proof protection using either master or unique coded actuators.

- RFID coded actuation
- Choose master coded or unique (no two alike)
- LED status indicators
- IP69K rated
- Compatible with most safety relays

## Magnetic Locking RFID Safety Switches

Starting at \$273.00

The MGL Series of safety switches combines magnetic locking and radio-frequency identification (RFID) technology to provide non-contact operation and high anti-tamper coding. In addition, an electromagnet is used to lock machine guards.

- Heavy-duty or medium-duty holding force models available
- Master coded or uniquely coded actuation
- RFID provides a high degree of anti-tamper, virtually impossible to override
- Flexible actuator for a high degree of misalignment tolerance
