

# more powerful programming

[www.productivity3000.com/boosters](http://www.productivity3000.com/boosters)

- Speed and power
- Flexible design
- Integrated I/O
- Communications
- **Powerful programming**
- Advanced instructions
- HELP when you need it
- Extreme HMI
- Helpful diagnostics
- Data exchange

## Intuitive tools that think like you do!

Use the technology built into the Productivity3000 programmable automation controller to make your job easier.

- **50Mb memory in the CPU gives you plenty of room for the program, tag name database and all the documentation.**
- **Task Manager helps you organize program code and execute it for maximum speed and efficiency. Create functional tasks, name them and schedule their frequency - every scan, every second, when called, and even disable when needed.**
- **The tag name database means no more ambiguous memory and I/O references - add descriptive names as you program or enter all the tags before you write one line of code. Then import into your C-more HMI database with a few keystrokes.**
- **The FREE Productivity Suite programming software supports tons of time-saving instructions. Their "fill-in-the-blank" style makes it easy to configure even the more complex tasks that previously required a whole bunch of program code. Perform scaling, calculator-style math, PID, statistics, integrated data exchange, even send email!**
