

# DL205 CPU-Slot Slave Controllers

## Overview

There are currently four slave “base controllers” or “slave I/O controllers” available for the DL205 hardware.

This allows you to use industry proven DL205 I/O for general purpose distributed applications.

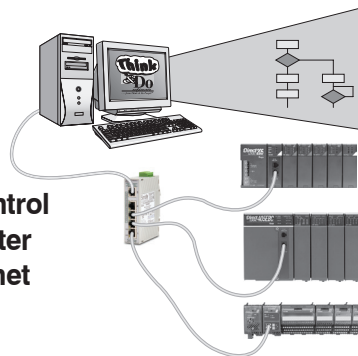

The controller modules are plugged into the CPU slot of any size DL205 base. The slave controllers must be connected to a network master controller module or to a PC running PC-based control, HMI or SCADA software.

## H2-EBC100

### Ethernet Base Controller Module

PC-based control software master or PLC Ethernet remote I/O

### Ethernet Slaves
