## Overview

The DURAPulse GS30 high performance flux-vector drives provide advanced drive functionality—all in a compact unit that has been reduced 40% in size compared to its predecessor.

These new drives include the same standard features as our GS family of drives: dynamic braking, built-in PID control, removable keypad, and RS-485 Modbus communication.

The GS30 drive expands the DURApulse family by adding internal tension control loop expanded parameter sets for greater versatility. Optional EtherCAT® and single- or dual-port EtherNet/IP communication cards. Support for up to four (4) independent IM motor parameter sets or control of a single AC PM motor.

DURApulse GS30 AC drives offer several control modes for induction or permanent magnet AC motors. Standard V/Hz and sensorless vector (SVC) modes provide quick setup and control. Field Oriented Vector control (FOC) provides high precision open loop control. For full closed loop vector control, FOC PG provides 1:1000 precision. Torque control mode, with open or closed loop control, is also available.

DURAPULSE GS30 offers two analog inputs, one analog output, seven digital inputs (including one pulse train input up to 33kHz), two digital outputs, one SPDT relay output, and two STO inputs. All of the analog and digital I/O can be configured for a wide variety of input or output functions. Two option card slots are available on all models so you can add additional I/O AND a communication card or backup power supply. This provides greater flexibility to equip the new GS30 to your specific needs.

## Features

- Broad offering from 1/2 to 100 hp
- Single-phase 230VAC up to 3HP
- Three-phase 230VAC up to 50hp and 460VAC up to 100hp
- Dual rating design – CT/VT Ratings
- “Zero Stack” side-by-side zero gap installation
- Compact Design
- Advanced LCD keypad with parameter descriptions
- Spring clamp terminal blocks
- Quick setting wheel dial for quick speed changes and parameter scrolling
- Flexible carrier frequency to 15kHz and output frequency to 599.0 Hz
- STO – Safe Torque Off (TÜV Certified)
- Built-in PLC to support up to 5K steps
- Built-in USB port for fast & easy programming
- Free downloadable software for drive configuration and PLC programming
- Field-upgradable firmware (drive & communication option cards)
- Local/Remote control mode selection or digital/comm input with Hand/Off/Auto control
- Display custom values/units on keypad
- Momentary power loss restarts
- 100kA Short Circuit Current Rating (Frames A-F)
- DC Bus Connection Terminals
- Analog I/O – configurable 2 Inputs and 1 Output
- Multi-Motor Control (4 total)
- Built-in Dynamic Braking (up to 30hp@230VAC, 40hp@460VAC) – optional resistors
- PID Controller – including sleep and wake
- Password protection
- RTD and/or PTC input motor protection
- Modularized design eases maintenance and expansion, including quick replacement of cooling fan
- High speed communication interfaces with MODBUS RTU built in, plus optional cards with additional interface types
- Circuit boards have conformal coating for improved environmental tolerance
- Excellent heat-sink design; able to operate at 50°C ambient temperature
- Fire Mode – Run fire mode during emergencies to have uninterrupted smoke

removal and system pressure

- Two-year warranty
- CE, TÜV, UL, cUL approvals

## Option Cards

- Ethernet communication interface – single or dual port cards supports both EtherNet/IP and ModbusTCP
- EtherCAT communication interface
- Encoder interface – open collector or line driver
- Extension I/O – discrete, relay, and analog
- Backup I/O power supply

## Accessories

- AC line reactors
- dV/dT output filters
- EMI filters
- RF filter
- Braking resistors
- Fuses
- NEMA 1 Conduit boxes
- DIN rail mounting kits for drives up to 5hp
- Replacement cooling fans
- Replacement keypad
- Optional advanced LCD keypad (and remote-mount bezel kit)
- GSoft2 drive configuration software
- GSLogic PLC programming software
- Type A to B USB cable
- Detailed descriptions and specifications for GS30 accessories are available in the “GS/ DURApulse Accessories” section.

## Typical Applications

- Conveyors
- Compressors
- Material handling
- Extruding
- Grinding
- Shop tools
- Fans
- Pumps
- HVAC
- Mixing
- Unwinding
- Rewinding

## Selecting the Proper Drive Rating

Selecting the Proper Drive Rating																
<b>Determine Motor Voltage and Full-Load Amperage (FLA)</b>																
Motor voltage and FLA are located on the nameplate of the motor. <b>NOTE: FLA of motors that have been rewound may be higher than stated.</b>																
<b>Determine Motor Overload Requirements</b>																
Many applications experience temporary overload conditions due to starting requirements or impact loading. Most AC drives are designed to operate at 150% overload for 60 seconds. If the application requires an overload greater than 150% or longer than 60 seconds, the AC drive must be oversized. <b>NOTE: Applications that require replacement of existing motor starters with AC drives may require up to 600% overload.</b>																
<b>Determine Application Type: Constant Torque or Variable Torque</b>																
This torque requirement has a direct effect on which drive to select. Variable Torque applications are generally easier to start; typically fans and pumps. Most other applications outside fans and pumps fall into the Constant Torque category (machine control, conveyors, etc.). If you are unsure of the application, assume Constant Torque. The specification, derating, and selection tables are generally segregated by Constant Torque and Variable Torque.																
<b>Installation Altitude</b>																
AC drives rely on air flow for cooling. As altitude increases, air becomes less dense. This decrease in air density derates the cooling properties of ambient air. Therefore, the AC drive must be oversized to compensate for the decrease in cooling. GS30 drives are designed to operate at 100% capacity at altitudes up to 1000 meters. <b>NOTE: For use above 1000m, the AC drive must be derated as described below.</b>

If installation at an altitude higher than 2000m is required, please contact AutomationDirect.</li></ul>

## Selecting the Proper Drive Rating, *continued*

### Determine Maximum Enclosure Internal Temperature

AC drives generate a significant amount of heat and can cause the internal temperature of an enclosure to exceed the rating of the GS30 drive, even when the ambient temperature is less than 104°F (40°C). Enclosure ventilation and/or cooling may be required to reduce maximum internal temperature to 104°F (40°C) or less. Ambient temperature measurements/calculations should be made for the maximum expected temperature.

**NOTE:** For use above 104°F (40°C), the AC drive must be derated as described below.

### Derate Output Current Based on Temperature Above 104°F (40°C) or 122°F (50°C)

Drive Derating by Temperature and Protection Level	
Protection Level	Derating
UL Open Type / IP20*	When the GS30 drive is operating at rated current, the ambient temperature has to be between -20°C and +50°C. When ambient temperature exceeds 50°C, decrease the rated current by 2.5% for every 1°C temperature increase. Maximum allowable temperature is 60°C.
UL Type 1 / NEMA 1 / IP40*	When the GS30 drive is operating at rated current, the ambient temperature has to be between -20°C and +40°C. When ambient temperature exceeds 40°C, decrease the rated current by 2.5% for every 1°C temperature increase. Maximum allowable temperature is 50°C.

### Derate Output Current Based on Carrier Frequency (if necessary)

#### Carrier Frequency Effects

AC Drives rectify the incoming 50 or 60Hz line power resulting in DC power at 0Hz. The resulting DC power is then pulse-width modulated and supplied to the motor by the drive's power electronics. IGBTs invert the DC power, simulating a sine wave at the desired frequency (that's what allows variable speed in AC induction motors). The speed at which the IGBTs are turned ON and OFF is called Carrier Frequency. In GS30 drives, the Carrier Frequency can range from 2kHz to 15kHz. Though Carrier Frequency can be adjusted, there are trade-offs between high Carrier Frequencies and low Carrier Frequencies.

#### Benefits of Higher Carrier Frequencies:

- Better efficiency (lower harmonic losses) in the motor
- Lower audible noise

#### Benefits of Lower Carrier Frequencies:

- Better efficiency in the drive
- Lower EMI (electrical noise)
- Reduced reflective wave peak voltage

As a general rule, the Carrier Frequency should be set as low as possible without creating unacceptable audible noise in the motor. Smaller systems can have higher Carrier Frequencies, but larger drives (>20 or 30hp) should not have Carrier Frequencies set higher than 6kHz. Heavy duty applications typically run around 2–4 kHz.

#### Derating Tables

The tables below show the derating curves for 230V GS30 drives running in two different modes under variable torque and constant torque conditions.

Line 1: Ta = 50°C / Load = 100%

Line 2: Ta = 50°C / Load = 75% or Ta = 40°C / Load = 100%

Line 3: Ta = 50°C / Load = 50% or Ta = 35°C / Load = 100%

- Published flow rates are the result of active cooling using factory installed fans.
- Flow rates of (0.0) are the result of passive cooling in drives without fans.
- The required airflow shown in the chart is for installing a single GS30 drive in a confined space.
- When installing multiple GS30 drives, the required air volume would be the required air volume for a single drive multiplied by the number of drives.

- When calculating power dissipation (Watt Loss), use the Total value. Heat dissipation shown in the chart is for installing a single GS30 drive in a confined space.
- When installing multiple drives, the volume of heat/power dissipation should be the heat/power dissipated by a single drive multiplied by the number of drives.
- Heat dissipation for each model is calculated by rated voltage, current and default carrier frequency.

## Control Circuit Terminal Names and Definitions

Control Circuit Terminals		
Terminal Symbol	Terminal Function	Description
<b>+24V</b>	Digital control signal common (Source)	+24V $\pm$ 10% 100mA <b>Note:</b> When used in parallel, if the +24V terminal is used with a feedback sensor, unequal current may occur, and there will be a risk of failure.
<b>FWD (DI1) REV (DI2) DI3 - DI7</b>	Digital input 1-7  ① Sink Mode with internal power (+24 V <sub>DC</sub> )    See pg. <?> for sinking/sourcing wiring examples.	<b>Source Mode:</b> ON: activation current 3.3 mA $\geq$ 11VDC OFF: cut-off voltage $\leq$ 5VDC <b>Sink Mode:</b> ON: activation current 3.3 mA $\leq$ 13VDC OFF: cut-off voltage $\geq$ 19VDC  DI7: Single pulse input, maximum input frequency=33kHz.  Digital inputs can be configured by the user for many different functions. Refer to P02.01-02.07 to program the digital inputs FWD (DI1), REV (DI2), DI3-DI7. When P02.00=0, FWD (DI1) and REV (DI2) can be programmed. • When P02.00 $\neq$ 0, the functions of FWD (DI1) and REV (DI2) act according to P02.00 setting. • When P02.07=0, DI7 is pulse input terminal. • DI7 uses pulse input can be used as frequency command source or connect it to the encoder for motor closed-loop control. • DI7 motor closed-loop control only supports VFBG control mode.
<b>DO</b>	Digital frequency signal output  	DO uses pulse voltage as an output monitoring signal; Duty-cycle: 50% Min. load impedance RL: 1k $\Omega$ / 100pF Max. current endurance: 30 mA Max. voltage: 30VDC $\pm$ 1% (when 30VDC / 30mA / RL=100pF) Max. output frequency: 33kHz Current-limiting resistor R: $\geq$ 1K $\Omega$ Output load impedance RL Capacitive load $\leq$ 100pF
<b>DCM</b>	Digital control / Frequency signal common (Sink)	Resistive load $\geq$ 1k $\Omega$ , resistance determines the output voltage value. DO-DCM voltage = external voltage * ( RL / (RL+R) )
<b>DO1</b>	Digital Output 1 (photo coupler)	
<b>DO2</b>	Digital Output 2 (photo coupler)	
<b>DOC</b>	Digital Output Common (photo coupler)	
<b>R10</b>	Relay Output 1 (N.O.)	<b>Resistive Load</b> • 3.0 A (NO), 3.0 A (NC) @250VAC • 5.0 A (NO), 3.0 A (NC) @30VDC <b>Inductive Load (COS 0.4)</b> • 1.2 A (NO), 1.2 A (NC) @250VAC • 2.0 A (NO), 1.2 A (NC) @30VDC To output different kinds of monitoring signals such as motor drive in operation, frequency reached, and overload indication.
<b>R1C</b>	Relay Output 1 (N.C.)	
<b>R1</b>	Relay Output 1 Common	
<b>+10V</b>	Potentiometer power supply	Power supply for analog frequency setting: +10.5 $\pm$ 0.5 VDC / 20mA

## System Wiring Diagram:

**Note:** Users **MUST** connect wiring according to the circuit diagram shown below. (Refer to user GS30 User Manual for additional specific wiring information.)

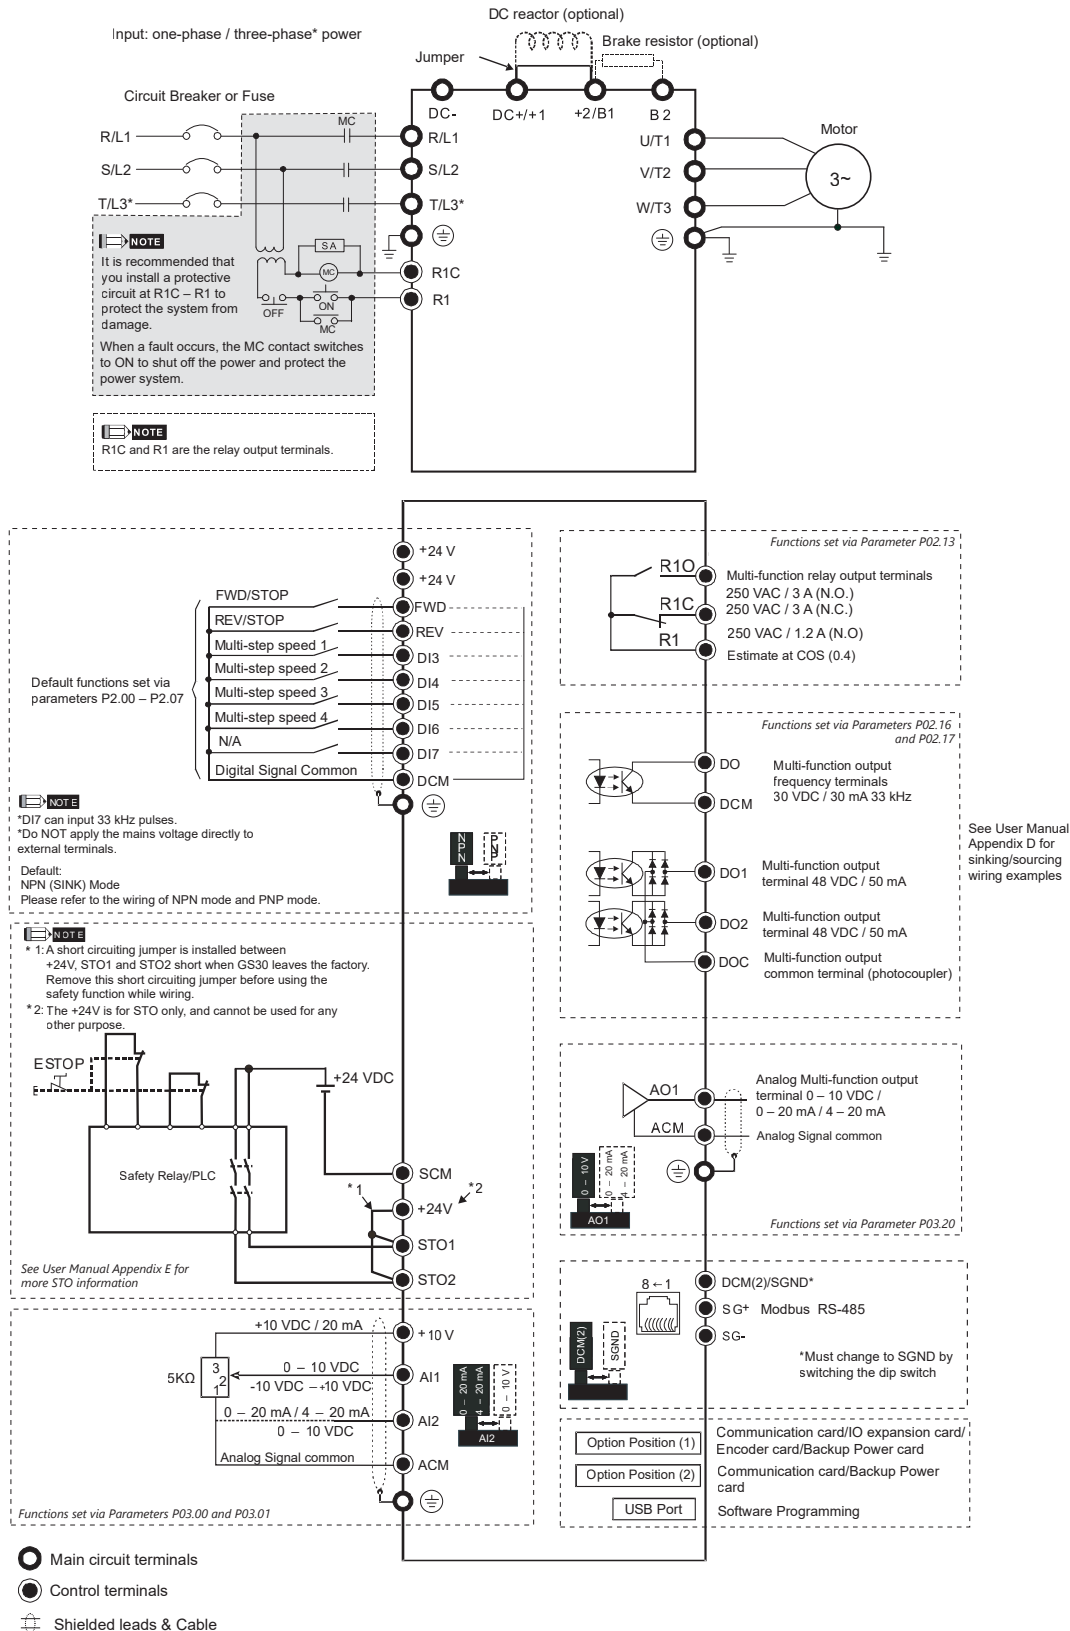

System Wiring Components	
Component	Function
Power input terminal	Supply power according to the rated power specifications indicated in the manual.
NFB or fuse	There may be a large inrush current during power on. Select a suitable NFB (Non Fuse Breaker or Circuit Breaker) or Fuse.
Electromagnetic contactor	Switching the power ON/OFF on the primary side of the electromagnetic contactor can turn the drive ON/OFF, but frequent switching can cause drive failure. Do not switch ON/OFF more than once an hour. Do not use the electromagnetic contactor as the power switch for the drive; doing so shortens the life of the drive.
AC reactor (input terminal)	When the main power supply capacity is greater than 500 kVA, or when it switches into a phase capacitor, the instantaneous peak voltage and current generated may destroy the internal circuit of the drive. It is recommended that you install an input side AC reactor in the drive. This also improves the power factor and reduces power harmonics. The wiring distance should be within 10 meters of the drive.
Zero-phase reactor	Used to reduce radiated interference, especially in environments with audio devices, and reduce input and output side interference. The effective range is AM band to 10 MHz.
EMC filter	Can be used to reduce electromagnetic interference.
Brake module and Brake resistor (BR)	Used to shorten the deceleration time of the motor.
AC Reactor/Output Filter (output terminal)	The motor cable length affects the size of the reflected wave on the motor end. For motor distances greater than 100 feet, the VTF series dV/dT filter is recommended.

# GS30 Optional Accessories – Expansion Cards

## GS30 Optional Modules

The [GS30A-CM-EIP1](#) and [GS30A-CM-EIP2](#) are communication modules that can be used for either Modbus TCP or EtherNet/IP communication. The [GS30A-CM-ECAT](#) module is used for EtherCAT communications. The [GS30A-BPS](#) is a backup power supply option card that can maintain basic drive (not motor) functionality when external power is unavailable. Note that only one communication module can be installed at a time, but the BPS card can be installed with a communication card or any of the I/O cards. Please see the GS30 User Manual for additional information and installation instructions.

# GS20/GS30 Optional Accessories – Expansion Cards

## GS20/GS30 Optional Modules

The GS30A-CM-EIPKIP2 allows mounting of GS20 and GS30 series communication and expansion cards in Position 2 (on the outside of the drive) for Frames A - D. This gives the benefit of quick removal of the communication card for access to the main power and control terminals. It does add overall depth to the drive unit. The front cover of the kit must be removed to see the comm card status LEDs.

# GS30 Series Optional Accessories – Conduit Boxes

## GS30 Conduit Boxes

Optional Conduit Box Kits can be ordered separately. These kits bolt onto the bottom of the applicable GS30 drive to provide a convenient connection point for conduit entry, allowing the GS30 to achieve a NEMA 1/UL type 1 environmental protection rating; especially useful for GS30 drives mounted outside of an electrical control panel.

# GS30 Optional Accessories – EMC Filter & Zero-Phase Reactor

## GS30 Standard Footprint EMC Filter and Zero-Phase Reactor

If electromagnetic noise is harmful to your manufacturing environment, we recommend that you select an EMC filter as shown below. For some drive models, you may need to use zero-phase reactors to be compliant with EMC regulations. Refer to the table and figures below for the recommended model, setting method, and maximum motor cable length of the EMC filter and zero-phase reactor. The filter's footprint allows mounting of the drive on top of the recommended filter, saving panel space and wiring. For more information and installation instructions, please see the GS30 User Manual.

# GS30 Series Optional Accessories – Fuses/Circuit Breakers

## GS30 Fuses/Circuit Breakers

Protection devices are essential to prevent damage to your GS30 series drive and application equipment. Please use the fuse specification chart below to select fuses that are applicable to your drive. Only use UL-certified fuses which comply with your local regulations.

\* High-speed Class J.  
 Note: JHL fuses can be used with GS and DURAPULSE drives in non-UL applications. Fuse the drive according to NEC guidelines (NEC Article 430). For UL applications, GS, and DURAPULSE drives require Class T fuses (refer to the drive's user manual for details).

## EMC Shield Plate

EMC Shield Plates are available for use with shielded cable and your GS10/GS20/GS30 drive. For GS20X drives, please use Earthing Plates. Each shield plate is compatible with all GS10, GS20, and GS30 drives of that frame size. For more information and installation instructions, see your GSxx series User Manual.

## Capacitive Filter

The GS20A-CAPF capacitive filter supports basic filtering and noise interference reduction for all GS10, GS20(X), and GS30 models, 460V and below. For more information and installation instructions, please see your GSxx series User Manual.

The GS20A-CAPF cannot be used with 575V models.

# GS30 Series Optional Accessories – Line Reactors/ VTF Filters

## GS30 Line Reactors/Voltage Time Filters

Installing an AC Line Reactor on the input side of an AC motor drive can increase line impedance, improve the power factor, reduce input current, increase system capacity, and reduce interference generated from the motor drive.

Installing a load reactor or voltage time filter on the drive's output side can increase the high-frequency impedance to reduce the dV/dT and terminal voltage to protect the motor. Use output filters if the motor cable length exceeds 100ft.

# DuraPulse Optional Accessories – Mounting Kits

## Mounting Adapter Plate

The mounting adapter plate can be used to change the wiring orientation for the GS10, GS20, and GS30 series and provides flexibility for installation. This accessory changes the wiring method from the “bottom-mains input/ bottom-motor output” to the “top-mains input/bottom-motor output” for GS10/GS20/GS30. Use the table below to select the correct mounting plate for your drive. Please see your GSxx series User Manual for additional information and installation instructions.

# DuraPulse Optional Accessories – RF Filter

## RF Filter

Zero phase reactors, (aka RF noise filters) help reduce radiated noise from the inverter wiring. The wiring must go through the opening to reduce the RF component of the electrical noise. Loop the wires three times (four turns) to attain the full RF filtering effect. For larger wire sizes, place multiple zero-phase reactors (up to four) side by side for a greater filtering effect. These are effective for noise reduction on both the input and output sides of the inverter. Attenuation quality is good in a wide range from 500kHz to 10MHz.

## Wiring Method

Wind each wire four times around the core, as shown in diagram A to the right. The reactor must be put at inverter side as closely as possible.

If you are unable to wire as above due to wire size or another aspect of your application, put all wires through four cores in series without winding, as in diagram B to the right.

* GSOFT2 can be downloaded for <u>free</u> or purchased on USB from AutomationDirect.com (search for GSOFT2).			

### GSOFT2 Drive Configuration Software

GSoft2 is the configuration software for the Automation DuraPulse family of drives. It is designed to allow you to connect a personal computer to the drive, and perform a variety of functions.

GSoft2 includes an integral help file with software instructions. GSoft2 can be downloaded for free or purchased on USB from AutomationDirect.com (search for GSoft2).

### Functions

- Create new drive configurations
- Upload/download drive configurations
- Edit drive configurations
- Archive/store multiple drive configurations on your PC
- Trend drive operation parameters (not available with GS10)
- Tune the drive PID loop
- View real time key operating parameters
- Real-time trending
- Start/Stop drive and switch directions, provided drive is set up for remote operation
- View drive faults

### Computer System Requirements

GSoft2 will run on Windows PCs that meet the following requirements:

- Windows OS: **8**: 32 & 64 bit, **8.1**: 32 & 64 bit, **10**: 64 bit, 11
- Edge or Chrome (for HTML help support)
- 32 Mb of available memory
- 10 Mb hard drive space
- Available USB port
- USB to RS485 adapter needed for GS4 and GS10 models

### PLC Summary

The GS4, GS20(X), and GS30 drives include a built-in PLC. Programmed in ladder logic, the PLC provides a comprehensive set of instructions and 2,000 (GS20(X)), 5,000 (GS30), or 10,000 (GS4) steps of programming capacity. GSLogic PLC software includes a Help File which contains the detailed information needed to use the PLC.

The PLC functionality is included with every GS4, GS20(X), and GS30 drive, and can be accessed over communications by external PLCs (via serial Modbus), or by the drive itself (using built-in PLC instructions). The PLC is perfectly suited for applications where digital and analog I/O requirements are small. For applications with complex PLC programming or large I/O requirements, please consider Click, Productivity, or Do-More/BRX. All of these PLCs can be easily integrated with the GS drive family or PLC. The GS4-KPD keypad is capable of storing multiple PLC programs.

There are two methods for communicating from the PLC to the drive. The first method is to use the WPR and RPR instructions available in the PLC's library. These two instructions can read from or write to any AC drive parameter in the same physical drive. The second method is to use Modbus RTU. The PLC is a Serial Modbus slave only. A Modbus RTU master can communicate with the PLC via serial only; optional communication cards cannot address the PLC. If communication cards (EtherNet/IP or Modbus TCP) are the desired method of communication, the drive includes PLC Buffers parameters that can be used. Simply write the needed information from the PLC into the drive's PLC buffer parameters using the WPR instruction. The Modbus TCP or EtherNet/IP cards can then read the VFD parameters.

### GSLogic Introduction

GSLogic is the drive PLC programming software for the AutomationDirect GS4, GS20(X), and GS30 family of drives. It is designed to enable you to perform a variety of drive PLC programming functions. Windows editing functions like cut, copy, paste, multiple windows, etc., are supported. GSLogic also provides for register editing, settings, file reading, saving, online monitoring settings, and other convenience functions, such as:

- Upload/download drive PLC program files to the onboard PLC
- Create new drive PLC programs
- Edit drive PLC programs
- Archive/store multiple drive PLC programs on your PC or the GS4-KPD drive keypad
- Control drive PID loops (FPID instructions)
- View in real time all drive PLC registers
- Print drive PLC program files

GSLogic includes an integral help file that includes software instructions, how to use GSLogic, and how to use the GS drive PLC.

### GSLogic System Requirements

GSLogic is a Windows-based programming software environment. Please check the following requirements when choosing your PC configuration:

- Windows OS: **8**: 32 & 64 bit, **8.1**: 32 & 64 bit, **10**: 64 bit, **11**
- 300MB free hard-disk space
- USB Port required for project transfer to drive
- USB-485M serial adapter required for GS4 models

# DuraPulse Optional Accessories – Advanced LCD Keypad

## Advanced Keypad

NOTE: The keypad described below is included with the GS4 AC Drive, and is also available for purchase separately as a spare/replacement component for GS4, or an optional upgrade for GS10/GS20(X)/GS30.

## Keypad Panel-Mounting Kit

NOTE: The keypad panel-mounting kit described below is an optional accessory that is NOT included with the GS10/GS20(X)/GS30 AC drive.

GSx Series <i>DURAPULSE</i> Drives Keypad and Keypad Panel-Mounting Kit			
Part Number	Price	Description	For GS Drive
<b>GS4-KPD*</b>	\$121.00	Spare or replacement keypad for GS4 AC drives; optional advanced keypad for GS20(X) drives; includes RJ45 connector; great for maintenance or back-up programs.	GS4 – all GS10 – all GS20(X) – all GS30 – all
<b>GS4-BZL**</b>	\$34.00	Keypad Panel-Mounting Kit for remote surface mounting or embedded mounting of the AC drive removable keypad; hardware included. Use a standard Cat5e RJ45 patch cable (not included) to connect a remote-mounted keypad to the drive. Max cable length for remote-mounted keypad = 5m.	GS4 – all GS10 – all GS20(X) – all GS30 – all

\* A keypad is included with each GS4 AC Drive; additional keypads are available for spare/replacement components.  
 \*\* The keypad mounting kit is an optional accessory that is NOT included with the GS4 AC drive; for mounting the keypad remotely from the drive.  
 Note: Keypad firmware can only be upgraded when connected to a GS4 drive.

# GS30 DURAPULSE Drives Accessories – Dynamic Braking Component Selection

## Dynamic Braking Components

Use the table below to find the appropriate braking resistor and braking unit (if applicable) for your GS30 series AC drive. For more information and installation instructions, please see the GS30 User Manual. All listed resistors are available for purchase at [www.automationdirect.com](http://www.automationdirect.com).

For drive models GS33-2040, GS33-2050, GS33-4050, GS33-4060, GS33-4075, and GS33-4100, a dynamic braking unit must be used in conjunction with the braking resistor, as shown in the GS30 AC Drive Braking Component Selection table.

**GS30 braking resistor connection;**  
Refer to user **Dynamic Braking** user manual **GS-DB\_UMP** for **DURAPULSE** resistor connection information.

## Brake Wiring

Use your drive's Braking Component Selection table to determine the appropriate brake resistor model and configuration for your drive. Refer to the diagrams below for examples on how to wire each possible configuration

**Diagram A (Drive + 1 Resistor or NEMA1 Resistor):**

**Diagram B (Drive + 2 Series Resistors):**

**Diagram C (Drive + 2 Parallel Resistors):**

**Diagram D (drive + 2 Series and 2 Parallel Resistors):**

## Braking Units for DURApulse AC Drives

### Overview

Braking units are applied to absorb the motor regeneration energy when the three-phase induction motor stops by deceleration.

GS-xDBU braking units, used with GS series braking resistors, provide optimum braking performance.

Note: Braking units are available ONLY for DURApulse drives.

**WARNING: TO AVOID INJURY OR MECHANICAL DAMAGE, PLEASE REFER TO USER MANUAL GS-DB\_UMP BEFORE WIRING.**

Dynamic Braking Unit Specifications – for GS4 & GS30 <i>DURAPULSE</i> AC Drives								
Braking Unit Part Number		<i>GS-1DBU</i>	<i>GS-2DBU</i>	<i>GS-3DBU</i>	<i>GS-4DBU</i>	<i>GS-5DBU</i>	<i>GS-6DBU</i>	<i>GS-7DBU</i>
Price		\$303.00	\$303.00	\$395.00	\$484.00	\$1,644.00	\$1,710.00	\$1,949.00
Nominal Voltage (VAC)		230			460			
Max Motor Capacity (hp/[kW])		20 [15]	30 [22]	40 [30]	60 [45]	150 [110]	200 [160]	250 [185]
Output Rating	Max Discharge Current (A) @ 10% Duty Cycle*	40	60	40	60	126	190	225
	Continuous Discharge Current (A)	15	20	15	18	45	50	100
	Braking Startup Voltage (VDC)	330/345/360/ 380/400/415 ±3V			600/690/720/ 760/800/830 ±6V		618/642/667/690/ 725/750 ±6V	
	Maximum On-Time (s)	10						
Input DC Voltage (VDC)		200–400			400–800		400–750	
Min Equivalent Resistor for Each Braking Unit (Ω)		10	6.8	20	13.6	6	4	3.4
Protection	Power CHARGE Lamp/LED	Comes ON until DC bus voltage (+P – -N) drops below 50VDC				Comes ON when DC bus voltage (DC+ – DC-) rises above 300VDC. Goes OFF when DC bus voltage (DC+ – DC-) drops below 100VDC.		
	Braking ACT Lamp/LED	ON during braking						
	Fault ERR Lamp	ON if a fault has occurred				n/a		
	Overcurrent Level LED (A)	n/a				190	290	340
	Overheat LED	n/a				Comes ON > 176°F [80°C]; Goes OFF < 149°F [65°C]		
	Heat Sink Overheat Temperture	203°F [95°C]				n/a		
	Alarm Output Relay Contact	5A @ 120VAC/28VDC (RA,RB,RC)				3A @ 250VAC/28VDC (RA,RC)		
Environment	Installation Location	indoor (no corrosive gases; no metallic dust)						
	Operating Temperature	14°F to 122 °F [-10 to +50 °C]						
	Storage Temperature	-4 to +140 °F [-20 to +60 °C]						
	Humidity	less than 90% RH, non-condensing						
	Vibration	9.8 m/s <sup>2</sup> [1G] under 20Hz ; 2m/s <sup>2</sup> [0.2G] at 20–50 Hz						
Mechanical Configuration		IP50 wall-mount enclosed				IP10 wall-mount enclosed		
* 10% Duty Cycle with maximum ON (braking) time of 10 seconds								

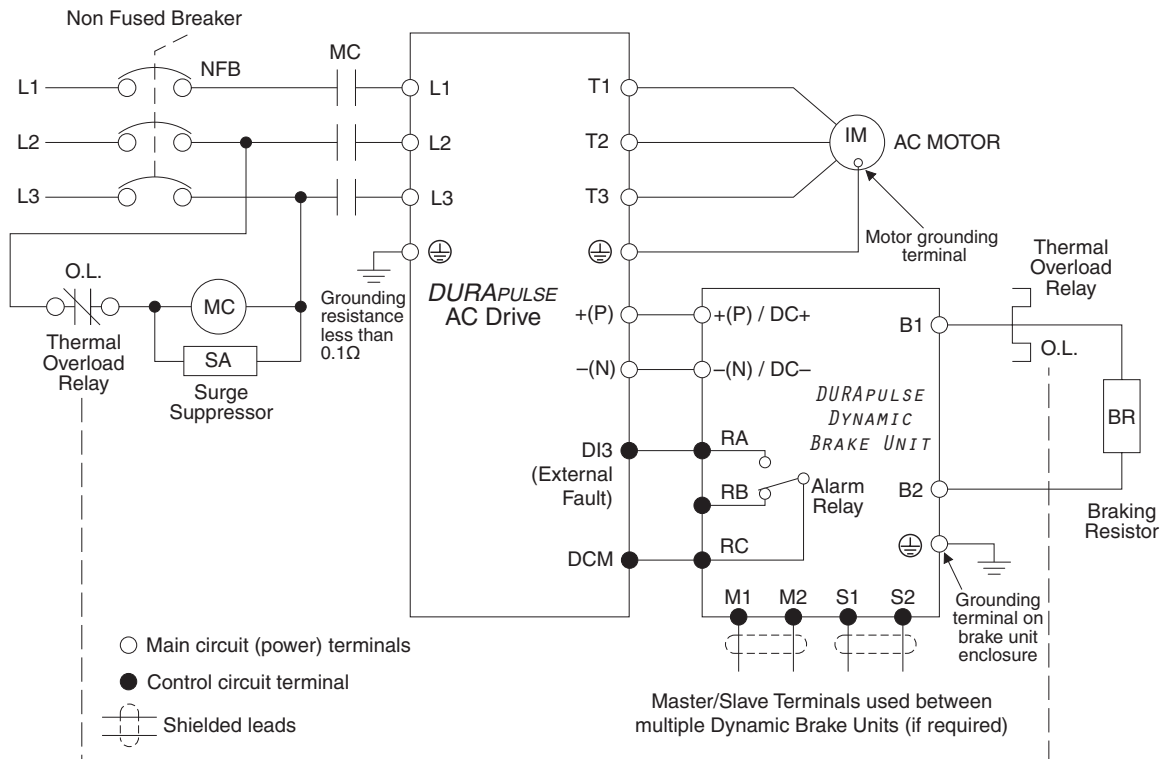

\* 10% Duty Cycle with maximum ON (braking) time of 10 seconds

## Basic Dynamic Braking Wiring Diagram for GS4 & GS30 DURAPULSE AC Drives

Note: Smaller-capacity DURApulse AC Drives can connect directly to braking resistors, and do not require Dynamic Braking Units for braking. Other applications require multiple Resistors and/or multiple Dynamic Braking Units. Refer to "Dynamic Braking Component Selection" to determine which braking components are required for your application(s), and to the DURApulse Drives Dynamic Braking User Manual for complete wiring diagrams.
