## AC Power Adapter

The AC Power Adapter provides dedicated DC power to the panel if using 110 VAC as a power source. The AC power adapter provides some features that a normal DC power supply cannot provide. The adapter incorporates power loss detection that signals the panel in the case of a

power interruption. The panel then sequentially stops all logging to USB and Compact Flash devices and shuts down before all power to the panel is lost. It also allows the panel to set an error flag that can be used to log power interruptions with a time and date stamp.
