

Dold Trapped Key System Overview

Trapped Key System

A trapped key system uses a series of mechanical locks and keys to control the access of gates or doors to running equipment or machines, ensuring safe access to those machines. Systems are set up in a predefined sequence, preventing accidental access to running equipment.

An operator must shut down machinery and lock it down, then remove the key and use the same key to unlock the door or doors that access the machinery. Keys are trapped and released in a sequential order.

- Main station has a switch module and optional solenoid actuator; Door stations have mechanical, rather than electrical, systems to provide safety for one or a series of gates.
- Allows control of a series of lock points
- Human operation of locking/unlocking provides peace of mind of firsthand, observable safety
- Cost-effective for multiple locks over a large area; eliminates cost of running electrical wiring over long distances

Note: Ordering a larger gate set than needed for the number of gates in a system compromises the safety integrity of that system. Spare keys are not available.

Dold Standard and Solenoid Trapped Key Gate Sets

Dold Trapped Key System Gate Sets provide you with a full trapped key safety system, in one- to five-gate sets. They are available in either standard (SX) or solenoid-locking (ZRH) versions. All keys and their corresponding 01 and 10 modules are unique within a set. We also offer tongue key actuators (purchased separately from the gate sets), and optional items such as door actuators, captive safety key sets, key modules for key exchange box setup, and mounting plates.

See the following section, "Selecting a Dold Trapped Key Gate Set," for more information.

Tongue Key Actuators

Our gate sets require one or more tongue key actuators:

- Standard right angle actuator (part no. ST2310-S-ACTUATOR)
- 4-spring actuator (part no. ST2311-C-ACTUATOR)
- Sliding actuator with spring (part no. ST2312-CS-ACTUATOR)

Accessories

The following optional actuator key sets can be used with any of our trapped key gate sets:

- Safety key (part no. 01-SAFETY-KEY-SET) or padlock captive door actuator key (part no. PADLOCKMODULE-SET)
- Door actuator set (part no. ACTUATOR-SET-B) for use in "door at main" situation
- Key module set for implementing a key exchange box (part no. 1001-KEYMODULE-SET)

- TÜV certificate according to the legal and standard requirements
- For safety applications up to PLe/Category 4 according to EN/ISO 13849-1
- 316L stainless steel

1001-KEYMODULE-SET

1001-KEYMODULE-SET modifies an SX-GATE-SET or a ZRH-GATE-SET to implement a key exchange box. Uniquely keyed within itself, the 1001-KEYMODULE-SET allows for expansion of a key exchange plan.

ACTUATOR-SET-B

ACTUATOR-SET-B is a gate actuator. It can be added anywhere a gate function is required, so that the SX or ZRH module can be used to protect or to lock a gate (mounting it directly on the gate).

Example: Add to an SX or ZRH unit to add a gate lock at the main key station.

(Purchase tongue key separately.)

PADLOCKMODULE-SET

PADLOCKMODULE-SET adds a personal safety feature for protection against being locked into a gate. One or more personal padlocks can be applied to the module. While a padlock is fixed to the module, the system cannot be restarted. The module can be inserted in an SX or ZRH module or for individual protection on the actual gate modules.

01-SAFETY-KEY-SET

01-SAFETY-KEY-SET adds a personal safety key as protection against being locked into any module of an SX or ZRH gate set.

This key is normally trapped; when released the operator can take it while in the machine.

Choosing a Mounting Plate

Choose a mounting plate based on the number of modules/gates in your application:

- ZRH counts as three.
- SX counts as one.
- Each actuator counts as one.

Example: A ZRH-4-GATE-SET requires four ST2361100-PLATE-2 and one ST2366100-PLATE-7.
