

DL05/06 PROFIBUS™ Slave Comm. Module

PROFIBUS Slave Communications Module

H0-PSCM Retired

Overview

You can add a DL05/06 PLC I/O sub-system to a PROFIBUS™ controller network. The H0-PSCM module allows the DL05/06 I/O sub-system to be linked with a PROFIBUS master controller. Profibus is a control bus that provides a common method to connect automation equipment with devices on a single network and significantly reduces hardwiring costs. PROFIBUS provides specifications for information exchanged between nodes, such as controller data associated with low level devices and configuration parameters that are individually related to system operations.

How it works

The H0-PSCM module is a PROFIBUS slave device which can be inserted into the option slot of a DL05 or a DL06 PLC. The H0-PSCM module is used to transfer blocks of data between a PROFIBUS master and a DL05/06 PLC. The user can choose up to four blocks of data to be transferred. The data blocks can range in size from 1 byte to 32 words and can be either input or output data. The data blocks can be mapped to real I/O within the PLC or user data areas of memory. The H0-PSCM module uses 'config' and 'parm' data, configured by the user with a program such as COM PROFIBUS, to determine what data types and addresses are to be transferred onto the PROFIBUS network. Once configured, the H0-PSCM will continually transfer the data to/from the PLC.

Specifications	
Module Location	PLC option slot
Module Type	Interface device
Maximum Expansion	126 stations, 32 stations per segment, 9 repeaters in a row
Communications	RS-485 PROFIBUS, PROFIBUS-DP. Baud rate selectable from 9.6Kbaud to 12M baud.
Module Connectors	PROFIBUS 9-pin D-shell, RJ-12 serial (firmware update only)
Internal Power Consumption	530mA maximum at 5VDC (supplied by PLC power supply)
Operating Environment	0°C to 60°C (32°F to 140°F), 5% to 95% humidity (non-condensing)
Manufacturer	Host Automation Products, LLC

CPU	Firmware Required	DirectSOFT Required
DL05	Version 4.60 or later	Version 3.0c or later
DL06	Version 1.40 or later	Version 4.0, Build 16 or later

ERNI ERbic connectors for PROFIBUS networks

ERNI ERbic connectors are available for the PROFIBUS Slave Communications Module. They are available in node and termination reversed styles for the H0-PSCM and PC connections, horizontal or vertical cable entry, and termination or daisy-chain configurations.

ERNI ERbic connectors		
Part No.	Description	Device
103658	PROFIBUS-certified reverse node horizontal connector. 9-pin Male D-Sub	H2-PBC or any PROFIBUS ISA/PCI Personal Computer Master/Slave Card
103659	PROFIBUS-certified reversed termination horizontal connector. 9-pin Male D-Sub	H2-PBC or any PROFIBUS ISA/PCI Personal Computer Master/Slave Card

Note: Dimensions are in millimeters.

Power Budgeting for the DL06

The DL06 has four option module slots. To determine whether the combination of modules you select will have sufficient power, you will need to perform a power budget calculation.

Power supplied

Power is supplied from two sources: the internal base unit power supply and, if required, an external supply (customer furnished). The D0-06xx (AC powered) PLCs supply a limited amount of 24VDC power. The 24VDC output can be used to power external devices.

For power budgeting, start by considering the power supplied by the base unit. All DL06 PLCs supply the same amount of 5VDC power. Only the AC units offer 24VDC auxiliary power.

Be aware of the trade-off between 5VDC power and 24VDC power. The amount of 5 VDC power available depends on the amount of 24VDC power being used, and the amount of 24VDC power available depends on the amount of 5VDC power consumed. Determine the amount of internally supplied power from the table to the right.

Power required by base unit

Because of the different I/O configurations available in the DL06 family, the power consumed by the base unit itself varies from model to model. Subtract the amount of power required by the base unit from the amount of power supplied by the base unit. Be sure to subtract 5VDC and 24VDC amounts.

Power required by option modules

Next, subtract the amount of power required by the option modules you are planning to use. Again, remember to subtract both 5VDC and 24VDC.

If your power budget analysis shows surplus power available, you should have a workable configuration.

DL06 Power Supplied by Base Units		
Part Number	5 VDC (mA)	24 VDC (mA)
