#### **Overview**

SR33 semi-conductor soft starters provide many advantages when used instead of electro-mechanical contactors to control

3-phase AC induction motors. The SR33 soft starters use thyristors for controlled reduced voltage motor starting and stopping, then switch to internal contacts for efficient running at rated speed.

Designed to fit in place of existing wyedelta starters.

#### **Features**

- 15.5-350A @ 208-230/460 VAC
- 24 VDC or 115 VAC I/O
- 24 VDC control power required
- Two-phase control
- Internal bypass contacts for Run
- Easily and separately adjustable motor start voltage and start and stop times
- · Suitable for a wide variety of motor loads
- · Can replace wye/delta starters
- Fault indication of 4 or 7 fault types, depending upon model: SCR or Power Supply, Overheat, Control Power Supply, Bypass Relay Failure, Shearpin, Overload, Overcurrent
- IP20 (<u>SR33-22</u> to <u>SR33-97</u>) IP00 (<u>SR33-132</u> to <u>SR33-482</u>) panel mount
- Two-year warranty

#### **Advantages**

#### Mechanical Advantages

- Smooth acceleration; reduced mechanical shock and starting stress
- Extend lifespan of mechanical drive train components
- Fluid couplings and some clutches can be eliminated

#### **Electrical Advantages**

- Reduces starting currents and spikes
- Reduces high transient currents
- More motors or larger motors can be started from lower-capacity power sources
- Allows motors to be started more frequently
- Internal mechanical contacts open and close under reduced current, increasing lifespan and reliability

#### Economic Advantages

- Lower overall costs for new installations
- Reduced maintenance and replacement of mechanical drive train components
- Reduced starting current reduces electrical power costs

### **Standards & Approvals**

- CE
- REACH
- RoHS
- UL listed\* (E333109)
- \* (soft starters <u>SR33-350</u> to <u>SR33-482</u> are not UL listed or recognized)

#### Accessories

• Heat-shrink insulation kit <u>SR33-HS1</u> (required for soft starters <u>SR33-132</u> to <u>SR33-280</u> used in UL applications)

#### **Applications**

 General purpose applications where traditional across-the-line starting or wye-delta starting would typically be appropriate.

SR33-132 to SR33-195

SR33 Series Basic Soft Starters – General Specifications and Features							
Models	All Models (SR33 -22, -29, -41, -55, -66, -80, -97, -132, -160, -195, -241, -280, -350, -430, -482)						
Rated Operational Voltage / Frequency	230–460VAC rms 3-phase (-15% +10%) / 50–60Hz +/- 2Hz; Form Designation = Form 1						
Impulse Withstand Voltage	4kV						
Insulation Voltage Rating	500V (IEC standard insulation rating. Actual testing proves insulation withstand capacity beyond 460V+10%)						
Control Power Supply General Requirements	24VDC supplied externally to terminals X1-X2; Residual Ripple: 100mV; Spikes/Switching Peaks: 240mV; Turn On/Off Response: No overshoot of V <sub>out</sub> ; Output voltage must be clamped to < 30V						
Control Input (Start/Stop)	24V DC/110V AC galvanically isolated terminals A1-A2 (1mA @ 24V DC; 3mA @ 110V AC; not suitable for use with PLC triac output)						
Control Relay Outputs	230VAC, 3A, resistive; 230VAC, 1A, AC15; Run – 13/14; Ready – 23/24						
Start Time Setting Range	0 to 30 seconds						
Start Voltage Setting Range	30 to 100 percent						
Stop Time Setting Range	0 to 30 seconds						
Start Duty	S1 per IEC 34-1 & VDE0530 Part 1. 3 x FLC for 10 seconds @ standard rating (Class 10, 40°C [104°F]).						
Starts / Hour	SR33-22 to SR33-195L: 5 starts per hour; SR33-280 to SR33-482: 3 starts per hour						
Indication	Multi function LED on front panel						
Ambient Operating Temperature	0 to 40 °C [32 to 104 °F] – Above 40°C [104 °F] derate linearly by 2% of unit FLC per °C to a max derate of 40% at 60°C [140 °F]. (Derating not UL. Refer to separate UL Ratings and Protection Requirements)						
Transportation & Storage Temperature	-25 to 60 °C [-13 to 140 °F]						
Humidity	max 85% non-condensing, not exceeding 50% at 40°C [104°F]						
Altitude	1000m [3281 ft]. Above 1000m de-rate linearly by 1% of unit FLC per 100m to a max altitude of 2000m [6562 ft].						
Pollution Degree	For use in a Pollution Degree 2 environment; No corrosive gases

#### SR33 Soft Starter Accessory

	SR33 Series Basic Soft Starters – Accessory							
Part Number	Name	Price	Description					
<u>SR33-HS1</u>	Insulation Kit	<>	Heat-shrink insulation required for soft starters <u>SR33-132</u> to <u>SR33-280</u> used in UL applications. Can also be used with <u>SR33-350</u> to SR33-482.					

#### SR33 Soft Starter Index Ratings

#### Index Rating Example - Bypassed Operation (AC-53b Utilization Category per IEC 60947-4-2)

- AC-53b = controller semiconductors provide squirrel-cage motor Start control only; bypassed for Run and Stop.
- IEC Index Ratings are comprised of Rated Operational Current ( $I_e$ ), Utilization Category, Overload Current Profile (X-Tx), OFF-time.

SR33 Index Ratings – AC-53b (Bypassed Operation) *								
Trip Class	X-Tx; OFF-time	I <sub>e</sub> (A)	Model #

#### 1-800-633-0405 Stellar<sup>®</sup> SR33 Series Basic Soft Starters SR33 Soft Starter Selection

#### SR33 Sizing Guide

The SR33 is designed for general purpose applications and where a traditional Wye/Delta is currently used (or considered appropriate). Generally the motor will start offload, and the time to accelerate to full speed will be in the range of a few seconds.

The standard SR33 range is suitable for the majority of applications, and conforms to Trip Class 10, which means it is capable of

withstanding three times Full Load Current for  $\approx$ 10-second starts. However, there are instances where a different start profile is required. To satisfy these applications, the SR33 has two other ratings; Class 20 and Class 30.

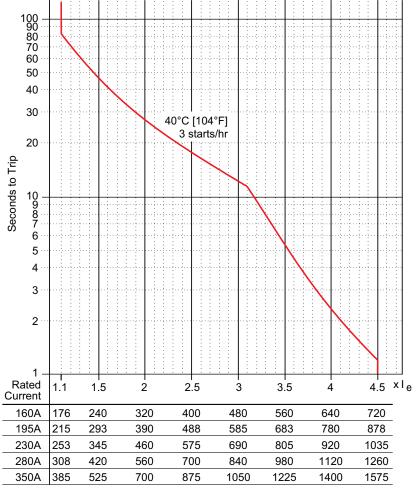

These ratings correspond to IEC thermal/electronic overload trip classes, and the SR33 must be used with an overload protection device that has a rating corresponding to the Trip Class selected.

When using the selection tables to select the most appropriate SR33 model, please note the following:

- The SR33 is not suitable for very high inertia loads, such as centrifuges or loaded crushers, with starts > 30 seconds.
- 2-pole motors may take longer to start.

recognized. ** Suitable fo	r use on a	0 to <u>SR33-482</u> are NOT U circuit capable of delive symmetrical Amperes as	ering not

more than the RMS symmetrical Amperes as indicated at 480VAC maximum, when protected by fuses or inverse-time circuit breakers with rated maximum

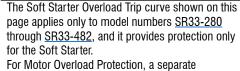

Amperes as indicated. \*\*\* Fuse comparable to Edison type JHL (class J) or ECSR (class RK5).

Trip Level Current (Amps)

The SR33 can be used at ratings other than those stated. Use the above trip curves to determine the required unit for the duty.

As an example, the <u>SR33-280</u> will run a 150hp motor (195 Amp) at the maximum continuous running current and will allow an overload of 3 x 150 Amp (450A) for 12 seconds, 3 times per hour. The unit would also allow a 3.5 x overload (525A) for approximately  $5\frac{1}{2}$  seconds, 3 times per hour.

Following an overload trip, subsequent restarts need to be restricted due to a cooling time. The severity of overload determines the cooling time, which has a maximum value of 10 minutes.

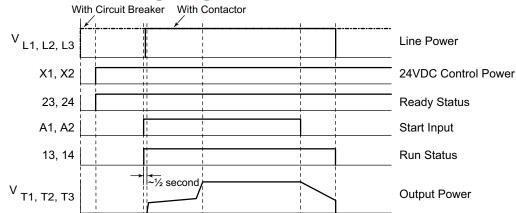

For Motor Overload Protection, a separate customer-supplied Overload Protection Device must be provided.
