# **Expansion I/O Configurations**

# **Expansion cables**

T1K-10CBL T1K-10CBL-1\* ' Right side to left side expansion cable

The T1K-10CBL(-1) connects the right side of an I/O base to the left side of the next I/O base. A maximum of two T1K-10CBL(-1) cables can be used per expansion system.

#### T1K-05CBL-LL T1K-05CBL-LL-1\* Left side to left side expansion cable

The T1K-05CBL-LL(-1) connects the left side of an I/O base to the left side of the next I/O base. Only one T1K-05CBL-LL (-1) cable can be used per expansion system and must be used with a T1K-05CBL-RR(-1) cable. This cable cannot be connected to the left side of the network interface base.

#### T1K-05CBL-RR T1K-05CBL-RR-1\* Right side to right side expansion cable

The T1K-05CBL-RR(-1) connects the right side of an I/O base to the right side of the next I/O base. A maximum of one T1K-05CBL-RR(-1) cable can be used per expansion system. Note: When this cable is used, the expansion I/O assignments are from right

\*Note: The (-1) versions of the expansion cables pass 24 VDC through on an isolated wire. (All cables pass the 5 VDC base power.) Any local expansion DC input module configured for "internal power" (current sourcing) must either have a power supply preceding it on the same base or, have a (-1) version cable pass 24 VDC from a power supply on the preceding base.

#### Using two T1K-10CBL expansion cables

In the system below, power supplies can be used anywhere.

#### Using T1K-10CBL expansion cable and T1K-05CBL-RR expansion cable

Power supplies can be used anywhere in the first two bases, but not in the last expansion base.

### Using T1K-05CBL-RR expansion cable and T1K-05CBL-LL expansion cable

Power supplies can be used anywhere in the first and third bases, but not in the second base.

# Using T1K-05CBL-RR expansion cable

Power supplies can be used anywhere in the first base, but not in the second base.

to left (reversed).
