SSW05 Soft Starters – Selection – Step 3 (of 4)

Step 3: Consider the operating environment and make the model selection based on a higher horsepower rating.

- **Height Above Sea Level**: Standard operating height is 3280ft. For every 328ft, increase motor HP by 1%, up to 13200ft. Example: For a 100HP motor at 4900ft, make model selection based on 105HP (5% higher).

- **Operating Temperature**: Standard operating temperature is 55°C (122°F).

- **Increased Starts per Hour**: See SSW07 model for more than 4 starts/hr

1) Maximum trip ratings are for non-time-delay overcurrent protection devices.
2) Motor branch circuit protection must be based on MOTOR Full Load Current and must comply with applicable local electrical codes. The 2008 NEC section 430.52 recommends a maximum of 175% (up to 225% absolute maximum) of motor FLC for time-delay fuses. (Class CC time-delay fuses are permitted up to the non-time-delay fuse maximum rating.)
