FLOWLINE™ LEVEL BEST

EchoPod/EchoTouch® Reflective Technology™ Ultrasonic Liquid Level Sensors

Overview

The innovative EchoPod/EchoTouch Reflective Technology ultrasonic liquid level sensors replace other ultrasonic level sensors in condensation applications, as well as float, conductance and pressure sensors that fail due to contact with dirty, sticky and scaling media in small, medium and large capacity tanks. Applied in chemical, water and wastewater applications, these general purpose or intrinsically safe non-contact sensors are available with single and multi-function capabilities, including continuous level measurement, switching and control. The standard 4-20 mA output is easily monitored by a PLC or other controller. Models with four relays can be configured for level alarms and/or stand-alone level control such as automatic fill or empty functions using the embedded level controller. PC configuration of all models is simple with WEBCAL™ software, while the UG06, UG12 and US06 models also offer limited configuration via their pushbuttons and integral display.

What is Reflective Technology™?

Condensation is the most commonly encountered variable in liquid level applications. Condensation attenuates the acoustic signal of ultrasonic sensors that have a flat horizontal transducer face, weakening their signal strength and signal-to-noise ratio by up to 50%, and substantially reducing their measurement reliability. At the core of Reflective Technology™ is a simple fact: unlike flat horizontal surfaces, significant water droplets cannot adhere to smooth vertical surfaces. By orienting the internal ultrasonic transducer vertically, condensation runs off the transducer face and does not affect sensor performance. The unimpeded transmit and receive signals are redirected to and from the liquid off a 45° reflector, delivering reliable level measurement. Thanks gravity!

WebCal Software

WEBCAL PC software is a utility program that enables users to easily configure their EchoSonic II, EchoTouch and EchoPod level transmitters, switches, and controllers. Download your free copy of WebCal at www.AutomationDirect.com, and connect your sensor through our Fob USB adapter (LI99-2001). Develop your configuration using pre-programmed function menus as the tank graphic and set point fields automatically change to match your configuration. Then, input your level set point values and click the Write to Unit button. Your configuration will be downloaded into the sensor and verified in less than a second. Last, click the Wiring Diagram button to open a wiring schematic of your configuration in PDF format. Print the document, disconnect the sensor and wire it per the schematic. As new software or firmware becomes available, it can be downloaded and updated through WebCal.

Overview

The EchoPod UG01 and UG03 general-purpose reflective ultrasonic multi-function level transmitters provide continuous level measurement up to 9.8' (3m) with a 4-20 mA analog signal output and four relays, and are configured via WEBCAL software. The non-contact liquid level sensor features Flowline's proprietary Reflective Technology™ that delivers reliable level measurement in condensing environments. Each output relay can be configured for alarm, automatic fill or empty functions. Select this sensor for small tanks with non-foaming and mildly vaporous media such as chemicals, water, wastewater and oil. Typical applications include day tank, IBC or drum, cooling tower, skid or machine, process tank and waste sumps.

Features

- 1.5m (4.9') and 3m (9.8') measurement ranges
- Fail-safe diagnostics with selectable relay and signal outputs
- Narrow 2" (5cm) beam width for applications with limited space
- Corrosion resistant PVDF transducer and compact PP enclosure
- Short 1.5" (3.8cm) dead band maximizes tank filling capacity
- Automatic temperature compensation from -40° to 176°F (-40° to 80°C)
- Configuration via WEBCAL software
- Four programmable relays with embedded level control logic
  - 1 pump or valve with 3 alarms
  - 2 pumps lead-lag with 2 alarms
  - 2 pumps duplexing with 2 alarms
  - 4 independent switch point alarms
- 2-year warranty

Agency Approvals

- CSA, CE

FLOWLINE™ LEVEL BEST

EchoPod® UG06 & UG12 Series Ultrasonic Liquid Level Sensors

REFLECTIVE TECHNOLOGY

Part No. UG06-0001-00 Shown

Part No. UG12-0001-00 Shown

Overview

The EchoPod UG06 and UG12 general-purpose reflective ultrasonic level transmitters provide continuous level measurement up to 39.3' (12m) with a 4-20 mA analog signal output, and is configured via WEBCAL software with limited configuration also available via the integral pushbutton display module. The non-contact liquid level sensor features Flowline's proprietary Reflective Technology™ that delivers reliable level measurement in condensing environments. Select this sensor for bulk tanks with non-foaming and mildly vaporous media such as chemicals, water, wastewater and oil. Typical applications include bulk storage, neutralization tank, clarifier and waste sumps.

Features

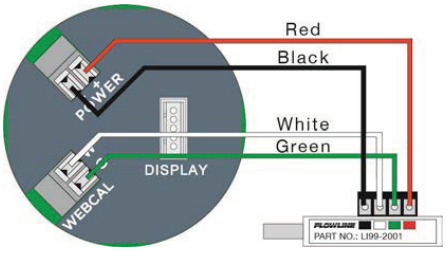
- 6m (19.6') and 12m (39.3')measurement ranges
- Reflective Technology™ measures reliably with condensation
- Corrosion resistant PVDF transducer with IP68 PP enclosure
- Fail-safe diagnostics with selectable signal fail-safe outputs
- LCD display indicates level in inches, feet, or meters
- Narrow 3" (7.6cm) (UG06) or 6" (15.2cm) (UG12) beam width for applications with limited space
- Windowed enclosure cap provides liquid tight level indication
- Configuration via WEBCAL software with limited configuration via the integral pushbutton and display
- Automatic temperature compensation from -40° to 176°F (-40° to 80°C)
- 2-year warranty

Agency Approvals

- CSA, CE

Configuration

The settings for the UG06 and UG12 are configured with free WEBCAL software (downloadable from AutomationDirect Web site), and an LI99-2001 Fob USB adapter (purchased separately).



Note: Remove the display from the housing and disconnect the cable from the connector before wiring the Fob.

** Any factor that negatively affect sound's ability to travel such as, vapor, condensation, foam, turbulence, vacuum, etc., will have a negative effect on the ultrasonic sensor signal and should be avoided. For condensing environments the Flowline UG/US series of Reflective Ultrasonic Level Sensors are recommended.*

FLOWLINE WEBCAL

WEBCAL

LI99-2001

WEBCAL Software

WEBCAL PC software is a utility program that allows users to easily configure their EchoSonic II and EchoPod level transmitters, switches, and controllers. Download your free copy of WEBCAL at www.AutomationDirect.com, and connect your sensor through our Fob USB adapter (LI99-2001). Develop your configuration using pre-programmed function menus as the tank graphic and set point fields automatically change to match your configuration. Then, input your level set point values and click the Write to Unit button. Your configuration will be downloaded into the sensor and verified in less than a second. Last, click the Wiring Diagram button to open a wiring schematic of your configuration in PDF format. Print the document, disconnect the sensor and wire it per the schematic. As new software or firmware becomes available, they can be downloaded and updated through WEBCAL.

Click on the thumbnail or go to https://www.automationdirect.com/VID-LE-0003 for a short video introduction to Flowline Ultrasonic Level Switches.

LI40-1001

PodView®

The PodView digital level indicator is a low cost general purpose level indicator that displays engineering units for level or volume and shares power with an EchoPod ultrasonic sensor, including loop powered devices. The LI40 can be field mounted for local indication as well as be used to make simple setting changes to the sensor. The display can be easily attached to any EchoPod sensor that has been configured with WEBCAL 6.0 / firmware 50.0 or higher. PodView displays sensor output and can reconfigure sensor setpoints on the fly. PodView shares power with the sensor and does not require any additional outside power supply.

Click on the thumbnail or go to https://www.automationdirect.com/VID-LE-0002 for a short video introduction to Flowline EchoTouch, EchoSpan, EchoSwitch and PodView product lines.

FLOWLINE™ LEVEL BEST

SOFTWARE CONFIGURED

EchoPod DS14 Ultrasonic Liquid Level Switch & Controller

Overview

The EchoPod DS14 ultrasonic liquid level switch provides continuous level detection up to 4.1 ft (1.25m), with 4 programmable relays for level switch or level control functions, and is configured via WEBCAL software. The embedded level controller can lower cost by replacing external control hardware. This non-contact liquid level sensor is ideally suited for corrosive, sticky or dirty liquids, and is broadly selected for small day tank, skid, intermediate bulk tanks, sump and process tank level applications.

Features

- Continuous level detection up to 4.1 ft (1.25 m)
- Configuration is fast and easy via WEBCAL software and USB adapter
- Narrow 2 inch beam width and short 2 inch dead band optimized for small tanks
- Four programmable relays for switch, pump or valve control and fail-safety
  - 1 pump or valve with 3 alarms
  - 2 pumps (lead-lag) with 2 alarms
  - 2 pumps (duplexing) with 2 alarms
  - 4 independent outputs
- PVDF transducer and NEMA Type 6P polycarbonate enclosure for corrosive liquids, UV stable for outdoor use
- Automatic temperature compensation for accurate measurement
- 2-year warranty

Agency Approvals

- cFMus

EchoPod DX10 Ultrasonic Liquid Level Transmitter

Overview

The EchoPod DX10 ultrasonic liquid level transmitter provides continuous level measurement up to 4.1 ft (1.25m), with a selectable 0-5 VDC, 0-10 VDC or 976-2000 Hz frequency signal output, and is configured via WEBCAL software. Select the voltage output for interface with analog input cards. Select the frequency output for interface with discrete input cards. This non-contact liquid level sensor is ideally suited for corrosive, sticky or dirty liquids, and is broadly selected for small day tank, skid, intermediate bulk tanks, sump and process tank level applications.

Features

- Continuous non-contact level measurement output up to 4.1 ft (1.25 m)
- Selectable voltage (analog) or frequency (discrete) signal outputs
- Configuration is fast and easy via WEBCAL software and USB adapter
- Narrow 2 inch beam width and short 2 inch dead band optimized for small tanks
- PVDF transducer and NEMA Type 6P polycarbonate enclosure for corrosive liquids, UV stable for outdoor use
- Automatic temperature compensation for accurate measurement
- 2-year warranty

Agency Approvals

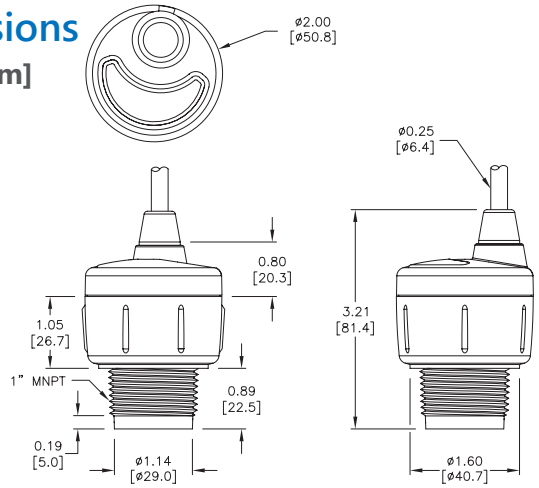
DX10-00 Technical Specifications

Price	$400.00
Range	2in to 4.1 ft (5cm to 1.25 m)
Accuracy	0.125 in (3mm)
Resolution	0.019 in (0.5 mm)
Sensing Dead Band*	2in (5cm)
Beam Width	2in (5cm)
Configuration	WEBCAL Free Software and LI99-2001 USB Fob Adapter
Memory	Non-volatile
Supply Voltage	12 to 24 VDC
Consumption	0.5 W
Signal Output	0-5V, 0-10V, 976-2000 Hz
Minimum Load	800Ω at 12 VDC; 1600Ω at 24 VDC
Output Current	Sink current, 15 mA nominal
Signal Invert	5-0V, 10-0 V, 2000-976 Hz
Signal Fail-Safe	Full, empty or hold last
Process Temperature	20° to 140°F (-7° to 60°C)
Temp. Compensation	Automatic
Ambient Temperature	-31° to 140°F (-35° to 60°C)
Pressure	30 PSI (2 bar) MAX
Enclosure Rating	NEMA Type 6P, IP67, encapsulated, corrosion resistant & submersible, UV stable
Enclosure Material	Polycarbonate
Strain Relief Material	Santoprene
Transducer Material	Polyvinylidene Flouride
Cable Jacket Material	Polyurethane
Cable Type	6-conductor, shielded
Cable Length	48in (1.2 m)
Process Mount	1 in MNPT (See accessories for installation fittings)
Mount Gasket	Viton® (included, replacement part number 204038)
Weight (lbs)	0.5
Classification	General purpose
Compliance	CE, RoHS
Agency Approvals	cFMus

** Dead band is the minimum distance the sensor must be mounted above the max liquid level.*

Dimensions

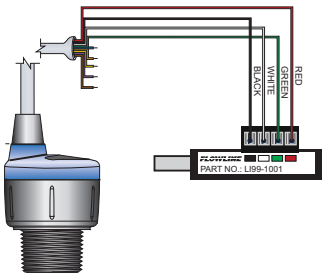
inches [mm]



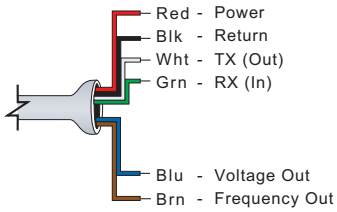
See our website www.AutomationDirect.com for complete Engineering drawings.

Configuration

The settings for the the DX10 are configured with free WEBCAL software (downloadable from AutomationDirect Web site) and an LI99-2001 Fob USB adapter (purchased separately).



Wiring



LI99-2001

When installing the 1 inch NPT level sensors care should be used to mechanically isolate the sensor housing from the tank. This can easily be done by using any of the Flowline mounting accessories which are designed to provide the isolation needed. See the end of the Ultrasonic Level Sensor Section for further details and Accessories

FLOWLINE™ LEVEL BEST

EchoPod DL10 Ultrasonic Liquid Level Transmitter

SOFTWARE CONFIGURED

Overview

The EchoPod DL10 ultrasonic liquid level transmitter provides continuous level measurement up to 4.1 ft (1.25m), with a 4-20mA signal output, and is configured via WEBCAL software. This non-contact liquid level sensor is ideally suited for corrosive, sticky or dirty liquids, and is broadly selected for small day tank, skid, intermediate bulk tanks, sump and process tank level applications.

Features

- Continuous non-contact level measurement output up to 4.1 ft (1.25 m)
- 4-20 mA output for longer signal distances, up to 1000 ft. (300m)
- Configuration is fast and easy via WEBCAL software and USB adapter
- Narrow 2 inch beam width and short 2 inch dead band optimized for small tanks
- PVDF transducer and NEMA Type 6P polycarbonate enclosure for corrosive liquids, UV stable for outdoor use
- Automatic temperature compensation for accurate measurement
- 2-year warranty

FLOWLINE™ LEVEL BEST

EchoPod DL Series Multi-Function Ultrasonic Liquid Level Sensors

Overview

The EchoPod DL series multi-function ultrasonic liquid level sensors provide continuous level measurement up to 4.1 ft (1.25m), 9.8 ft (3m), or18 ft (5.5m), with a 4-20mA signal output and 4 programmable relays for level switch or level control functions, and are configured via WEBCAL software. The embedded level controller can lower cost by replacing external control hardware. This non-contact liquid level sensor is ideally suited for corrosive, sticky or dirty liquids, and is broadly selected for small day tank, skid, intermediate bulk tanks, sump and process tank level applications.

Part No. DL14-00

Part No. DL24-00

Part No. DL34-00

Features

- Switch and control functions with continuous level measurement analog output up to 4.1 ft (1.25m), 9.8 ft (3m) or 18 ft (5.5m)
- Configuration is fast and easy via WEBCAL software and USB adapter
- Narrow beam width and short dead band optimized for small tanks
- 4-20 mA signal output and four programmable relays rated at 1A / 60VA for switch, pump or valve control and fail-safety
  - 1 pump or valve with 3 alarms
  - 2 pumps (lead-lag) with 2 alarms
  - 2 pumps (duplexing) with 2 alarms
  - 4 independent outputs
- PVDF transducer and NEMA Type 6P polycarbonate enclosure for corrosive liquids, UV stable for outdoor use
- Automatic temperature compensation for accurate measurement
- 2-year warranty

FLOWLINE™ LEVEL BEST PodView® Digital Level Indicator

Overview

The PodView digital level indicator is a low cost general purpose indicator that displays engineering units for level or volume when combined with an EchoPod DL, DS and DX series ultrasonic sensor that has been configured with WEBCAL 6.0 / firmware 50.0 or higher. The LI40 can be field mounted for local indication as well as be used to make simple setting changes to the sensor. PodView displays sensor output and can reconfigure sensor set points on the fly without needing to connect to a PC. PodView shares power with the EchoPod DL, DS and DX series sensor and does not require any additional separate power supply.

Features

- Operates with all EchoPod DL, DS and DX series level sensors compatible with WEBCAL 6.0 software / firmware 50.0 or higher
- No separate power supply required
- Use PodView to make simple adjustments to EchoPods sensor settings
- Provides level indication up to 15 feet from sensor
- Corrosion resistant NEMA 4 / IP65 enclosure
- No configuration required for the display. Simply wire the display directly to a programmed compatible EchoPod sensor
- Display can be transferred from sensor to sensor without any configuration changes to the display
- Make quick setpoint changes without the need to connect sensor back to a PC
- 2-year warranty

EchoSonic II LU Series Ultrasonic Liquid Level Transmitters

Overview

The EchoSonic II LU Series ultrasonic liquid level transmitters provide continuous level measurement up to 9.8 ft (3m), 18ft (5.5 m), 26.2 ft (8m) or 32.8 ft (10m), with a 4-20mA signal output, and are configured via WebCal software. This non-contact liquid level sensor is ideally suited for corrosive, ultrapure, sticky or dirty liquids, and is broadly selected for bulk storage, dry tank, lift station and process tank level applications.

Part No. LU27

Part No. LU23/28/29

Features

- Continuous level measurement up to 9.8 ft (3m), 18 ft (5.5m), 26.2 ft (8m) or 32.8 ft (10m)
- DSP auto adaptive filters enable plug and play operation optimizing signal output filtering and obstacle recognition
- Configuration is fast and easy via WebCal software and USB adapter
- Narrow 2 inch or 3 inch beam width for applications with limited measurement space
- Short 4 inch or 8 inch dead band maximizes the measurable filling capacity of the tank
- PVDF transducer and NEMA Type 6P polycarbonate enclosure for corrosive liquids, UV stable for outdoor use
- Automatic temperature compensation for accurate measurement
- 2-year warranty

WebCal Ultrasonic Level Sensor Software and USB Fob Adapter

Overview

WEBCAL PC software is a utility program that allows users to easily configure their EchoPod, EchoTouch and EchoSonic II level transmitters, switches, and controllers. Download your free copy of WEBCAL at www.AutomationDirect.com, and connect your sensor through the Fob USB adapter (LI99-2001). Develop your configuration using pre-programmed function menus as the tank graphic and set point fields automatically change to match your configuration. Then, input your level set point values and click the Write to Unit button. Your configuration will be downloaded into the sensor and verified in less than a second. Last, click the Wiring Diagram button to open a wiring schematic of your configuration in PDF format. Print the document, disconnect the sensor and wire it per the schematic. It's that simple.

Configuration files can be named, saved, emailed, printed, opened and used again under revision control. The advanced feature page enables you to change the measurement signal, output filtering and invert relay states from N.O. to N.C. As new software or firmware becomes available, they can be downloaded and updated through WEBCAL.

Features

- 169 configurations with pull-down menu selections
- Graphical interface lets you visualize your configuration
- Applicable level set point fields appear automatically
- Installs and tests configuration in less than a second
- Available PDF wiring diagram for each configuration
- Technical help menu with FAQs, tips and glossary
- Rapidly program sensors to the same configuration
- Save configuration files for future use or reference
- Print wiring diagrams and configuration text files
- Email configuration files to other remote users
- Please check www.automationdirect.com for the most recent system requirments.

FLOWLINE™ LEVEL BEST

EchoSpan® & EchoSwitch® Ultrasonic Liquid Level Sensors

PUSHBUTTON CONFIGURED

Overview

The, EchoSpan and EchoSwitch are innovative ultrasonic liquid level sensor families that replace float, conductance and pressure sensors that fail due to contact with dirty, sticky and scaling media in small, medium and large capacity tanks. Applied in chemical, water and wastewater applications, these general purpose non-contact sensors are available with single and multi-function capabilities including continuous level measurement, switching and control.

For input to a PLC or other controller, measurement outputs include current, voltage and frequency. Models with three relays can be configured for level alarms and/or stand-alone level control such as automatic fill or empty functions using the embedded level controller. Units are easily configured using built-in pushbuttons.

Process Temperature	-4° to 140°F (-20° to 60°C)						
Pressure	30 PSI (2 bar) MAX						

Pushbutton Configuration

With no software or PC required EchoSpan, and EchoSwitch ultrasonic level sensors are easily configured using integral pushbuttons and LCD digital display. Configuration parameters are organized in a simple menu structure so that parameter values are easily accessed and set or changed as needed. Parameters are stored in non-volatile memory so the setting values are not lost when the sensor is powered down, allowing configuration before installation in the field.

Click on the thumbnail or go to https://www.automationdirect.com/VID-LE-0002 for a short video introduction to Flowline EchoSpan, EchoSwitch and PodView product lines.

EchoSpan® LU Series Ultrasonic Level Transmitters

PUSHBUTTON CONFIGURED

Overview

The EchoSpan LU series ultrasonic level transmitters provide continuous level measurement up to 32.8 ft (10m) with a 4-20 mA signal output, and is configured via its integral pushbutton display module. This non-contact liquid level sensor is ideally suited for corrosive, ultrapure, sticky or dirty liquids, and is broadly selected for bulk storage, day tank, lift station and process tank level applications.

Part No. LU80-5101

Part No. LU81-/83/84-5101

Features

- 4 measurement ranges from 9.8 ft (3m) to 32.8 ft (10m)
- Configuration is simple via integral pushbutton display module
- LCD display indicates level in inches, centimeters and percentages
- Narrow 2 inch or 3 inch beam width for applications with limited measurement space
- Fail-safe intelligence and diagnostic feedback for simple troubleshooting
- PVDF transducer and NEMA 4X / IP65 polycarbonate enclosure for corrosive liquids
- Automatic temperature compensation for accurate measurement
- 2-year warranty

When installing the 1 inch NPT level sensors care should be used to mechanically isolate the sensor housing from the tank. This can easily be done by using any of the Flowline mounting accessories which are designed to provide the isolation needed.

Configuration

The transmitter is configured using the three buttons (UP, DOWN and SELECT) and the transmitter's LCD on the transmitters face.

More information about configuring the LU series sensors can be found at www.AutomationDirect.com

FLOWLINE™ LEVEL BEST

PUSHBUTTON CONFIGURED

EchoSwitch® LU Series Ultrasonic Level Sensors

Overview

The EchoSwitch LU series of ultrasonic level sensors are configured via the integral pushbutton display module, provides continuous level detection up to 26.2 ft (8m) with 3 programmable relays for level switch or level control functions and a 4-20 mA output. Each relay can be configured on a single setpoint (high level alarm or low level alarm) or latched on two setpoints for automatic fill or empty in simplex (one pump or valve), duplex (two pumps) or triplex (three pumps) level control modes with selectable time delay and fail-safe logic. The embedded level controller can lower cost by replacing external control hardware. These non-contact level sensors are ideally suited for corrosive, sticky or dirty liquids, and are broadly selected for pump lift station, sump and day tank level applications.

Features

- 3 level detection ranges: 9.8 ft (3m), 18.0 ft (5.5 m) and 26.2 ft (8m)
- Configuration is simple via integral pushbutton display module
- Three programmable relays for switch, pump control and fail-safety
  - 1 pump or valve with 2 alarms
  - 2 pumps (lead-lag) with 1 alarm
  - 2 pumps (duplexing) with 1 alarm
  - 3 independent outputs
- 4-20 mA output can be used to provide local or remote level detection
- LCD display indicates level height in engineering units and relay status
- Narrow 2 inch or 3 inch beam width for applications with limited measurement space
- Short 4 inch or 8 inch dead band maximizes the measureable filling capacity of the tank
- PVDF transducer and NEMA 4X / IP65 polycarbonate enclosure for corrosive liquids
- Automatic temperature compensation
- 2-year warranty

RoHS CE 2 YEAR WARRANTY

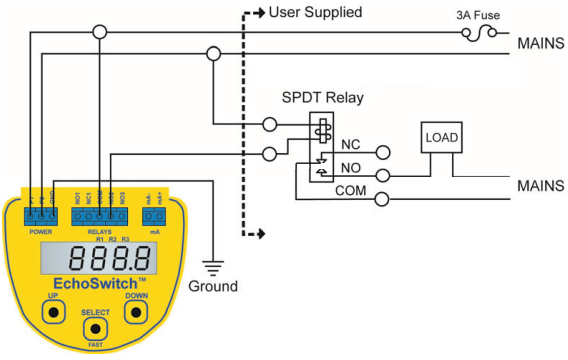
Configuration

The transmitter is configured using the three buttons (UP, DOWN and SELECT) and the transmitter's LCD on the transmitters face.

More information about configuring the LU series sensors can be found at www.AutomationDirect.com

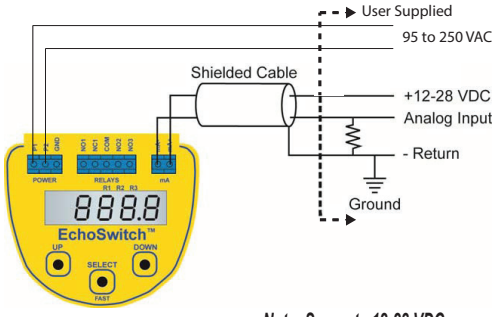
Wiring

Relay Application



Note: Isolate power to instrument from power to load (pumps, etc.) as much as possible by running power to the sensor directly from main power source. All relay commons are internally connected.

Loop Application



Note: Separate 12-28 VDC power supply is required for loop output.

FLOWLINE™ LEVEL BEST

Switch-Tek™ LU10 Ultrasonic Level Switches

Part No. LU10-1305

Part No. LU10-1405

Overview

CSA approved for hazardous environments, the intrinsically safe ultrasonic point level switch provides reliable liquid level detection of chemical, solvent, hydrocarbon and petroleum based liquids with a 1A relay output. The submersible polypropylene (PP) liquid level sensor is universally mounted through the tank wall or inside the tank as a high level alarm or low level alarm.

Features

- CSA approved intrinsically safe for use in hazardous environments
- Submersible polypropylene (PP) sensor and cable
- 60VA relay selectable NO or NC via power supply wiring polarity
- Compatible with Switch-Pak installation fittings
- Able to mount through the side wall or top wall of tank
- 2-year warranty

Switch-Tek™ LU10 Ultrasonic Level Switches

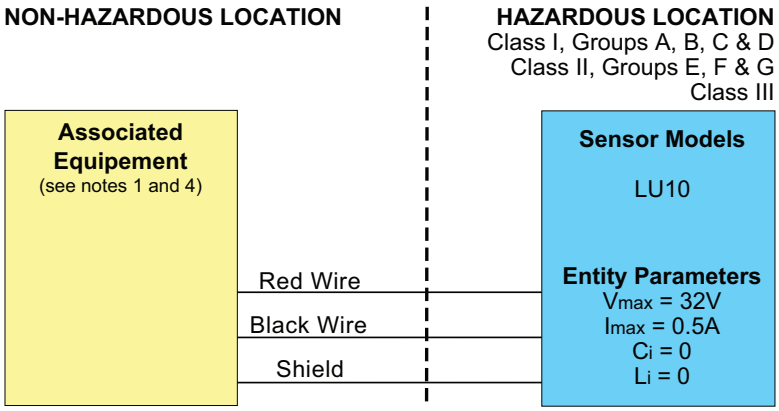
Intrinsically Safe (Haz-Loc) Wiring Information

Models LU10:

The LU10 level switch has been approved for use in Class I, Groups A, B, C & D; UNDER CERTIFICATE NUMBER LR 79326-4. The Entity parameter for the LU10 are:

Vmax = 32 VDC
Imax = 0.5 A
Ci = 0 μF
Li = 0 mH

Intrinsically Safe Control Drawing:



Notes:
1. CSA certified associated equipment with entity parameters.
2. $V_{max} \geq V_{oc}$, $I_{max} \geq I_{sc}$, $C_i + C_{cable} \leq C_a$., $L_i + L_{cable} \leq L_a$.
3. Installation should be in accordance with CEC Part I, or NFPA 70.
4. Associated equipment must be installed per manufacturers instructions

Sensor Drawing: LSD1

FLOWLINE™ LEVEL BEST

Switch-Tek™ LZ12 Vibration Fork Level Switch

Part No. LZ12-1405

Overview

The general purpose vibration point level switch provides reliable liquid level detection of dirty liquids such as those with light to medium coating, scaling or foaming characteristics with a 1A relay output. Media examples include wastewater, diluted caustic soda and light weight oil. For optimum performance, the liquid level switch automatically adjusts for coating build up and, if necessary, outputs a proactive maintenance alarm to request cleaning. The submersible Ryton® liquid level sensor is universally mounted through the tank wall or inside the tank as a high level or low level alarm.

Features

- Automatic coating adjustment optimizes sensor performance
- Submersible Ryton® sensor with polypropylene (PP) cable for corrosive liquids
- Coating alarm proactively alerts user when cleaning is required
- 60VA relay selectable NO or NC via power supply wiring polarity
- Compatible with Switch-Pak installation fittings
- Ideal for coating/scaling liquids
- Mounts through side wall or top wall of tank
- 2-year warranty

Switch-Tek LZ12 Technical Specifications

Model	LZ12-1405
Price	$370.00
Weight (lb)	0.7
Insertion Length	2.3 in [57mm]
Orientation	Universal
Accuracy	±1mm [0.04 in] in water
Repeatability	±0.5 mm [0.02 in] in water
Supply Voltage	12-30 VDC
Consumption	25mA maximum
Contact Type	(1) SPST relay
Contact Rating	60VA, 1A maximum (125VAC max)
Contact Output	Selectable NO / NC
Maint. Alarm	NPN transistor, 10mA maximum
Process Temp.	-40°F to 176°F [-40°C to 80°C]
Pressure	150psi [10bar] @ 25°C, derated @ 1.667 psi [0.113 bar] per °C above 25°C

FLOWLINE™ LEVEL BEST Switch-Tek™ LP15 Capacitance Level Switch

Part No. LP15-1405

Overview

The general purpose guard capacitance point level switch provides reliable high or low liquid level detection of water based conductive liquids with light coating, crystalizing or scaling characteristics with a 1A relay output. Media examples include copper sulfate and brine. The RF guard circuit eliminates the coating signal path between the active and reference electrodes. The submersible polypropylene (PP) liquid level sensor is universally mounted through non-metallic tank walls or inside the tank as a high level or low level alarm.

Features

- Guard circuit optimized performance in coating type media
- Submersible polypropylene (PP) sensor body and cable for corrosive liquids
- 60VA relay selectable NO or NC via power supply wiring polarity
- Compatible with Switch-Pak installation fittings
- Ideal for side wall or top mount
- Ideal for coating liquids
- Great for waste water applications
- 2-year warranty

FLOWLINE™ LEVEL BEST

Switch-Tek™ LV10 Buoyancy Level Switch

Part No. LV10-1301

Overview

The general purpose buoyancy point level switch provides reliable liquid level detection of relatively clean water and chemical solutions. Media examples include boric acid and ultrapure water. The baffle body eliminates level switch chatter caused by turbulence. The submersible polypropylene (PP) liquid level sensor is mounted vertically inside the tank as a high level or low level alarm.

Features

- Baffle body and stabilized float dampen out switch chatter
- Submersible polypropylene (PP) sensor and cable for corrosive liquids
- 15VA dry contact (reed switch) selectable NO or NC state
- Compatible with Switch-Pak installation fittings
- Ideal for water and waste applications
- Float can wire directly to PLC/SCADA or controller
- Cage helps protect from debris
- 2-year warranty

FLOWLINE™ LEVEL BEST

Switch-Pro™ Remote Level Controllers

Part No. LC40-1001

Part No. LC41-1001

Part No. LC42-1001

Overview

CSA approved, the Switch-Pro general purpose level controllers are offered in three configurations for alarms, pump and valve control. The LC40 accepts one level sensor input and provides one 10A relay for high level or low level alarm. The LC41 accepts two level sensor inputs and provides one latching 10A relay for automatic fill or empty control. The LC42 accepts three level sensor inputs with one latching 10A relay output for automatic fill or empty control, and a second non-latching 10A relay for high level or low level alarm.

Features

- Fail-safe relay control of pumps or valves with 0-60 second delay
- Easy setup with LED indicators for sensor, power and relay status
- 35mm DIN rail mount or panel mount polypropylene (PP) enclosure with removable terminal strips
- Invert switch changes relay state from NO to NC without rewiring
- Mounts easily in control panel
- Connects to any Flowline level switch
- Interfaces directly with any horn, buzzer, valve, etc...
- Use LC41, LC42 version for automatic fill/empty operations
- 2-year warranty

Switch-Pro™ Remote Level Controllers

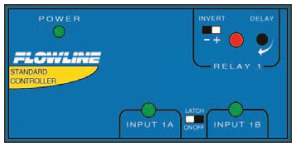
Wiring

LC40 series: 1 sensor input, 1 relay output.

Typical Application:
High level or low level alarm

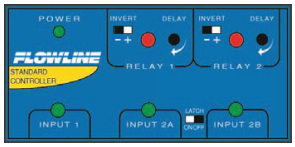
LC41 series: 2 sensor inputs, 1 relay output. The relay included is a latching relay.

Typical Application:
Automatic fill or empty

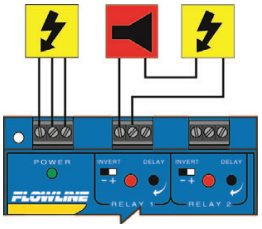


LC42 series: 3 sensor input, 2 relay outputs. One relay is latching and the other is a single input relay.

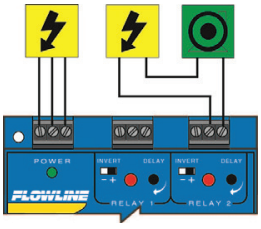
Typical Application:
Automatic fill or empty with high level or low level alarm



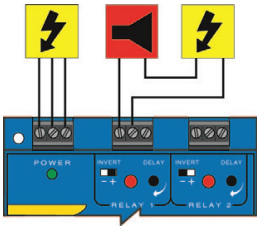
Low Level Alarm Output Wiring Example (One level sensor input required):



Automatic Fill Output Wiring Example (Two level sensor inputs required):



High Level Alarm Output Wiring Example (One level sensor input required):



Automatic Empty Output Wiring Example (Two level sensor inputs required):

FLOWLINE™ LEVEL BEST

DataPoint™ Remote Level Controller

Part No. LC52-1001

Overview

The LC52 general purpose controller provides single tank level indication with 2 relays, up to three setpoints and an isolated analog repeater. Relay 1 is configurable on a single setpoint. Relay 2 can be configured on a single setpoint or latched on two setpoints for automatic fill or empty control. The controller accepts a 4-20 mA input from any type of level transmitter. The LC52 has a polycarbonate enclosure with integral 35mm DIN rail mounting.

Features

- 3.5 digit LED display indicates level in custom engineering units
- Fail-safe relay control of pumps or valves with 0-60 second delay
- Easy set up with pushbutton calibration for span, display and relay set points
- 35mm DIN rail or panel mount polypropylene (PP) enclosure with removable terminal strips
- Invert switch changes relay state from NO to NC without rewiring
- Simple controller for operating 2 alarms or 1 auto fill/empty with alarm
- Bar graph provides instant confirmation of transmitter's operational performance
- Lock-out feature prevents inadvertent setting changes
- 2-year warranty

DataPoint LC52 Series Technical Specifications	
Model	***LC52-1001***
Price	$485.00
Weight (lb)	1.9
Supply Voltage	120VAC @ 50-60 Hz (can be configured for 240VAC) 50-60 Hz
Display Type	LED, 3.5 digit
Display Units	Engineering
Display Output	0 to 999
LED Indication	Power & relay
LED Bar Graph	Span and setpoints
Memory	Non-volatile
Security	Setpoint lock out
Configuration	Pushbutton
Alarm Indication	Amber: < 4mA; Red: > 20mA
Sensor Input	(1) 4-20 mA
Sensor Supply	24VDC @ 1.5 W
Loop Power	4-20 mA, 18VDC
Consumption	5W maximum
Contact Type	(2) SPDT relays (one non-latching, one latching)
Contact Rating	250VAC @ 10A
Contact Output	Selectable NO / NC
Contact Latch	ON / OFF
Contact Delay	0-60 seconds
Repeater Output	4-20 mA, 12-36 VDC, 1200Ω max
Ambient Temperature	-40°F to 158°F [-40°C to 70°C]
Enclosure Mounting	35mm DIN rail or direct panel mount
Enclosure Material	Polypropylene (PP), UL94VO
Classificaton	General purpose
Compliance*	N/A

ProSense® CLC Series Liquid Level Controllers

Part No. CLC1-F-24

Overview

The ProSense CLC Series Liquid Level Controllers detect and control levels of conductive liquids (tap water, seawater, sewage, chemical solutions, coffee, ice cream, etc.) in dual probe pump up or pump down applications. The conductive properties of the liquid complete a circuit between a probe and common when the liquid comes in contact with both. These relays compare the value of the measured resistance between the probe and common with the setpoint of the adjustable sensitivity potentiometer provided on the product. The output of the relay is used to control pumps, solenoids or valves to automatically lower, raise or maintain the level of the liquid in the tank. The CLC Series controller pulses the probes with a DC voltage to prevent potential electroplating issues.

Operation - Dual Probe

Pump Up (Fill) Models: When the liquid level falls below the low level probe, a 1 second time delay begins & the LED flashes Red. At the end of the time delay, the output relay energizes & the LED is Red ON. The pump is ON to fill the tank. The relay remains energized (latched) until the liquid level rises & touches the high level probe. The output relay de-energizes, turning OFF the pump, and remains de-energized & the LED is Green ON until the liquid level again falls below the low level probe.

Pump Down (Drain) Models: When the liquid level rises & touches the high level probe, a 1 second time delay begins & the LED flashes Red. At the end of the delay, the output relay energizes & the LED is Red ON. The pump is ON to drain the tank. The relay remains energized (latched) until the liquid level falls below the low level probe. The output relay de-energizes, turning OFF the pump, and remains de-energized & the LED is Green ON until the liquid level rises & touches the high level probe.

Features

- Controls level of conductive liquids in pump up (Fill) or pump down (Drain) applications
- Dual probe operation
- Probes are pulsed with a DC Voltage to prevent electroplating
- Adjustable sensitivity range to meet a large variety of liquid types
- LED status indication
- Uses industry-standard 8-pin octal socket
- Pilot duty contact rating

Approvals

- cURus, File number E191059
- UL Listed when used with socket 70169-D, File number E191059
- CE

(with socket 70169-D)

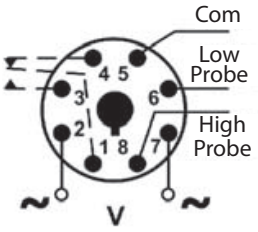
ProSense® CLC Series Liquid Level Controllers

CLC Liquid Level Controller Specifications	
Voltage Tolerance	+10/-15% of nominal at 50/60 Hz.
Load (Burden)	2VA
Probe Voltage	5V DC Pulsed
Resistance Sensitivity Range	1K - 250KΩ
Response Time	Pick-up: One second Drop-out: One second
LED Indicator	Green ON with Input Voltage applied; Red Flashing during timing; Red ON when relay energized
Temperature	Operating: -28 to 65°C (-18 to 149°F) Storage: -40 to 85°C (-40 to 185°F)
Output Contacts	SPDT: 10A @ 240V AC / 7A @ 28V DC, 1/4HP @ 120V AC (N.O.), Minimum contact rating: 12V @ 100mA
Contact Life	Mechanical: 10,000,000 operations Electrical at Full Load: 100,000 operations
Mounting	Requires Industry-Standard 8 Pin Octal Socket (70169-D to maintain UL Listing or equivalent)
Approvals	cURus, cULus (File Number E191059), CE

Wiring

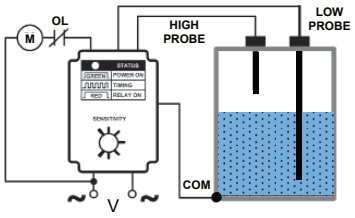
8 Pin Octal
70169-D



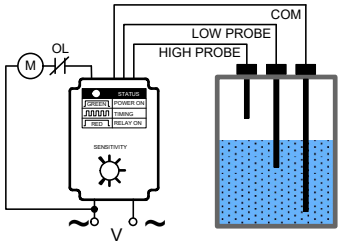
Suggested Probe Assembly

8mm diameter GWR-P240 through GWR-P1600 probes can be used with BSPBX-12-W cable gland and CLC-ACC1 wiring kit. Can be mounted through tank hole with included nut or without the included nut when installed in a 1/2" NPT tank flange.

Installation and Usage

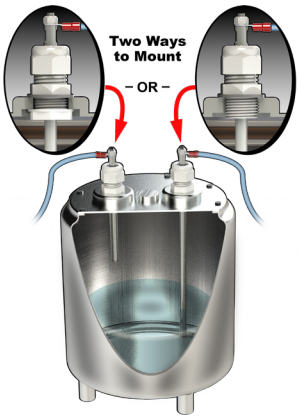


When using a metal or conductive tank the HIGH and LOW PROBE should be isolated from the tank and the COM should be tied to the tank wall that will be in contact with the process fluid.

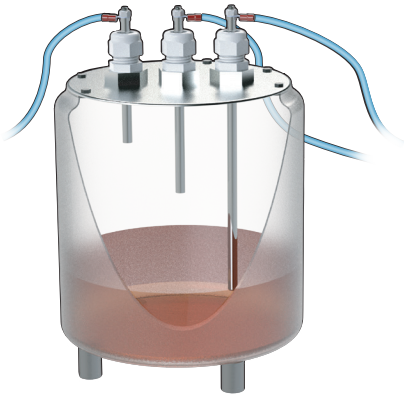


When using a plastic or non-conductive tank a third COM PROBE should be used that will always be lower in the process liquid than the LOW PROBE.

Dual Probe Installation



Dual Probe with Common Probe Installation



Note: The suggested probe configurations and suggested parts above are one application solution. Any conductive material can be used as a probe and installations do not have to be vertically installed in the tank. For applications in deep tanks threaded rod, available at most hardware stores, or an equivalent can be used.

ProSense® GWR Series Guided Wave Radar Level Sensors

Guided Wave Radar Level Measuring Principle

The GWR uses electromagnetic pulses in the nanosecond (microwave) range. The sensor head transmits the pulses and the pulses travel down the metal probe (guide). When the wave hits the medium, it is reflected back, collected by the metal probe, and guided to the sensor head. The time difference between the transmitting and receiving pulse (time-of-flight) is directly proportional to the distance measurement. To prevent signal attenuation, a coaxial tube configuration can be used for low dielectric process fluids. For applications with build up, the probe only configuration should be used to prevent false signals from bridging between the tube and probe. Probes and coaxial tubes can be cut in the field to adapt to different level applications.

Application Examples

- Detection of cleaning liquid in a parts cleaning system
- Monitoring of hydraulic oil in a hydraulic power unit (with coaxial assembly)
- Detection of cooling water in an industrial cooling system
- Detection of hot glue in corrugated cardboard manufacture

ProSense® GWR Series Guided Wave Radar Level Sensors

Part No. GWR-1600-P

Part No. GWR-1600-C

Overview

AutomationDirect's ProSense GWR series guided wave radar level sensors provide reliable, low cost liquid level measurement for industrial applications. With one switch output and a second output that can be configured as a switch or analog output signal, the GWR series can provide both continuous as well as point level measurements. The GWR-1600-P probe model is best suited for use with water or water-based media and is ideal for challenging applications with liquid that is soiled, viscous, or prone to formation of deposits. The unit has 3/4" NPT male process connection threads. The GWR-1600-C coaxial tube and probe model is optimized for use with oil or oil-based media or clean water or water-based media without particulates or deposits that might bridge the gap between the probe and coaxial tube. The unit is mounted to the process using 3/4" NPT male threads on the coaxial tube. The GWR-1600-C can also be used as a probe only unit without the coaxial tube for water or water-based applications that may be soiled, viscous, or prone to formation of deposits. When used as a probe only unit without the coaxial tube, the GWR-1600-C has G3/4 male process connection threads. A variety of probe and coaxial tube accessories are available in lengths from 240mm to 1600mm and can be cut in the field to adapt to different level applications. Using the pushbuttons and display, the GWR series can be easily set up to measure and display liquid level in millimeters, inches, or percent. The 4-digit alphanumeric display and LEDs are used during configuration and provide clear indication of the measured variable and output status during operation. The rugged 316 stainless steel housing is IP68/IP69K rated providing uncompromising protection and long life in difficult industrial environments. The GWR series is backed by a five-year warranty.

Output Function Selections

Output 1:

- Switching signal for level limit values

Output 2:

- Switching signal for level limit values
- Analog signal for continuous level measurement

Features

- Switch and analog outputs for both continuous and point level measurement
- Probe unit is best suited for use with water or water-based media and is ideal for challenging applications with liquid that is soiled, viscous, or prone to formation of deposits
- Coaxial tube and probe model is optimized for use with oil or oil-based media or clean water or water-based media without particulates or deposits that might bridge the gap between the probe and coaxial tube
- Variety of probe and coaxial tube accessories are available in lengths from 240mm to 1600mm and can be cut in the field to adapt to different level applications
- Measure and display liquid level in millimeters, inches, or percent
- 4-digit alphanumeric display and LEDs with easy pushbutton setup
- Rugged 316 stainless steel IP68/IP69K rated housing
- 4-pin M12 quick disconnect electrical connection
- 5-year warranty

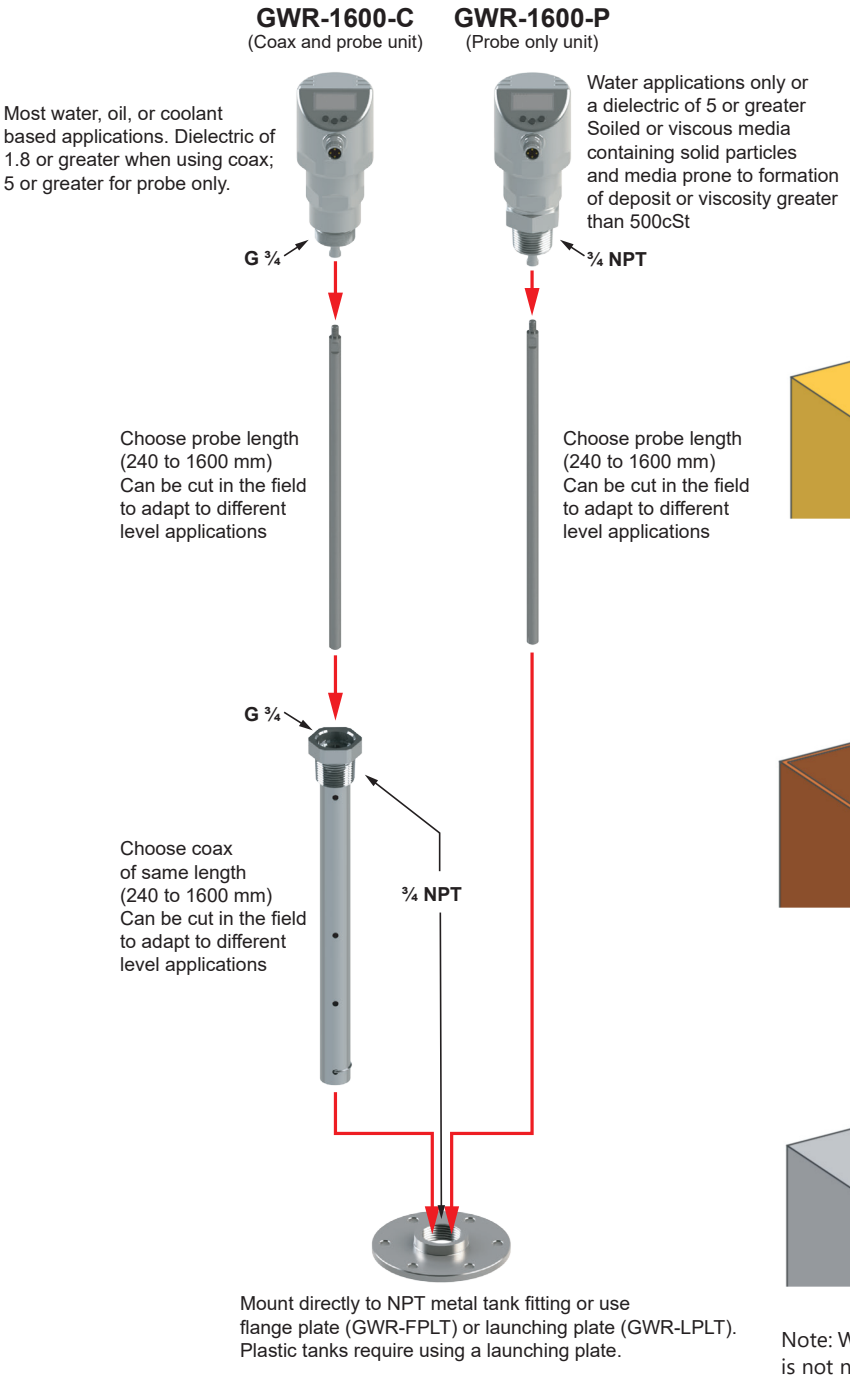
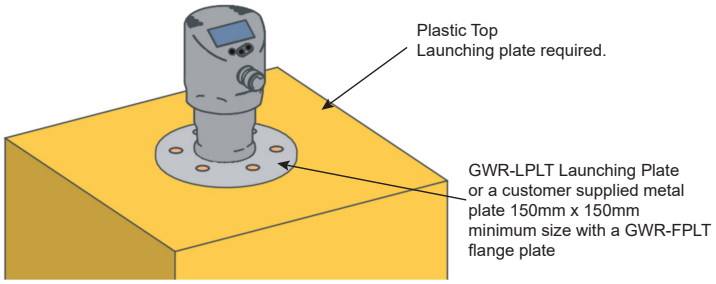
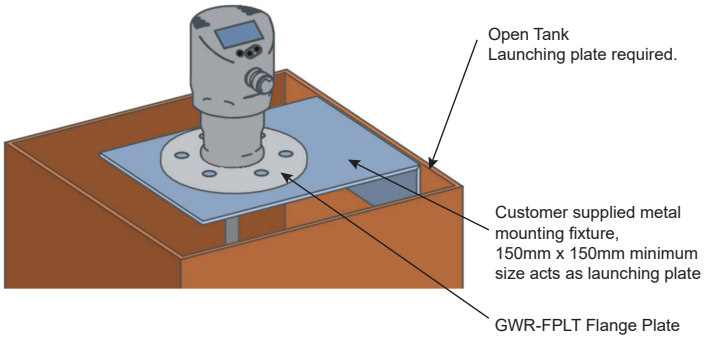
Using GWR Series Guided Wave Radar Level Sensor Accessories

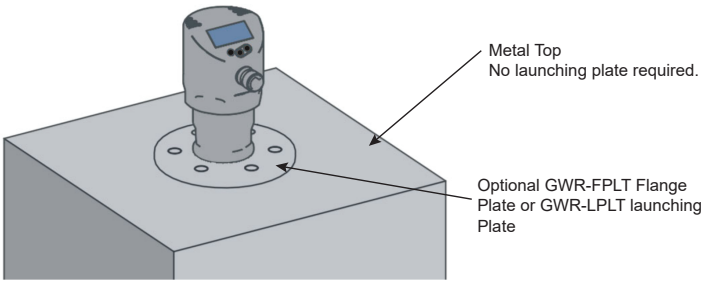


Launching Plate Requirements

For proper decoupling of the radar pulse, a metal launching plate at least 150mm square or 150mm diameter is required.







Note: When using the coaxial tube, the launching plate as described above is not necessary. This makes mounting easier. However, bridging between the probe and coaxial tube due to solids, emulsions, etc. can cause false level indication. Incorrect measurements may be caused by highly absorbing surfaces such as foam, intensely bubbling surfaces, or inhomogeneous materials such as oil and water layers. See product Operating Instructions for settings and methods to mitigate signal loss or degradation.

ProSense® VFL Series Vibration Fork Liquid Level Switches

Part No. VFL75-100L-3H

Part No. VFL50-100S-3D

ProSense Vibration Fork Liquid Level Switches

The ProSense VFL Series of Vibration Fork Level Switches is designed using tuning fork technology for reliable liquid point level detection for monitoring, alarming, and control applications. The device's electronics cause its tuning forks to vibrate at their natural frequency. When the forks come in contact with the medium, the fork vibration frequency will change and trigger the switch output to change state. Suitable for use in tanks, vessels, and pipes, the VFL series is an ideal alternative for applications where other liquid point level technologies such as float switches or conductive, optical and capacitance sensors are not suitable due to conductivity, turbulence, buildup, air bubbles, foam, pressure, temperature, and viscosity changes. The ProSense VFL Series is offered in two process connection sizes with short and extended insertion lengths, standard and high temperature constructions, and a 3-wire DC switch output for connection to controller inputs or a 2-wire AC/DC switch suitable for control of valves and pumps, making the VFL Series perfect for high and low point level alarms, overfill protection, and pump protection in a wide variety of liquid level applications.

Features

- 1/2" or 3/4" male NPT process connection
- Short or extended insertion lengths
- Standard or high temperature constructions
- 3-wire DC output for PLC inputs or 2-wire AC/DC output for control of valves and pumps
- M12 quick disconnect or DIN style electrical connectors
- Robust stainless steel construction
- LED indication provides visual function check
- External function test with test magnet

Applications

- Ideal for applications not suitable for other liquid point level technologies due to conductivity, turbulence, buildup, air bubbles, foam, pressure, temperature, and viscosity changes
- Use in tanks, vessels, and pipes for:
  - Overfill protection
  - High and low point level alarms
  - Pump control or limit detection
  - Valve control
  - Run dry or pump protection
  - High-temperature applications

ProSense® VFL Series Vibration Fork Liquid Level Switches

VFL Series Vibration Fork Liquid Level Switch Specifications	
Output	
Switch Output	Switching behavior: On/Off 3-wire DC-PNP: Positive voltage signal at the switch output of the electronics (PNP), switching capacity 200mA* 2-wire AC/DC: Load switching in the power supply line (see Wiring section for Load Requirements), switching capacity 250mA*
Operating Modes	The device has two operating modes: maximum safety (MAX) and minimum safety (MIN). By choosing the corresponding operating mode, the user ensures that the device also switches in a safety-oriented manner even in an alarm condition, e.g. if the power supply line is disconnected. Maximum safety (MAX) The device keeps the electronic switch closed as long as the liquid level is below the fork. Sample application: overfill prevention Minimum safety (MIN) The device keeps the electronic switch closed as long as the fork is immersed in liquid. Sample application: Dry running protection for pumps The electronic switch opens if the limit is reached, if a fault occurs or the power fails (quiescent current principle).
Electrical	
Supply Voltage	DC-PNP: 10 to 30 V DC, 3-wire AC/DC: 20 to 253 V AC/DC, 2-wire
Power Consumption	DC-PNP: < 975mW AC/DC: < 850mW
Current Consumption	DC-PNP: < 15mA AC/DC: < 3.8 mA
Residual Ripple	DC-PNP: 5Vss 0 to 400Hz AC/DC: N/A
Electrical Connection	Electronic version 3-wire DC-PNP with M12 plug or valve plug connection Electronic version 2-wire AC/DC with valve plug connection A fine-wire fuse is necessary for operation: 500mA slow-blow. Electronic version 3-wire DC-PNP 3-wire DC-PNP is preferably used in conjunction with programmable logic controllers (PLC) Voltage source: non-hazardous contact voltage or Class 2 circuit (North America).
Cable Specification	Valve plug: – Cable cross-section: max. 1.5 mm2 (16AWG) – Ø 3.5 to 8mm (0.14 to 0.26 in) M12 connector: IEC 60947-5-2
Overvoltage Protection	Overvoltage category II
Reverse Polarity Protection	2-wire AC/DC: AC mode: the device reverse polarity protection does not apply. DC mode: in the event of reverse polarity the maximum safety mode is always detected. Check the wiring and perform a function check before commissioning. The device is not damaged in the event of reverse polarity. 3-wire DC-PNP: Integrated. In the event of reverse polarity, the device is deactivated automatically.
Short-Circuit Protection	2-wire AC/DC: During switching the sensor checks whether a load, e.g. relay or contactor, is present (load check). If an error occurs, the sensor is not damaged. Smart monitoring: normal operation is resumed once the error is fixed. 3-wire DC-PNP: Overload protection/short-circuit protection at I > 250 mA; the sensor is not destroyed. Intelligent monitoring: Testing for overload at intervals of approx. 1.5 s; normal operation resumes once the overload/short-circuit has been rectified.
Performance	
Reference Operating Conditions	Ambient temperature: +25°C (+77°F) Process pressure: 1 bar (14.5 psi) Fluid: Water (density: approx. 1 g/cm³, viscosity 1 mm2/s) Medium temperature: 25°C (77°F) Density setting: > 0.7 g/cm³ Switching time delay: Standard (0.5 s, 1s)
Switch Point	13mm (0.51 in) ±1mm
Hysteresis	max. 3mm (0.12 in)
Non-Repeatability	±1 mm (0.04 in) in accordance with DIN 61298-2
Influence of Ambient Temperature	Negligible
Influence of Medium Temperature	–25 µm (984 µin) / °C
Influence of Medium pressure	–20 µm (787 µin) / bar
Switching Delay	0.5 s when tuning fork is covered 1.0 s when tuning fork is uncovered
Switch-On Delay	max. 3s
Measuring Frequency	approx. 1,100 Hz in air
Measured Error	In event of device change: ± 2mm (0.08 in) as per DIN 61298-2

**50°C (122°F) ambient maximum. See Operating Instructions for Derating Curve for ambient temperatures to 70°C (158°F).*

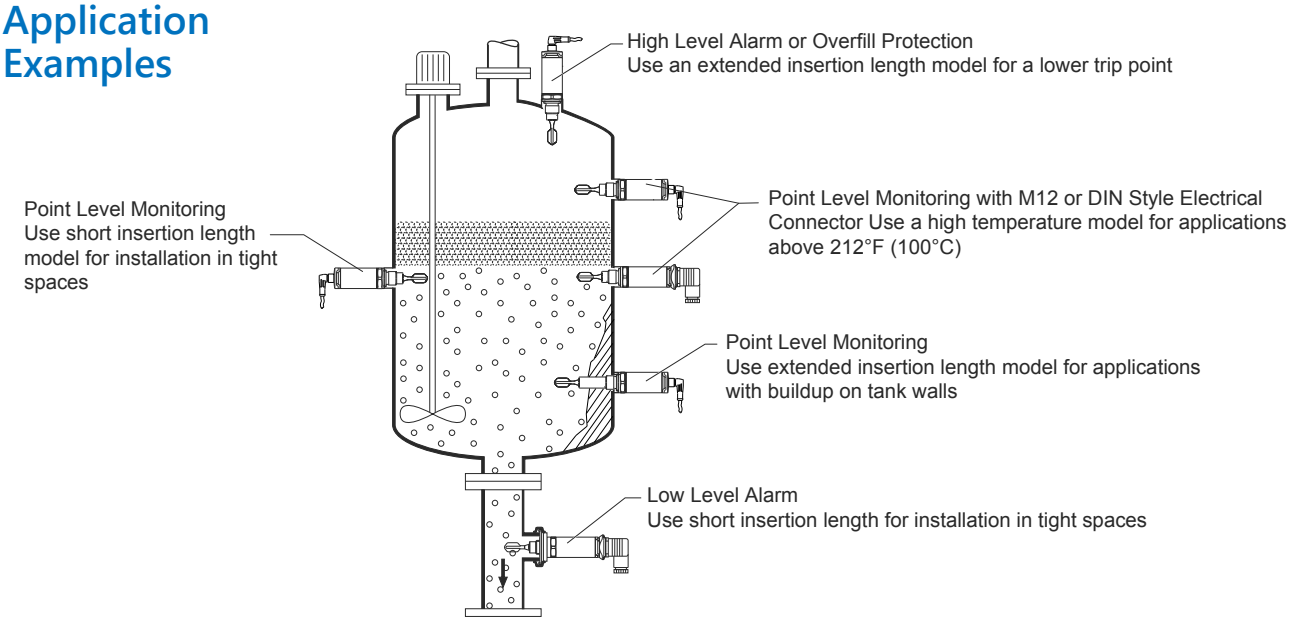
Altitude	Up to 2,000 m (6,600 ft) above sea level
Degree of Protection	IP65/67 NEMA Type 4X Enclosure (M12 connector) IP65 NEMA Type 4X Enclosure (valve plug)
Shock Resistance	a = 300 m/s² = 30 g, 3 planes x 2 directions x 3 shocks x 18 ms, as per test Ea, prEN 60068-2-27:2007
Vibration Resistance	a(RMS) = 50 m/s², ASD = 1.25 (m/s²)²/Hz, f = 5 to 2,000 Hz, t = 3 x 2 h, as per test Fh, EN 60068-2-64:2008
Electromagnetic Compatibility	Electromagnetic compatibility in accordance with all relevant requirements of the EN 61326 series and NAMUR recommendation EMC (NE21).
Approvals	
CSA	File# 600062
CE	EMC; LVD; RoHS II

Application Examples



ProSense® VFL Series Vibration Fork Liquid Level Switches

Wiring

The device has two operating modes: maximum safety (MAX) and minimum safety (MIN). By choosing the corresponding operating mode, the user ensures that the device also switches in a safety-oriented manner even in an alarm condition, e.g. if the power supply line is disconnected.

- Maximum safety (MAX)

The device keeps the electronic switch closed as long as the liquid level is below the fork. Sample application: overfill prevention

- Minimum safety (MIN)

The device keeps the electronic switch closed as long as the fork is immersed in liquid. Sample application: Dry running protection for pumps

The electronic switch opens if the limit is reached, if a fault occurs or the power fails (quiescent current principle).

Function Monitoring

Function monitoring with M12 connector

Using a two-channel analysis, function monitoring of the sensor can be implemented in addition to level monitoring, e.g. per relay switch, PLC, I/O module, ….

When both outputs are connected, the MIN and MAX outputs assume opposite states when the device is operating fault-free (XOR). In the event of an alarm condition or a line break, both outputs are deenergized.

AchieVe™ ELT Series Submersible Level Transmitters

Part No. ELT-005-L30

AchieVe Submersible Level Transmitters

The AchieVe ELT series hydrostatic submersible level transmitters provide continuous liquid level measurement by sensing the hydrostatic pressure produced by the height of liquid above the sensor and providing a 4-20 mA output signal compatible with PLCs, panel meters, data loggers, and other electronic equipment.

The AchieVe ELT series is a very economical continuous level sensing solution for water applications where overall small size, weight, and very low cost are required.

Features

- Very economical solution for water applications
- Three full scale ranges from 11.5 to 115.5 feet of water
- 4-20 mA output signal
- 1% Total Error Band accuracy
- Rugged 316L stainless steel construction
- Slim 0.825 inch diameter housing
- Polyethylene jacketed shielded cable with atmospheric vent tube

ProSense® GPLT/NFLT Series Submersible Level Transmitters

Part No. GPLT-005-L30

Submersible Level Transmitters

The ProSense GPLT and NFLT series hydrostatic submersible level transmitters provide continuous liquid level measurement by sensing the hydrostatic pressure produced by the height of liquid above the sensor and providing a 4-20 mA output signal compatible with PLCs, panel meters, data loggers, and other electronic equipment.

The ProSense GPLT series is a general-purpose continuous level sensing solution for water applications offering a slim housing diameter, several sensing ranges and cable lengths, integral lightning protection, and ratings for hazardous locations.

The ProSense NFLT is a non-fouling design continuous level sensing solution for waste-water applications featuring an extremely rugged Kynar sensing membrane with superior abrasion and puncture resistance that eliminates the need for large bulky shields for protection against floating particles and small objects. For added membrane protection in extreme applications or when extra stabilizing weight is needed, a user installed shield is available as an accessory. Several sensing ranges and cable lengths, integral lightning protection, ratings for hazardous locations, and a 0.5% Total Error Band accuracy are standard.

Available ProSense submersible level transmitter accessories include a desiccant drying tube, bellows, stabilizing weight, terminating enclosure, and protective spacer/shield for the NFLT series.

Part No. NFLT-005-L30

GPLT Series Features

- Ideal for general purpose water applications
- Six full scale ranges from 11.5 to 115.5 feet of water
- 4-20 mA output signal
- 1% Total Error Band accuracy
- Rugged 316L stainless steel construction
- Slim 0.825 inch diameter housing
- Polyethylene jacketed shielded cable with atmospheric vent tube
- Integral lightning protection
- Hazardous location ratings

NFLT Series Features

- Non-fouling design for waste-water applications
- Five full scale ranges from 11.5 to 69.2 feet of water
- 4-20 mA output signal
- 0.5% Total Error Band accuracy
- Rugged abrasion and puncture resistant Kynar sensing membrane with 316L stainless steel construction
- Slim 1.26 inch diameter housing without protective shield
- Polyethylene jacketed shielded cable with atmospheric vent tube
- Integral lightning protection
- Hazardous location ratings

Endress+Hauser
People for Process Automation

Waterpilot® FMX11 Hydrostatic Submersible Level Transmitters

Part No. FMX11-CA11DS06

Endress+Hauser Waterpilot FMX11 hydrostatic submersible level transmitters provide continuous liquid level measurement by sensing the hydrostatic pressure produced by the height of liquid above the sensor and providing a 4-20 mA output signal compatible with PLCs, panel meters, data loggers, and other electronic equipment. The Waterpilot FMX11 has a slim 22mm diameter stainless steel housing and a cap for protection of the sensor diaphragm making it ideally suited for freshwater applications. The shielded extension cable includes an atmospheric pressure compensation tube with Teflon filter and a tough abrasion-resistant TPE jacket that is UV-resistant. Accessories include a terminal box, additional weight and suspension clamp.

Features

- Ideally suited to freshwater applications
- Durable 316 SS construction for reliability and long life
- Shielded cable with atmospheric pressure compensation tube and Teflon filter
- Pre-calibrated ranges up to 2 bar (66.9 ftWC) to meet the most common submersible level applications in vented tanks, reservoirs and ground water systems
- ±0.35% accuracy for ranges ≥0.4 bar; ±0.5% accuracy for 0.2 bar range
- Environmental protection rating of IP68
- The Waterpilot FMX11 is cULus Listed and NSF Certified for drinking water applications

Applications

- Drinking water level in water towers
- Liquid level in vented tanks
- Groundwater wells
- Pump control
- River and lake water surface monitoring

Waterpilot® FMX11 Hydrostatic Submersible Level Transmitters

FMX11 Submersible Level Transmitter Specifications	
Accuracy	Sensor measuring range ≥ 400mbar: ≤ ± 0.35 % Sensor measuring range < 400mbar: ≤ ± 0.50 %
Long-Term Stability	≤ 0.1 % of URL/year
Wetted Materials	316L, POM, EPDM, TPE
Process Temp. Range	0 to +70°C (+32 to +158°F)
Thermal Error	Thermal change in the zero output and the output span: –10 to +70°C (+14 to 158°F): < (0.4 + 0.4 x TD)% of set span Temperature coefficient (TK) of the zero output and the output span: 0 to +70°C (32 to 158°F): 0.15 %/10 K of URL
Protection Rating	IP68
Input Voltage	8 to 28 VDC
Input Current	≤ 22mA
Output	4 to 20 mA
Output Resolution	4.88 µA
Output Impedance	727Ω at 24VDC
Mounting	Vertical
Circuit Protection	Overvoltage protection to EN 61000-4-5 (2kV asymmetrical)
Cable Jacket Material	TPE (Thermoplastic Elastomer)
Cable Pull Strength	500N (112.4 lbf) Max Cable extraction force (tensile force required to extract the cable from the probe): ≥ 400 N (89.92 lbf)
Number of Conductors	2 + 1 drain (shielded cable)
Conductor Size	0.22 mm²
Vent Tube	Teflon filter: External diameter of 2.5 mm (0.1 in), Internal diameter of 1.5 mm (0.06 in)
Agency Approvals	cULus, NSF, CE

Note: For Wiring and Installation information refer to the additional Vendor Operating Instruction PDF.

Waterpilot® FMX21 Hydrostatic Submersible Level Transmitters

Part No. FMX21-FE121DGB10A

Endress+Hauser Waterpilot FMX21 hydrostatic submersible level transmitters provide continuous liquid level measurement by sensing the hydrostatic pressure produced by the height of liquid above the sensor and providing a 4-20 mA output signal compatible with PLCs, panel meters, data loggers, and other electronic equipment. The heavy-duty Waterpilot FMX21 is ideally suited for wastewater applications, offering an easy-to-clean, flush-mounted, process-isolating sensor diaphragm; a rugged 42mm diameter stainless steel housing; and a diaphragm protection cap. The shielded extension cable includes an atmospheric pressure compensation tube with Teflon filter and a tough abrasion-resistant, low-density polyethylene jacket that is UV-resistant. Accessories include a terminal box, suspension clamp, and cable shortener.

Features

- Ideally suited for wastewater applications
- Durable 316 SS construction for reliable, long life in harsh environments
- Easy-to-clean, flush-mounted, process-isolating sensor diaphragm with protection cap
- Shielded cable with atmospheric pressure compensation tube and Teflon filter
- Pre-calibrated ranges up to 2 bar (66.9 ftWC) to meet the most common waste water submersible level applications
- ±0.2% accuracy
- Environmental protection rating of IP68
- The Waterpilot FMX21 includes FM hazardous location approvals for intrinsically safe applications

Applications

- Wastewater
- Lift station monitoring
- Liquid level in vented tank
- Landfill leachate monitoring
- Construction by-pass pumping
- Dewatering
- Pump control
- Slurry tank liquid level

FM APPROVED CE

**** If the cable is shortened or modified the FMX21 is no longer FM approved. The shortening kit should only be used when FM approval is not required for the device. To maintain FM the additional cable length should be coiled and secured.***

- To avoid moisture migration in the pressure compensation tube of the FMX11 and FMX21, the cable must be terminated in a dry room or terminal box. The terminal box accessory is IP66/67 rated and includes a GORE-TEX filter element providing both humidity and climatic protection even if installed outdoors.
- The additional weight accessory for the FMX11 helps prevent sideways movement of the sensor that can result in measuring error, or can make it easier to lower the sensor in a guide tube. The additional weight accessory does not fit the FMX21.
- The suspension clamp accessory provides for easy mounting of the FMX11 or FMX21. Simply secure the sensor cable between the clamping jaws and attach the suspension clamp to an appropriate fastening point.
- The cable shortening kit is used to easily and professionally shorten the FMX21 cable including the conductors and the pressure compensation tube. If the cable is shortened or modified the FMX21 is no longer FM approved. The shortening kit should only be used when FM approval is not required. The cable shortening kit is not suitable for the FMX11. Alternatively any extra cable length can simply be coiled and secured.

Micropilot® FMR10 Free Space Radar Liquid Level Sensor

Part No. FMR10-CAQBMVCEVEE2

Overview

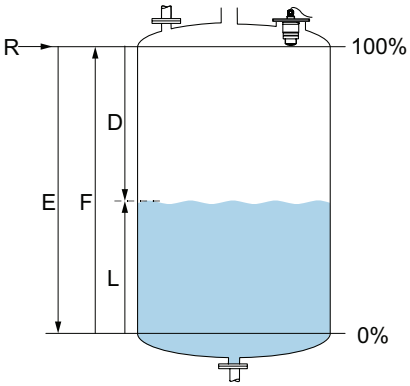
The Endress+Hauser Micropilot FMR10 pulsed radar liquid level sensor provides reliable, continuous, non-contact level measurement for liquids in storage tanks, open basins, pump lift stations, cooling towers, and canal systems. The Micropilot FMR10 can be configured to provide a 4-20mA analog output for liquid levels up to 8 meters (26.25 ft) or 12 meters (39.37 ft) when the flooding protection tube accessory is installed. Configuration and operation of the Micropilot FMR10 is accomplished using its Bluetooth wireless technology interface and the Endress+Hauser SmartBlue mobile app which, includes a linearization function that allows the conversion of the measured value into any unit of length, weight, flow, or volume. Envelope curves of the process can also be displayed and recorded using SmartBlue. The Micropilot FMR10 PVDF sensor body has 1-1/2" male NPT process connection threads and is IP66/68 and NEMA 4X/6P rated with hermetically sealed wiring and fully potted electronics to eliminate water ingress and allow operation under harsh environmental conditions. The Micropilot is powered from nominal 24VDC power and electrical connections are made via the 2-wire, unshielded, 10m (32 ft) cable. Available accessories include an adjustable mounting bracket for easy wall or ceiling installation, a protective sensor cover to protect from direct sunlight in outdoor applications, and a flooding protection tube that is required when the Micropilot FMR10 is installed in free space (not in an enclosed tank), a greater measuring range is required, or to ensure the sensor measures the maximum level even if it is completely flooded.

Features

- Pulsed radar level sensor for continuous, non-contact liquid level measurement
- 4-20mA analog output
- Liquid levels up to 8 meters (26.25 ft) or 12 meters (39.37 ft) with the flooding protection tube accessory installed
- Configuration and operation with Bluetooth wireless technology and the Endress+Hauser SmartBlue mobile app
- SmartBlue linearization function to convert the measured value into any unit of length, weight, flow, or volume
- Display and recording of process envelope curves with SmartBlue
- PVDF sensor body with 1-1/2" male NPT process connection threads
- IP66/68 and NEMA 4X/6P rated
- Electrical connections via the 2-wire, unshielded, 10m (32 ft) cable
- Nominal 24VDC powered

Operation

The Micropilot FMR10 is a downward-looking sensor that emits 26 GHz radar pulses towards the surface of the liquid and measures the length of time (time of flight) for the pulse to reflect off the liquid surface and return to the Micropilot sensor. Because the distance to the liquid surface is proportional to the time of flight, the liquid level above a known empty distance can be determined. Configuration of the empty distance and full distance, as well as other parameters, is accomplished via Bluetooth wireless technology and the Endress+Hauser SmartBlue mobile app.



Level calibration parameter

E	Empty calibration (= zero)
F	Full calibration (= span)
D	Measured distance
L	Level (L = E - D)
R	Reference point

With maximum radiated pulse power of 5.7 mW and an average power output of 0.015 mW, the Micropilot FMR10 is ideal for use in metallic and non-metallic tanks. Free space operation (not in an enclosed tank) is also possible when the flooding protection tube accessory is installed. When used in outdoor applications, the radar signal from the Micropilot is immune to cross-wind effects that can cause loss of signal for ultrasonic level sensors.

Optimal performance will be reduced by certain application characteristics that interfere with or prevent the Micropilot from receiving the pulses reflected from the liquid surface. In general, the following application characteristics should be avoided. Refer to the Micropilot FMR10 Operating Instructions for specific details regarding application, installation, and operation.

Application characteristics to avoid:

- Tank height < 1.5 m (5 ft)
- Open channel width < 0.5 m (1.6 ft)
- Media with bad reflective properties (Relative dielectric constant εr < 4)
- Agitated surfaces
- Foam layer
- Formation of buildup, particularly of moist products
- Heavy condensation
- Freezing of the sensor
- Obstructions such as limit switches, temperatures sensors, baffles, heating coils, liquid filling curtain, etc.

Nivector® FTI26 Capacitance Level Sensors

Part No. FTI26-CA7MWDG

Part No. FTI26-CA7MWDJ

Part No. FTI26-CA4VWDG

Overview

The Endress+Hauser Nivector FTI26 is a capacitance point level switch for detection of powders or fine-grained bulk solids. The versatile design of the Nivector makes it an ideal level switch for detecting the full, empty, refill, or point level status in silos, hoppers, and bins containing plastic granules, detergent, grain, sugar, spices, milk powder, animal feed, and other similar materials. The compact polycarbonate or stainless-steel housing with integral G 1" male thread process connection allows for easy installation in a variety of threaded adapters or through a bore hole using the optional lock nut accessory. The optional sensor protective cover accessory protects the sensor from abrasive or coarse product and can also be used to convert the G 1" sensor threads to 1-1/2" male NPT. Depending on the model, outputs include DC-PNP switches and IO-Link communication via an M12 quick disconnect or DIN style valve plug electrical connector. Factory configured to meet most applications; user specific adjustments are possible using the provided test magnet or IO-Link on equipped models. Color signal LEDs are provided for user specific adjustments and function verification (not on hazardous location rated versions), and hazardous location versions require M12 cable with LEDs for this function. Stainless-steel housing versions are FDA compliant and marked with the 3-A symbol for use in food industry hygienic applications when installed using appropriate hygienic fittings. Models are also available for use in Hazardous Locations with certifications to both US and Canadian standards.

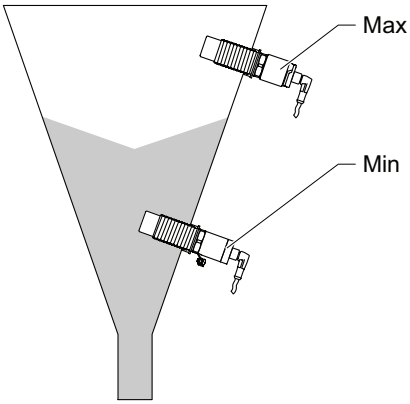
Features

- Capacitance point level switch for detection of powders or fine-grained bulk solids such as plastic granules, detergent, grain, sugar, spices, milk powder, animal feed, and other similar materials
- Full, empty, refill, or point level status in silos, hoppers, and bins
- Factory configured to meet most applications with user specific adjustments possible
- Compact polycarbonate or stainless-steel housing with integral G 1" male thread process connection allows for easy installation
- Available outputs include DC-PNP switches and IO-Link communication
- M12 quick disconnect or DIN style valve plug electrical connector
- Color signal LEDs are provided for user specific adjustments and function verification (not on hazardous location rated versions), and hazardous location versions require M12 cable with LEDs for this function
- Stainless-steel housing versions are FDA compliant and marked with the 3-A symbol for food industry hygienic applications
- Models available for use in Hazardous Locations
- Ability to set each output to detect different media (IO-Link models only)

Operation

The Endress+Hauser Nivector FTI26 capacitance point level switch is commonly used to detect the full or empty status in silos, hoppers, and bins containing powders or fine-grained bulk solids. When used as an empty status switch, it is typically mounted at an angled position near the bottom of the storage vessel to initiate refilling or turn off equipment for dry-running protection. When used as a full status switch, it is mounted near the top of the storage vessel to limit refilling or for overfill protection.

The sensor surface of the Nivector evaluates the different dielectric values of air and bulk solids. When the bulk solids come into contact with the sensor surface, the electronics change the switch status. An internal guard electrode eliminates interference factors due to the vessel wall or possible buildup of the medium.



There are two modes of operation:

- Maximum point level detection (MAX): e.g. Overfill protection. The Nivector keeps the electrical switch closed as long as the sensor is not yet covered by medium.
- Minimum point level detection (MIN): e.g. Dry running protection. The Nivector keeps the electrical switch closed as long as the sensor is covered by medium.

Choosing the MAX or MIN mode of operation ensures that the Nivector switches in a safety-oriented manner even in an alarm condition. The electronic switch opens if the point level is reached, if a fault occurs, or if the power fails.

Endress+Hauser
People for Process Automation

Nivector® FTI26 Capacitance Level Sensors

Configuration

The Nivector FTI26 is preconfigured at the factory to work with most applications without the need for an adjustment. The electrical switch point of the device is factory-set for medium with a particle size < 10mm and a relative dielectric constant ≥ 1.6 when installed in a metal tank using lock nuts, with or without the optional sensor protective cover accessory. For other types of installations, such as in plastic tanks, weld-in or tri-clamp adapters, medium with a dielectric constant <1.6, or processes with large temperature variations, measurement performance can be improved with user-specific empty and full adjustments using IO-Link on equipped models or the provided test magnet and signal LEDs, and hazardous location versions require M12 cable with LED's for this function. The test magnet can also be used to reset the Nivector to factory settings or carry out a functional test while in operation.

Liquipoint® FTW23 Capacitance Level Sensors

Part No. FTW23-CA4MWVJ

Overview

The Endress+Hauser Liquipoint FTW23 is a capacitance point level switch for detection of water-based liquids. The versatile design of the Liquipoint makes it an ideal level switch for detecting the full, empty, refill, or point level status in vessels, tanks, or pipes containing mineral water, milk, and various milk products, soft drinks, beer, and other similar water-based liquids. The compact stainless-steel and plastic housing with integral G ½", ¾", or 1" male thread process connection allows for easy installation and has an IP 65/67 protection rating. A more robust all stainless-steel housing version provides an IP 66/68/69 protection rating. Depending on the model, outputs include DC-PNP switches and IO-Link communication via an M12 quick disconnect electrical connector. Factory configured to meet most applications, individual adjustments for different liquids are not needed. Versions with IO-Link communication capability can be configured with two separate switching thresholds for medium detection and differentiation; and can also be adjusted to work with alcohol- and oil-based liquids, or even powders. Color signal LEDs are provided for function verification (not on IP69 rated versions). Liquipoint FTW23 level switches are FDA compliant and marked with the 3-A symbol (except versions with G ½" threads) for use in food and beverage industry hygienic applications and can be cleaned and sterilized in place (CIP/SIP) when installed in appropriate hygienic fittings.

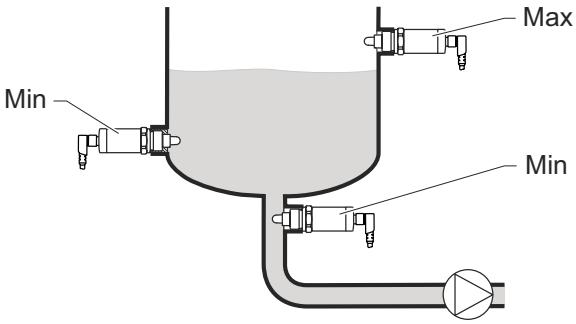
Features

- Capacitance point level switch for detection of water-based liquids such as mineral water, milk, various milk products, soft drinks, beer, and other similar water-based liquids
- Full, empty, refill, or point level status in vessels, tanks, and pipes
- Factory configured to meet most applications without requiring individual adjustments for different liquids
- Compact plastic/stainless-steel or all stainless-steel housing with integral G ½", ¾", or 1" male thread process connection allows for easy installation
- IO-Link communication versions can be adjusted to work with alcohol- and oil-based liquids, or even powders
- Available outputs include DC-PNP switches and IO-Link communication
- M12 quick disconnect electrical connector
- Color signal LEDs are provided for function verification
- FDA compliant and marked with the 3-A symbol for food and beverage industry hygienic applications (except versions with G ½" threads)
- Ability to set each output to detect different media (IO-Link models only)

Operation

The Endress+Hauser Liquipoint FTW23 capacitance point level switch is commonly used to detect the full or empty status in vessels, tanks, or pipes containing water-based liquids. When used as an empty status switch, it is typically mounted in or near the bottom of the storage vessel to initiate refilling or turn off equipment for dry-running protection. When used as a full status switch, it is mounted near the top of the storage vessel to limit refilling or for overfill protection.

The tip of the Liquipoint sensor evaluates the different dielectric values of air and water-based liquids. When the liquid comes into contact with the sensor tip, the electronics change the switch status.



There are two modes of operation:

- Maximum point level detection (MAX): e.g. Overfill protection. The Liquipoint keeps the electrical switch closed as long as the sensor is not yet covered by liquid.
- Minimum point level detection (MIN): e.g. Dry running protection. The Liquipoint keeps the electrical switch closed as long as the sensor is covered by liquid.

Choosing the MAX or MIN mode of operation ensures that the Liquipoint switches in a safety-oriented manner even in an alarm condition. The electronic switch opens if the point level is reached, if a fault occurs, or if the power fails.

Endress+Hauser
People for Process Automation

Liquipoint® FTW23 Capacitance Level Sensors

Configuration

The Liquipoint FTW23 is preconfigured at the factory to work with most applications without the need for an adjustment for different liquids. The electrical switch point of the device is factory-set for water-based liquids with a dielectric constant >20. Versions with IO-Link communication capability can be configured with two separate switching thresholds for medium detection and differentiation; and can also be adjusted to work with alcohol- and oil-based liquids, or even powders with a dielectric constant >1.5. A test magnet (not provided) can be used to carry out a functional test while in operation.

ProSense Float Level Switches

ProSense float level switches provide a low-cost general purpose solution for single point monitoring of liquid level in a variety of applications. Powerful permanent magnets within the float actuate a highly reliable and repeatable hermetically sealed reed switch as the float rises and lowers with liquid level. These switches are available in several different material constructions for compatibility with many types of liquids, a wide temperature range, and system pressure requirements. Vertical and horizontal mounting styles with several mounting thread variations are offered for ease of installation. Reed switches carry electrical ratings for both AC and DC voltage for adaptability to many control interface applications. These float switches are available with either normally open or normally closed operation, and most can be converted to the opposite operation in the field. Designed to be shock and vibration resistant, ProSense float level switches ensure long and trouble-free service.

Features

- Low-cost solution for general purpose single point liquid level monitoring
- Magnetically operated, highly reliable and repeatable hermetically sealed reed switch
- Vertical and horizontal mounting styles with a variety of mounting threads
- Several material constructions for compatibility with different liquids
- Electrical ratings for AC and DC voltage
- Most switches easily converted in the field from normally closed to normally open operation

Click on the thumbnail or go to https://www.automationdirect.com/VID-LE-0001 for a short video on ProSense Level Switches.

Operation

ProSense float level switches are shipped configured for normally closed switch operation. Except where noted, most models can be easily converted to normally open operation in the field.

Vertical Mount Switches

For Vertical Mount switches, normally closed is defined as the switch mounted in a vertical position with the mounting threads above the float (top mount) and the float in the "dry" position at the bottom of the stem (Figure 1). When the liquid raises the float, the switch will open.

To change the operation of the switch to normally open (depending on model), remove the C-clip, remove the float from the stem, flip the float 180 degrees, re-install the float on the stem and replace the C-clip. Now the switch will be normally open in the "dry" position and will close when the liquid raises the float.

Vertical Mount switches can also be mounted with the mounting threads below the float (bottom mount) as in the bottom of a tank. If bottom mounted, switch operation will be the opposite of top mounted installation described above.

Horizontal Mount Switches

For Horizontal Mount switches installed in the side of a tank (side-mounted), normally closed is defined as when the float arm is below and parallel with the stem in the "dry" position (Figure 2). When the liquid raises the float, the switch will open.

To change the operation of the switch, rotate the installed position of the switch 180 degrees so the float arm is above and hanging at an angle with the stem. Now the switch will be normally open in the "dry" position and will close when the liquid raises the float.

ProSense® Float Level Switch Kits

Brass

Stainless Steel

Float Level Switch Kits

ProSense float level switch kits provide the opportunity to fabricate in the field a customized two-float level switch with a maximum stem length of 36 inches (914.4 mm) using the supplied kit components. Level switch kits are available in two different material constructions for compatibility with different liquids.

Each kit is furnished with the following components:

- 2-inch NPT male threaded pipe plug with attached cuttable mounting tube
- Two additional cuttable connecting tubes
- Two floats
- Two SPST switch capsules that can function as either normally closed or normally open depending on float orientation
- Four compression unions
- One compression end cap

Assembly of ProSense float level switch kits generally involves the following steps:

- Lay out the supplied components in the required configuration
- Determine the lengths of the connecting tubes and cut them accordingly
- De-burr and smooth the sharp edges of the cut tubes prior to installation
- Perform a trial assembly and using a continuity indicator (light, buzzer, Ohm meter, etc.), verify that the switch actuation levels are at the required levels and the switch action (normally open or normally closed) is correct for the application.
- When switch set-up is satisfactory, tighten the fittings and apply thread sealant to the pipe threads on the top fitting before installing the switch into the tank.

Installation Example

ProSense® Float Level Tilt Switches

Float Level Tilt Switches

Float level tilt switches provide inexpensive, efficient and highly reliable level detection in open vessels, sumps and ponds.

The molded rubber float has an integral three-conductor cable and operates on a mercury-free micro-switch device that is located inside the float on an antivibration mount.

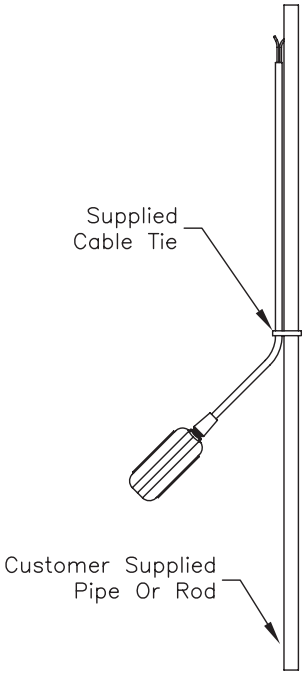
The rubber float is constructed of ethylene propylene diene (EPDM), a synthetic rubber with rigid and durable characteristics for long service life and resistance to heat, oxidation, ozone and aging due to weather. EPDM has good electrical resistivity, as well as resistance to solvents such as water, acids, alkalies, phosphate esters and many ketones and alcohols.

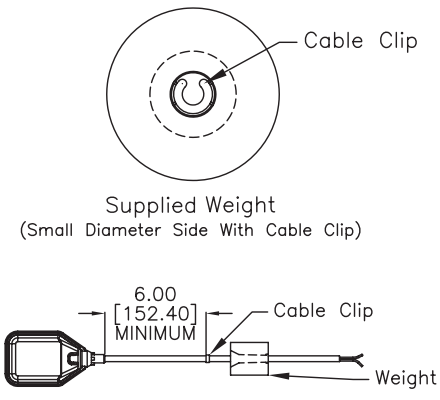
The basic operating principle is that as the fluid level rises, the float will rise, causing the microswitch to tilt and generate a signal that can be used to start or stop a pump, open or close a valve or actuate indicator alarms as required. Float travel is in an approximately ± 45˚ arc from its nominal position.

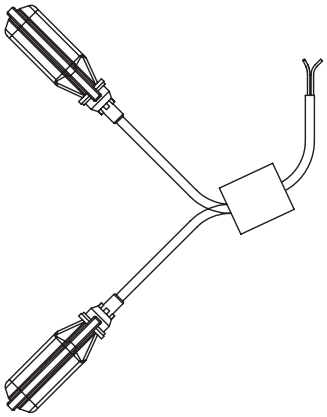
Features

- Low cost
- Easy installation
- Versatile application
- Mercury-free SPDT 16 amp switch
- 7 meter (22.9 foot) PVC jacketed cable

Installation Example







Float Travel is proportional to distance between float body and weight or anchor point.

Example 1: 6 inches between float body and weight will require 12 inches total float travel for proper opertaion of switch.

Example 2: 18 inches between float body and weight will require 36 inches total float travel to proper operation of switch.

Switch point is approximately ± 45 deg from horizontal at tethered or weighted point on cable.

ProSense® PLS Series Rotating Paddle Bulk Solids Level Switches

Part No. PLS-4P-1-24D

Part No. PLS-4P-R-24D

PLS-4P-1-24D shown with optional indicator light PLS-L24

Overview

The ProSense PLS Series is a rotating paddle point level switch for dry, granular bulk solids. Its robust and compact design makes the level switch an ideal sensor for detecting the full, empty, refill, or point level status in silos, hoppers, and bins containing bulk solids such as cereals, sugar, animal feeds, washing powders, chalk, dry plaster, dry cement, granulates, or wood chips.

The PLS Series is available with three different shaft lengths or a rope version that can be shortened in the field based on the application. The industry standard 1-1/4" male NPT threads and hinged paddle make installation easy in most any type of mounting fitting and storage vessel wall thickness.

Operating voltages of 115VAC, 230VAC and 24VDC are available and a SPDT relay output is provided for use as a PLC input or for direct control of bulk solids handling equipment. An optional switch status indicating light is easily field installed.

Models are available with Factory Mutual (FM) certification for Dust Ignition Proof, Class II, III, Division 1, Groups EFG applications.

Features

- Rotating paddle point level switch for dry, granular bulk solids
- 1-1/4" male NPT threads and hinged paddle make installation easy
- 100mm, 200mm, 300mm shaft lengths or 2000mm cuttable rope version
- Operating voltages of 115VAC, 230VAC and 24VDC
- SPDT relay output for PLC input or direct control of bulk solids handling equipment
- Optional switch status amber indicating light
- Models with Factory Mutual (FM) certification for Dust Ignition Proof, Class II, III, Division 1, Groups EFG
- Adjustable switching sensitivity can be set without tools and even during operation in non-hazardous areas
- Screw-cover housing with captive clear cap
- Optical shaft rotation monitoring for operational verification is visible with the device installed
- Switch testing function is easily performed using just a screwdriver
- Push-in style wiring terminals
- Housing can be rotated 360° for optimal alignment after installation
- IP66 environmental protection rating

CE FM APPROVED

(-HAZ Models)

Rotating Paddle Bulk Solids Level Switch Operation

The ProSense PLS Series of Rotating Paddle Bulk Solids Level Switch is commonly used to detect the full or refill (empty) status in silos, hoppers and bins containing bulk solids. When used as a refill switch, it is typically mounted at an angled position at the bottom of the storage vessel. When used as a full switch, it is mounted at the top of the storage vessel.

The shaft and paddle are driven using a reduction gear and synchronous motor. If the paddle is stopped by material covering it, the motor in the housing moves from the rest to the switch position. This movement operates two switch contacts; the first is for external level indication and the second switches off the power to the motor.

The paddle starts to rotate once the material level is no longer in contact with the paddle, the motor returns to its rest position and the two contacts switch to normal operation.

ProSense® PLS Series Rotating Paddle Bulk Solids Level Switches

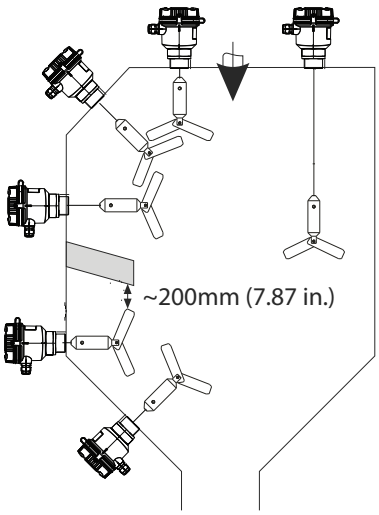
PLS Series Rotating Paddle Bulk Solids Level Switch Specifications	
Input	
Measured Variable	Level (in line with the orientation and length)
Measuring Range	The measuring range depends on the installation location of the device and the selected length of the shaft 100, 200, 300 mm (3.94 to 11.81 in) or the rope extension up to max. 2m (6.56 ft).
Output	
Output Signal	Binary
Switch Output[1]	Function: Switch a floating changeover contact (SPDT). Switching behavior: On/off Switching time: From paddle standstill until output of the switch signal: 20°, corresponds to 3.5 s Switching capacity: According to EN 61058: 250VAC 5E4, 6(2) A 24VDC, 3A Min. switching load 300mW (5V or 5mA minimum)
Power Supply	
Supply Voltage[2]	20 to 28 VDC 115 VAC 50/60 Hz 230 VAC 50/60 Hz
Power Consumption	Max. 3.5 VA
Terminals[3]	Terminals with spring terminal design Permitted cable cross-sections Rigid - 0.2 to 2.5 mm² (24 to 14 AWG) Flexible - 0.2 to 2.5 mm² (24 to 14 AWG) Flexible with wire end ferrule without plastic ferrule - 0.5 to 2.5 mm² (22 to 14 AWG) Flexible with wire end ferrule with plastic ferrule - 0.5 to 1.5 mm² (22 to 16 AWG)
Performance	
Shaft Speed	1 rpm
Sensitivity	Can be adjusted using an operating element accessible from the top Minimum: 80 g/l (4.99 lb/ft³) Depending on the density of the bulk solids adjustable in three stages: low, medium (default), high
Mechanical operating life	500,000 switching operations
Installation	
Process Connection	1-1/4" male NPT
Paddle Type	Hinged, foldable
Mounting Location	Vertical from the top Angled from the top From the side From the side with protective cover against falling solids From the bottom (device must be protected against shock-type loads) See Mounting Orientations Illustration for more detail Do not use: In direction of solids flow
Special Mounting Instructions	
Side Load on the Shaft	Max. 60N
Load on the Rope	Max. 1,500N
Operating Pressure (abs.)	0.5 to 2.5 bar (7.25 to 36.3 psi)
Housing Rotation 360°	To adjust to the direction of the cable entries (pointing downwards)
Cable Entries	The plugs delivered with the device provide dust protection during transport and storage. If a cable entry is not used the cable gland must be tightened around the included plug or an appropriately rated M20 x 1.5 blanking plug must be installed to maintain IP rating.
Mechanical Load of Signal Lamp (Optional)	The optional signal lamp must be protected against mechanical load (impact energy > 1 J).

[1] After a current >100mA is actuated, it is no longer possible to guarantee switching function with a switching current I <100mA.
[2] An overload protection element (rated current ≤ 10A) is required for the power cable.
[3] Use supply wires suitable for 10 °C (18 °F) above surrounding.

Mounting Orientations

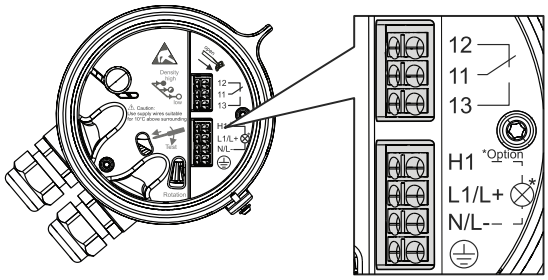


ProSense® PLS Series Rotating Paddle Bulk Solids Level Switches

PLS Series Rotating Paddle Bulk Solids Level Switch Specifications	
Process	
Process Temperature Range	–20 to 80 °C (–4 to 176 °F)
Process Pressure Range	≤ 1.5 bar (21.8 psi) overpressure (e.g. when silo is filled)
Solids Weight	≥ 80 g/l (4.99 lb/ft³)
Grain Size	≤ 50mm (1.97 in)
Environment	
Ambient Temperature Range	–20 to +60°C (–4 to +140°F)
Storage Temperature	–20 to +60°C (–4 to +140°F)
Climate Class	EN60654-1, Class C2
Degree of Protection	IP66
Shock Resistance	As per EN 60068-2-27: 30g
Vibration Resistance	As per EN 60068-2-64: 0.01g²/Hz
Electromagnetic Compatibility	Electromagnetic compatibility in accordance with all the relevant requirements of the EN 61326 series. - Interference immunity: as per IEC 61326-1, industrial environment - Interference emission: as per IEC 61326-1, Class B
Electrical Safety	Class I equipment, overvoltage category II, pollution degree 2
Altitude	< 2,000m (6,560ft) above sea level
Mechanical	
Housing	Polycarbonate (PC)
Captive Screw Cap	Polyamide (PA)
Cover Seal	Silicone
Housing Seal	Viton
Shaft	303 Stainless steel
Rope Extension	316 Stainless steel
Paddle	304 Stainless steel
Shaft Seal	NBR (Nitrile Butadiene Rubber)
Process Connections	PBT (Polybutylene Terephthalate)
Cable Entries	2 x cable gland, M20 x1.5 (optionally 1 x cable gland M20 x 1.5 and indicator lamp) Permitted cable diameter - 5 to 9 mm (0.2 to 0.35 in)
Approvals	
CE	The product meets the requirements of the harmonized European standards. As such, it complies with the legal specifications of the EC directives. The manufacturer confirms successful testing of the product by affixing to it the CE-mark.
FM (-HAZ Models)	FM Certified Dust Ignition Proof, Class II, III, Division 1, Groups EFG - Reference FM drawing PLS-4P-x-xxx-HAZ-DWG available at AutomationDirect.com

ProSense® PLS Series Rotating Paddle Bulk Solids Level Switches

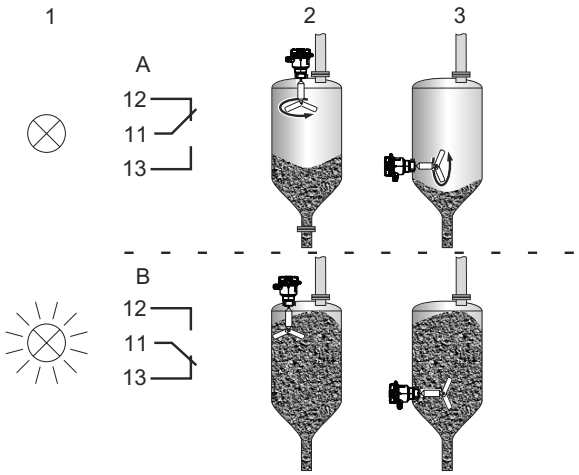
Wiring

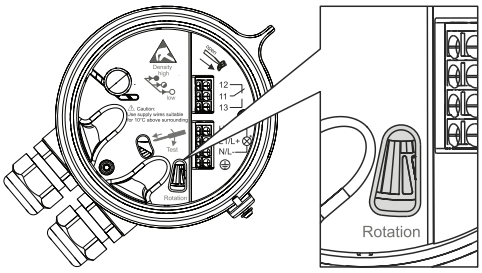


Symbol	Description	Symbol	Description
⏚	Protective ground	H1	Connections for optional PLS Series indicator light
N (AC) / L- (DC)	Power connection	N/L-	
L1 (AC) / L+ (DC)	Power connection	11	Changeover contact
		12	Normally closed contact
		13	Normally open contact

Switching States

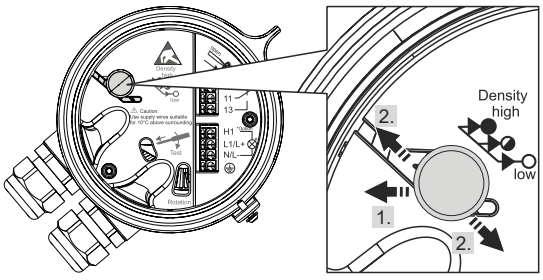
	1 = Indicator light (optional, not for -HAZ models)	2 = Full signaling	3 = Refill signaling	Shaft rotation	Internal light
A	OFF	OFF	ON	YES	ON
B	ON	ON	OFF	NO	ON





Rotational Movement Display

The ProSense PLS shaft rotational movement can be checked by visually observing the rotating disc in the lighted inpsection window through the clear cover.



Switching Threshold (Sensitivity)

The ProSense PLS switching threshold (sensitivity) is easily set to one of three settings depending on the density of the bulk solids.

Setting the switching threshold (sensitivity)

1. Move the operating element to the left until it can freely move up or down as illustrated.
2. Move the operating element to the desired position and let it move back to the right in the desired slot.
